GLOSSARY ..................................................................................................................................... 119
PREFACE

The purpose of this manual is the prevention of injury, suffering, or death that may occur as a result of poor planning or preventable incidents at public events.

This manual is intended to provide guidance for the management of risks associated with conducting events that involve mass gatherings of people and assist planners and organizers in making such events safe and successful.

Details of the development of the manual and other related matters are noted in the Background section of the Introduction. The manual was sponsored, edited, and published by the Federal Emergency Management Agency (FEMA).

FEMA has prepared this manual for use anyone planning or conducting a special event or mass gathering. This manual is intended to enable these people to become proactive in the planning for public events to ensure that adequate measures and systems are in place to prevent, reduce, and provide care for injuries, illness, and suffering which may occur.

Many people, in addition to health personnel, contribute significantly to the success of a public event. Therefore, FEMA anticipates that this manual will be distributed to event promoters, managers, public and private organizations, emergency service personnel, government bodies, and any individual or organization that contributes to the planning of events. Wide distribution is encouraged, providing individuals understand that the detailed contents of the manual are directed principally at managing the health and safety aspects of the event for all participants, officials, and spectators.

The manual is not intended to override any existing legislation or local emergency management procedures. Further, it does not seek to address the preparation of emergency response plans, but rather identifies the elements which should be considered by those responsible for planning and conducting events which attract large numbers of people.

Local governments and emergency services should be approached for more detailed advice on other aspects of planning and for the necessary permits and licenses required.
INTRODUCTION

BACKGROUND
Throughout the United States, at any given time of year, there are festivals, concerts, fairs, sporting events, and many other large and small events that gather or have the potential to gather large crowds. Under normal conditions, these events go on with little or no problems. However, when something goes wrong either as a result of a natural hazard or a man-made hazard, then local emergency management becomes involved.

Multiple deaths and injuries at large public events have occurred consistently and over a wide spectrum of countries and types of events. Certain, highly competitive sports events, particularly soccer, and rock concerts and festivals tend to produce spectator-generated incidents, while air shows and auto races tend to produce more participant-generated occurrences.

In some instances, advanced assessment of, and pre-planning for, these events failed to occur, or when it did, failed to identify the potential for disaster, or mitigating or coping strategies for a major incident.

With this in mind, FEMA conducted a focus group workshop in which participants discussed real pre-event planning problems for an upcoming event. The workshop focused on a number of major areas, which, either singularly or collectively, have intensified the problems inherent in mass crowd-intensive events. These issues included such aspects as physical layouts, spectator management, public safety, public health, and medical care.

The workshop was not geared toward large, often national events (though the planning principles still apply), but toward the more “routine” special events that communities host, such as parades, fairs, concerts, and air shows.

The participants focused on the impact an event, a non-routine activity, would have on a community’s resources. They placed emphasis not on the total number of people attending, but rather on the community’s ability to respond to the exceptional demands that the activity places on response services.

The purpose of having a pre-event plan in place is to reduce response times and better enable agencies to improvise because they have discussed contingencies beforehand. A pre-event plan defines roles and responsibilities in advance and creates ownership of potential problems for agencies involved in the process.

This manual is designed for a wide audience, encompassing the range of personnel with a role to play in the development of a special event plan. Participants include those who have a general awareness of their own roles but do not have a previous detailed or extensive
knowledge of special event planning. For example, the audience might include relatively new 
emergency managers, personnel from emergency operations organizations such as police, 
fire, medical services, and public works, and representatives from other community 
organizations—both public and private—for whom special event planning is not a regular 
responsibility.

SCOPE
The suggested guidelines in this manual have been developed from a number of sources, and 
most are applicable to a wide range of mass public gatherings. These sources focused on 
youth audiences attending large rock concerts and competitive sporting events because of the 
difficulties and major incidents historically associated with such events. Many of the 
guidelines derived from such experiences are applicable to a broad range of other events that 
present their own challenges.

Certain types of events have an inherent capacity for special management problems. While 
the general guidance given in this document remains applicable to these events, additional 
guidance is given for high-risk events in “Chapter 4: Special Planning for High-Risk Events” 
and for terrorist and criminal activities in “Chapter 5: Terrorism and Criminal Activities.”

In certain situations, such as visits by high-profile political figures or controversial activists, 
intensive security arrangements are necessary. Such procedures are outside the scope of this 
manual, and it would be inappropriate and counter-productive to provide details herein, given 
the wide and unrestricted distribution of this document. When such events occur, event 
planners must create liaison between emergency service personnel, health professionals, and 
appropriate security personnel to ensure that they address health, safety and security issues 
for the event.

SYNOPSIS
This manual covers a number of major areas, which either singularly of collectively, have 
historically exacerbated the problems inherent in mass crowd-intensive events. These areas 
include such aspects as physical layouts (including site, structures, and access), spectator 
management (including crowd organization, flow, and ingress/egress control), and public 
safety (including security, public health, and medical care).

Historically, advanced assessment of and pre-planning for an event failed to occur, or when it 
did, failed to identify the potential for disaster or mitigating or coping strategies in the event 
of a major incident.

Experience has proven that certain high-risk events, such as auto races and air shows, require 
particular planning in addition to the more generally applicable guidelines. This manual 
provides guidance for the particular planning of these high-risk events, as well as guidance to 
plan for terrorist and criminal activities.
Introduction

FEMA recognizes that no two events or situations are identical. While this document provides an approach to planning for and coping with special events, it does not provide guidelines that are universally applicable or without need of modification to the specifics of a particular event.

CHAPTER OVERVIEWS

Chapter 1 contains information concerning selection of the planning team, ordinances, regulations, and laws, and information concerning selecting a site for the event.

Chapter 2 concerns the risks and hazards that must be considered when planning an event.

Chapter 3 gives a basic overview of the Incident Command System (ICS) and how to use ICS in both the planning stage and when an incident occurs.

Chapter 4 discusses some of the considerations when hosting a specialty event that may be high risk.

Chapter 5 addresses terrorism and how to respond to terrorist threats and actions.

Chapter 6 explains the demobilization process and the importance of an After Action Report.

In the appendix at the end of the manual there are several checklists and tables to assist in the planning process.

Chapter 1
Pre-Event Planning
CHAPTER 1: PRE-EVENT PLANNING

INTRODUCTION

Planning any event is difficult. Planning for the potential risks and hazards associated with an event is even more difficult but essential to the event’s success. If you want those who attend an event to have positive memories of it, you need to keep several things in mind. This chapter covers the issues that you should address in the very early stages of planning or even when you are discussing promoting or sponsoring such an event. Before you schedule the event, you should consider the scope of the event or mass gathering, the risks to spectators and participants, community impact, and the emergency support required (personnel and logistics). You should also identify the lead agency and members of the planning team.

DEFINITION OF SPECIAL EVENT AND MASS GATHERING

What does or does not constitute a special event or mass gathering is difficult to determine. Instead, guidelines may be used to define it.

A focus group discussing special events and mass gatherings has identified a special event as a non-routine activity within a community that brings together a large number of people. Emphasis is not placed on the total number of people attending but rather on the community’s ability to respond to a large-scale emergency or disaster or the exceptional demands that the activity places on response services. A community’s special event requires additional planning, preparedness, and mitigation efforts of local emergency response and public safety agencies.

The focus group then defined a mass gathering as a subset of a special event. Mass gatherings are usually found at special events that attract large numbers of spectators or participants. Both special events and mass gatherings require the kind of additional planning identified in the previous quote. For example, an amusement park that attracts a large number of people is not considered a special event because large crowds are expected. A mass gathering does not imply that the event is a special event. Failure to prepare for all contingencies can lead to disastrous consequences.

This manual is not intended to offer preparation planning for large national events, but for the more traditional community events, such as parades, fairs, concerts, and air shows, and festivals. However, both types of events require the same kind of careful planning.
The title of this manual is **Special Events Contingency Planning**. What do we mean by contingency planning and where do we start? What distinguishes this level of planning from traditional public safety planning?

The first concern with contingency planning is to identify times when the event may place strains on the existing public safety agencies. Even in the earliest stages of planning, you should begin also to make contingency plans. These plans should consider licensing and regulations, emergency response issues, identifying persons responsible for particular types of hazards and risks, resources and expenses, and jurisdictions. Planning ahead reduces stress for organizers and promoters during the event, should an incident occur which requires public agencies to work together.

During the initial planning stages, each agency should review resources to ensure all necessary equipment is available. If the agencies determine any additional equipment is needed then they may acquire the equipment or supplies and be ready for the event. One way for communities to acquire equipment is to work together or pool equipment.

One way agencies work together is by adopting a program known as local mutual aid. This program allows neighboring communities to pool resources and share liability for damages or loss of equipment. If one community needs a particular piece of equipment, they may borrow it from a neighboring community. It will become an asset of the borrowing community and covered under their insurance until it is released and returns to its home organization. It is important that those involved in planning the event know the agreements established between neighboring communities and the assets available to assist in responding to any unforeseen incidents.

**PLANNING MEETINGS FOR SPECIAL EVENTS/MASS GATHERINGS**

**Planning Team Identification**

In general, planning a special event or mass gathering should begin well in advance of the event. One of the first steps to planning an event is to bring together those who are hosting the event with those responsible for the public safety within the community. A multidisciplinary planning team or committee should be comprised of the promoter or sponsor and any agency that holds a functional stake in the event (e.g., emergency management, law enforcement, fire and rescue, public works/utilities, health inspection, etc.). With all these agencies present, a risk of confusion in matters of leadership is obvious. We discuss the nature of this risk in Chapter 3: Incident Command and Control. Thus, the lead agency should be identified early on. In some communities, the lead agency for public safety planning is the emergency management agency. Consequently, emergency management should typically lead the way in coordinating the event planning effort.

Some communities already have planning protocols or systems in place. If your community has an existing plan that has already proved successful, do not start from scratch; simply change or modify the plan where needed. The incident command system (ICS) is a
management system frequently used to effectively manage large events. As such, event planners should consider using ICS throughout the planning process. It seems logical that the “Incident Commander” be a representative of the lead agency. It also seems logical this representative lead the planning team or committee.

All involved agencies need to participate on this Planning Team from the outset in order to ensure a successful and safe event. At its initial meeting, the Planning Team should develop its mission, objectives, and determine the necessary components of the public safety plan. For example, what elements are within the realm of the promoter and what are within the realm of the public safety agencies? The Planning Team should also develop its structure using ICS as a model (that is, section chiefs, and/or subcommittees, as needed). Additionally, the Planning Team should consider the promoter’s or sponsoring organization’s purpose and experience, risks (including crowd, staffing, food and shelter, parking, transportation, medical facilities), previous event concerns, relevant local concerns, weather, and community impact.

**Pre-event planning matrix**

At subsequent meetings, the Planning Team should identify all of the major functions and responsibilities required by the event and assign appropriate agencies to manage each function or responsibility. Since responsibilities vary from jurisdiction to jurisdiction, it is most effective to assign responsibilities consistently to avoid duplication and promote efficient response to problems that may arise. The pre-event planning matrix (below) is designed for you to choose the risks, hazards, or functions that are likely to be required by an event, and assign each to a primary agency (P) or a secondary or support agency (S). The functions and responsibility assignments must be discussed and decided in the planning stages, not when an incident occurs. Additional room is provided in the matrix to add agencies or risks/functions as they may apply.
Since responsibilities vary from jurisdiction to jurisdiction, certain risks or hazards are not consistently handled by one agency. This matrix is designed for you to chose the risks and hazards your agency is accountable for handling and then go to the corresponding page in the Job Aid manual. If more than one agency is tasked to respond to the risk or hazard, some overlap of responsibility may occur. One way to handle this is to place a number 1 in the primary agency position and a number 2 in the agency that provides support’s position. The responsibilities of each agency must be discussed and decided in the planning stages, not when an incident occurs. Additional room is provided in the matrix to add agencies or risks as they may apply.

Pre-Event Planning

Promoter/Sponsor(s)

The promoter or sponsor must be involved in all phases of planning to ensure a successful event. Often the promoter is interested in monetary gain more than he or she is interested in public safety. If this appears to be his or her primary goal, local agency participation is essential. You may encourage the promoter to cooperate by linking attendance at planning meetings with the permit process and issuance. For example, the permit to host the event may require the promoter’s presence at the initial planning meeting. Teamwork promotes successful events.

One way to ensure public safety at an event is to follow relevant laws or regulations of the community. Following these laws and regulations ensures that the promoter will keep the public’s safety at the forefront of all plans. Some communities or states have public agency regulatory oversight of the promoter built into the permit process. For example, the community may have a requirement for the promoter to have adequate contingency plans in place before approving an event.

Relevant Laws or Regulations

Event promoters must usually gain approval from local and sometimes even state, authorities to hold public events. The following information should be available to the promoters before beginning the permit-approval process:

- Identity of the approving authority and any other authorities actively involved in the approval process;
- Relevant statutes, ordinances, codes, and standards existing for mass gatherings;
- Documentation required to support their application; and
- Relevant deadlines for the filing of applications.

Some communities offer a “One Stop Shopping” concept for permitting. The person requesting an event completes applications at one place and the information is forwarded to the appropriate agencies for their approval. The person requesting the event does not have to track down the appropriate agencies to make a request. This also ensures all required agencies are notified and considerations are made before the permit is issued.

Promoters should be aware of the approving authority’s timetable for approving events and issuing permits and should include any potential delay in the event planning schedule.

As a condition of granting approval, promoters may be required to provide feedback on the approval process and submit an evaluation before, during, and after the event, as needed. Promoters may be required to give feedback in the form of a debrief or a report to relevant authorities.
Pre-Event Planning

Legal Issues
Some form of legislation usually governs or restricts public events or aspects of them. Some events, particularly extremely large or high-impact events, require special state or local legislation. Local ordinances provide health and medical guidelines.

Promoters should consider obtaining legal advice early in the planning stage. Items that warrant consideration include:
- Liability for injuries;
- Liability for acts or omissions;
- Liability for financial obligations incurred in responding to major emergencies occasioned by the event; and
- Potential liability for the resultant effects of the event on normal emergency operations.

Permits will be required for parades, the sale and consumption of alcohol, and the sale of food items. Fire safety inspections are also required. Permission may also be required if it will be necessary to close certain adjacent or peripheral roads or streets. A permit may be required for the mass gathering itself.

Most public sector agencies have adopted a “User Pays” policy for services provided at sporting and entertainment events. The purpose of this policy is to improve the allocation of statute resources in the general community by providing a means of charging for services deployed to plan for, and respond to, sporting and entertainment events. Event promoters should consult local and state authorities to determine relevant fee structures and charges for services provided, including payment of overtime costs for personnel.

Promoters may be required to post a bond or provide liability insurance to cover the costs of response to emergencies, subsequent venue clean up, traffic and crowd control, and other policing functions.

The head of the planning team must monitor progress made in satisfying all legal requirements throughout the planning stage of the event.

Political Issues
Often communities have to deal with local political considerations when they plan events. No specific advice can be given to the promoter except to warn him or her that political considerations are always important to the local community. Often a way to encourage elected political officials to support an event is to show the monetary or quality-of-life impact a successful event would have on their communities or careers. Explaining the positive impact encourages them to support the public safety coordinators by providing adequate local resources and funding.
EVENT CANCELLATION OR POSTPONEMENT

From time to time, you may need to cancel, postpone, or interrupt an event. If a crowd has already gathered, these actions have the potential to create dangerous crowd reactions. Have plans in place to appropriately manage an angry crowd and to address the possible readmission of patrons to the venue.

One major area to consider is authority to cancel or postpone an event. During the planning phase, the promoter and the planning team must discuss who has the authority to cancel or postpone an event as well as when and under what conditions the event can be postponed or cancelled. These decisions must be made before the event begins, and everyone must know who has authority. ICS is an excellent command system to ensure chain of command and proper approving authority.

Site
You may need to consider a number of alternative venues for an event. Emergency managers may be able to recommend appropriate venues based on health and safety considerations.

Finding a suitable venue or set of venues can be difficult. Answering the following questions during the planning stage can aid in the selection of an appropriate event site:

- Will staging the event require multiple venues?
- Is this kind of event normally conducted at a fixed facility?
- Will a fixed facility be used in ways that may not be considered normal for that facility?
- Is the event regularly conducted at a temporary venue?
- Is the event a “one of a kind” project at a temporary venue?
- What services/utilities are available at the venue?
- What additional services and utilities will be required at the venue?
- Is there a need for backup services or utilities?
- What shelter facilities are available at the following locations:
  - Transport pick-up and drop off areas,
  - Spectator and official viewing areas,
  - Seated eating areas,
  - Pedestrian thoroughfares,
  - First aid and medical centers, and
  - Competitor and officials marshaling areas?

- What is the duration of the event, and will it continue during the hours of darkness?
- Have you provided for the needs of people with disabilities?
- Does the date of the event conflict with other events to be conducted in the area?
- Will seasonal weather require any special contingency planning?
- Have you surveyed the proposed site (particularly outdoor sites) for inherent hazards associated with location, and have any been identified? Do utility lines that could be
brought down by a severe storm traverse the site? Is the site adjacent to a waterway prone to flooding?

- Is the site layout such that, in the event of a mass casualty incident, space is available for an onsite triage area to permit stabilizing medical treatment before critical patients are transported to local health care facilities? Is such an area accessible to ambulances to eliminate the need for carrying patients long distances?
- Does the site allow for adequate crowd regulation by means of, for example, existing regimented seating areas or flow barriers?
- Are spectator overflow areas available to prevent crowd crush should spectator turnout significantly exceed expectations, a common phenomenon at rock concerts?
- In an urban setting, as is characteristic of a stadium venue, could the adjacent streets on all sides be closed to other than emergency, service, and resident vehicles, creating a perimeter for access as well as a buffer zone?

**Criminal and Terrorist Risks**

Each city leader must view his or her community as a target for acts of terrorism and crime. The threat is increasing daily. Often, the more unprotected sites become targets because of their accessibility. For example, terrorists attacked the Federal Building in Oklahoma City because it was vulnerable. Small communities may actually be attractive sites for terrorists because the residents believe they are not at risk and so do not prepare themselves. However, small communities can take steps to prepare for the same risks all communities face.

Prepare public safety personnel to protect themselves. In Tokyo, during the gassing incident in the subway system, responders became ill as a result of their efforts to rescue the original victims. Teach your community’s public safety personnel to protect themselves as they help others.

Some events may appeal to terrorists for a number of reasons, including an anniversary date, a particular location, the nature of the event, or those who will be included among the participants. Communities can identify terrorist organizations that may be attracted to their event for any number of reasons and can prepare accordingly. Knowledge is an advantage. Know the possible risks the event poses and the audience such an event will attract. Ensure that your public safety teams are prepared and have practiced their response to terrorism, and suspected terrorism, and that they understand how to mitigate any potential terrorist incidents.

When safety and security professionals formulate contingency plans for potential terrorist incidents, they should work together with state or federal law enforcement intelligence units. Local law enforcement professionals should consult the FBI and state law enforcement intelligence specialists.

**Extremist or Single-Issue Groups**

If organizers anticipate that a mass gathering or special event will attract the attention of organized groups, they should meet, if possible, with the leaders of these groups in advance. The organizers and group leaders can discuss ground rules of acceptable behaviors and the
anticipated public safety response to criminal or disruptive behavior by local law enforcement. Building rapport by gaining a mutual understanding of what to expect can decrease the likelihood of disruptive behavior, or at least ensure that everyone knows what will and will not be tolerated.
Chapter 2
Risks and Hazards Analysis
CHAPTER 2: RISKS AND HAZARDS ANALYSIS

INTRODUCTION

While planning an event, it is important to consider every possible risk and hazard that may occur. This chapter covers most of the basic risks found at an event. The responsibilities for these risks vary with each jurisdiction, and every community needs to have a plan listing who or what organization will respond to the anticipated risks or hazards. Knowing the risks ahead of time and planning for those risks are essential to successful planning. Planning for the worst may help reduce the chance of “worst-case scenario” happening. If the responding agency knows the risks ahead of time and is alert, it can reduce its response time, ensuring the safety and security of those in attendance. Risks vary depending upon the type of event; therefore, event organizers must tailor planning for each risk to the specific event.

The promoter is one source of information on potential risks faced at the event. The promoter should be aware of the support services needed to respond to any incident and the availability of those services in the community. If event organizers know the possible risks an event poses and the nature of the audience likely to attend the event, they can analyze the hazards and take necessary steps in planning a safe event.

HAZARD ANALYSIS

Hazard analysis provides planners with information about the kind of emergencies that may occur and potential consequences. Analysis assists planners in deciding what steps to take to prevent the possible hazard and how to respond if an incident occurs.

The best way to begin a hazard analysis is to list the possible risks present at the event. Every community’s list will differ based on topographical and geographical features, weather patterns, and other factors. (Tsunami, for example, would not be identified as a hazard in an area that is far from a coastline.) Identifying hazards also includes considering the possibility of a secondary hazard (for example, a tornado may lead to power failure, loss of water, and other hazards).

The following table includes some of the more obvious risks and possible hazards that may occur. Being prepared for the worst allows planners to have responders and supplies on hand if a hazard does occur.

Risks and Hazards Analysis

Event planners must identify characteristics of each possible hazard to determine the risk and consequences. Characteristics to identify are:

- Frequency of occurrence—the frequency of occurrence (both historical and predicted) for each hazard in the particular jurisdiction;
- Magnitude and intensity—the projected severity of the hazard’s occurrence;
- Location—the location of the hazard, if the hazard is associated with a facility or landscape feature;
- Spatial extent—the geographic area expected to suffer the impact of the hazard (either around the known location of a hazard or as an estimate for non-localized hazards such as tornadoes);
- Duration—the length of time the hazard may be expected to last;
- Seasonal pattern—times of the year when the hazard threat exists (based on month-by-month historical occurrence); and
- Speed of onset and availability of warning—the amount of time projected between first warning (if any) and actual occurrence.

Potential Consequences

To determine potential consequences of a hazard, estimate the lives, property, and services at risk. Evaluate the extent of the hazard by closely examining your community in terms of:

- People (deaths, injuries, and displacement),
- Critical facilities (days of service loss, repair time),
- Community functions (disruption),
- Property (damage, destruction, cost of replacement or repair), and
- Potential secondary hazards (dams, chemical processing plants).

When evaluating hazards, remember that hazards may occur in multiples and that one hazard may cause a secondary hazard.

Steps in Hazard Analysis

1. Identify the Hazards
   Determine what kinds of emergencies have occurred or could occur in the jurisdiction.

2. Profile Hazards and Their Potential Consequences
   Compile historical and predictive information on each of the hazards and overlay this information on community data to estimate the hazard’s potential impact on the community.

3. Weigh and Compare the Risks
   Determine the relative threat posed by the identified hazards, using qualitative and quantitative ratings. This information enables the planners to decide which hazards merit special attention in planning and other emergency management efforts.
4. **Create and Apply Scenarios**
   For the top-ranked hazards (or those that rate above a certain threshold), develop scenarios that raise the hazard’s development to the level of an emergency. This is a brainstorming activity that tracks the hazard from initial warning (if any) to its impact on a specific part of the jurisdiction and its generation of specific consequences. Brainstorming provides information about what actions and resources might be required for response.

After you identify hazards and assess risks, you should order the risks by priority and develop strategies to deal with each hazard.

**CONTINGENCY PLANS**

Unfortunately, not every event runs smoothly. Often, incidents occur that are beyond the control of the planning team. Therefore, contingency plans for every event should be in place.

An emergency response plan requires a comprehensive hazard and vulnerability analysis. Consultation among all parties who may respond to an emergency situation during the event is essential.

Some important questions related to Incident Command System planning include:

- What weather conditions may require cancellation of the event?
- What weather conditions will postpone the event?
- How will storm warnings be monitored?
- What plans are in place for sudden, severe weather conditions, such as tornadoes? Will shelters be available?
- Who has the authority to make these decisions, and at what point do they exercise that authority?
- How is notification made of a cancellation or postponement?
- Are additional security personnel, including police, on standby or on call should an immediate increase in these services be required?
- Have you advised ambulance services and local hospitals of the nature of the event, provided an expected spectator profile, and estimated potential medical problems?
- Have you notified fire and rescue services of the nature of the event and identified the services that might be required?
- Have you identified the types of heavy equipment that could be required in a catastrophe (for example, a grandstand collapse)? Have you made plans to obtain that equipment at any time, including off-business hours?
- Have you advised counseling services of the nature of the event and identified the services that might be required?
Risks and Hazards Analysis

- If the event is particularly dangerous, and deaths are a real possibility (for example, at automobile or power boat races or air shows), have you formulated plans to support any required coroner’s investigation?
- In order to permit responders to precisely identify the location of an emergency quickly, address the following questions:
  - Will a grid-type venue plan be available, which is common to all emergency services, including access roads, pathways, major landmarks, spectator, performer and vendor areas?
  - Will vendor locations or booths be numbered and be included on the venue plan?

STRUCTURAL MATTERS

An area of great concern is the physical set up of the event. Planners need to consider what performance facilities are needed, what special structures are needed for indoor or outdoor events, and whether temporary structures can be used. These are just a few primary concerns.

Stages, Platforms, and other Performance Facilities

When setting up an event, stages, platforms, and the other performance facilities are an area of major safety consideration. The type of event and its site affect the choice of performance equipment and its stability requirements. Qualified inspectors should perform some type of inspection to ensure the structure is appropriate for the event and that the structure is safe.

The expected behavior of the crowd is one of the principal factors determining stage configuration. While classical music and ballet performances usually attract a mature and orderly audience, teenage and pre-teen fans at rock concerts have been known to storm the stage in order to touch their idols. Such incidents, apart from being disruptive, have caused injuries. Therefore, event planners should understand the emotional and physical character of the audience that a particular performance will attract.

There are three principal ways to gather information about the anticipated crowd:

- Review press reports and contact local public safety officials who were present at previous performances;
- Speak with spectators who have attended adolescent entertainment events such as rock concerts (in the past, spectators have provided valuable insights into what behavior authorities might expect from audiences for different entertainers); and
- Check with the promoter to determine audience behavior at past events and the type of crowd and their behavior that can be expected.

Stages are usually elevated to provide the audience a better view of the performance, especially for spectators who are farther back. This elevation is itself a barrier to those who would rush the stage in an attempt to touch a performer. In addition, this increased height can
create an area free of spectators at the base of the stage because the audience will position themselves back from the stage so that their line of sight is not impeded.

At some venues first aid personnel are located under the stage to accept injuries occasioned at the front of the spectator area. However, a stage or a platform alone is usually insufficient to deter determined and agile spectators, and an additional physical barrier is needed in front of the stage.

**Indoor Events**
During concerts held indoors, an effective practice is to erect a “V” shaped barrier in front of the stage to deflect patrons away from the stage area should any surge come from behind. The “V” shape also provides an additional barrier to prevent spectators from reaching the stage. Security staff can position themselves in this spectator-free zone or should be able to gain access to it quickly from either end of the stage.

Barrier posts must be securely anchored to the floor, not merely mounted to freestanding bases. They should also have some padded protection. Such a fence construction is usually engineered to provide a certain amount of “give” upon impact, thus reducing the potential for crush injuries as occasioned in the 2000 Denmark, Pearl Jam concert tragedy.

**Outdoor Events**
Board fences similar to the “V” shaped barrier described for indoor concerts can be used in an outdoor setting. Board fences have the added benefit of providing a walk space on the spectator side of the fence as well as behind it. Because most outdoor concerts do not provide seating, spectators in the front rows seated on the ground have to take a position several yards back from the fence to permit them to see the stage over the top of the fence. This area permits emergency access to the front rows of spectators.

Any stage protection barrier must be designed to sustain a certain amount of flex in order to prevent the crushing of spectators in the front by a crowd surge from behind. At the same time, it must be sufficiently solid so that it will not collapse and cause injuries. Fences installed as stage barriers often fail to meet this two-fold requirement.

**Break-Away Stage Skirts**
The front skirt around the base of a stage can be constructed to break away under the pressure of a crowd surge, thus allowing spectators to be pushed under the stage rather than be crushed against its base. However, this idea is not practical where there is less than six feet clearance beneath the stage because of the potential for head injuries should a spectator collide with the leading edge of the stage.
It should be stressed that use of a breakaway stage skirt does not remove the requirement for a barrier in front of the stage and should be considered only as additional security if barriers fail.

**Temporary Structures**
Due to their transitory nature, many events require easily constructed temporary structures. These include the stage platform itself, as well as towers to house speakers and floodlights, temporary seating such as bleachers, dance platforms, roofs, towers and masts, viewing platforms, marquees and large tents, and decorative items such as archways, overhead signs, and even sideshows.

All such temporary structures must be designed and erected to include a margin for safety and a view to potential hazards. A local government building-codes inspector should supervise the erection of temporary structures and ensure that they conform to local government building or engineering specifications.

Temporary structures are often hurriedly erected since access to the venue may be permitted only a short time before the event opens and they are usually designed for rapid removal at the conclusion of the event. In addition, these temporary structures are frequently neither designed nor erected to withstand stresses other than from intended use and are therefore not engineered to incorporate safety features. High winds or spectators climbing for a better vantagepoint can overstress these structures. A number of accidents have occurred in the past when such poorly designed or constructed structures are stressed in these ways.

Personnel should inspect temporary structures periodically during events of long duration. They should post warnings on or close temporary structure whose intended purpose is being violated.

**Load Capacity**
All structures have load capacities, and precautions should be in place to prevent misuse through overloading. Any viewing platform or vantagepoint, such as a building verandah or balcony, can cause a major incident if the number of spectators upon these structures is not properly controlled.

The bases of temporary structures must be protected from damage by vehicular traffic through the use of designated buffer zones.

**Seating**
Ideally, all seating should be reserved; however, this desire may be difficult to achieve at outdoor events.

If most of the spectators are 16 years old or younger, provide seating to control surges and crushing at the front of the stage. A security presence to ensure that audience members do not stand on seats is also recommended. Seating should be adequately anchored to prevent its movement.
Another area of concern is the spacing of the seats. The seating should be spaced far enough apart to allow emergency crews access to patients. Often grouping the seats and providing large walkways between the groups is a way to do this.

**Temporary Seating and Anchorage**

Seating in a community center, arena, or similar indoor location often combines fixed perimeter seating with additional foldable or stackable seating on the central floor.

Temporary seats are often not secured to the floor or to one another. While this may not present any problems with ordinary audiences, more enthusiastic spectators may pose the following problems:

- Persons standing on the seats for a better view are prone to injury because they may lose their balance or be jostled. In such instances, they can adversely affect other spectators, sometimes causing a “domino effect” in closely spaced chairs. The potential for a significant number of injuries exists; and
- If an audience becomes hostile, portable chairs can be used as dangerous missiles. It is not uncommon for hostile fans to become aggressive and throw items. Seats not anchored become dangerous projectiles.

Portable, folding, or stacking chairs should be secured to the floor. Where this is not possible, attach the legs of each row of chairs to two long planks, one running under the front pairs of legs and one running under the back, as an alternative solution.

**SPECTATOR MANAGEMENT AND CROWD CONTROL**

We have shown the hazards associated with structural design and integrity, but what about the dangers created by the participants themselves? The aim of spectator management and crowd control is to maintain order, prevent deviation from desired behavior, and re-establish order should it break down, thereby ensuring maximum enjoyment for the assembled gathering. Event organizers are responsible for spectator management and crowd control; however, this function passes to local authorities, such as police, fire, and emergency medical services, when the situation is beyond the resources and capability of the organizers. Knowing what to expect can lessen risks and hazards from the crowd itself. Event organizers must have an intelligence plan in place before the event happens.

Spectator management refers to planning and preparation issues, such as ticket sales and collection, ushering, seating, parking, public announcements, toilets, and washrooms.

Crowd control refers to mechanisms used to re-instate order, such as limited access control, admission control, and arrests.
A crowd is defined as any number of people coming together in any place for any reason. Crowds gather daily in shopping centers, airport, and stadiums and occasionally in places not designed specifically for large numbers of people.

In the planning process for a forthcoming event, organizers must have an understanding of both individual and crowd dynamics and how these elements interrelate. We offer an incomplete guide to crowd control problems that organizers most frequently encounter. The issues need expansion for each crowd and venue. You may find additional information on crowd control in other literature and press reports; from the promoter; private security organizations; police, fire, and emergency medical authorities; and, for visiting dignitaries, from personal security services and government agencies. All this information will assist in predicting potential problems that you can then address in the planning process.

**General Issues for Consideration**

Major crowd issues you should address include:

- **Size** - Maximum numbers permitted are often established by regulation for safety reasons;
- **Demographics** - Consider the composition of the audience, including age and gender mix. If you identify in advance that young children will constitute a high proportion of the audience, consider additional facilities, such as childcare, family bathrooms, and rental strollers. Audiences made up of young children or elderly people tend to require additional medical facilities, and children and the elderly are more susceptible to crush injury than teens or adults.

Different kinds of events may attract certain types of spectators that require special attention. Consider the following:

- Rock concerts may experience a higher incidence of problems with drug and alcohol abuse, underage drinking, and possession of weapons than other concerts.
- Religious and “faith healing” events may attract a significant number of ill and infirm people, which may increase the need for onsite medical care.
- Events for senior citizens may also require higher levels of health services.
- Certain sports events may attract over-reactive and violent supporters.
- Cultural events may require special arrangements, including the provision of interpreter services, special food services, and multilingual signposting, brochures, and announcements.

- **Types** - See Crowd Types in the appendix page 5;
- **Catalysts** - See Crowd Catalysts in the appendix page 7;
- **Behavior** - See Notes on human Behavior in the appendix page 1
- **Densities** - See Critical Crowd Densities in the appendix page 8;
- **Metering** - Control procedures used to prevent critical crowd densities from developing in specific areas, especially useful in managing potential "bottlenecks;"
Risks and Hazards Analysis

- Throughput Capacities - See Crowd Throughput Capacities in the appendix;
- Outdoor Concerts - additional considerations:
  - Control and distribution of spectators in the field,
  - Suggested minimum space allocation of 4 - 5 square feet per person on grounds with no seats, and
  - Some form of sectored and barrier management by security is important.

Entrances and Exits
Important considerations for the entry and exit of spectators include:

**Entrances**
The primary function of entrances is to provide:

- For supervision, marshaling and directing crowds,
- Access for emergency services, and
- Egress and evacuation routes.

Entrances should also:

- Be clearly signposted,
- Be in working order,
- Provide access for wheelchairs, and
- Provide separation of pedestrian and vehicular traffic.

**Exit Management**—Event organizers should:

- Permit flexible opening and closing times. (However, advertised times are recommended.);
- Stagger entry times by providing supporting activities;
- Keep entrances clear of all other activities;
- Keep lines away from entrances;
- Ensure there are sufficient numbers of suitable barriers, fences, gates and turnstiles;
- Locate ticket sales and pick-up points in line with, but separate from entrances;
- Arrange to have a public address system or alternative communications system to provide information and entertainment to the crowd waiting at the entrance;
- Provide sufficient numbers of personnel who are appropriately trained;
- Ensure that control points for searches to detect prohibited items, such as alcohol, social drugs, glass, metal containers and weapons, are in place and do not affect movement;
- Provide a secure area for the storage of confiscated goods;
- Provide toilets, if lines are expected to be long; and
- Apply metering techniques as appropriate.
Risks and Hazards Analysis

**Exit Management** — Event organizers should:

- Ensure that exit doors are not locked. If personnel are concerned about illegal entry, then doors could be fitted with alarms.
- Ensure exit doors open in the direction of escape and are confirmed as operational;
- Check placement, function, and signposting of exits;
- Ensure that doors that do not lead to an exit are so marked, preventing “dead end” entrapment and the potential for panic;
- Ensure that all exit corridors are free of all impediments to crowd movement;
- Ensure that turnstiles are freewheeling or can operate in reverse; and
- Ensure that cables, which can create trip hazards, do not cross exit corridors. (If this precaution is unavoidable, the cord should be marked, insulated, and secured to the floor to prevent damage and potential electrical risks.)

**Escalator Management** — Event organizers should provide for:

- Staff control at top and bottom, including an emergency stop button, and
- Metering of flow at both ends.

**Stairway/Corridor Management** — Event organizers should provide for:

- Control of both ends if the crowd is large, and
- Metering that may be required for safety.

**Ticketing**
Ticketing is the first means of achieving crowd control. Essential matters to address include the following:

- If advanced ticketing is possible, it is preferred since it allows organizers to anticipate audience numbers and plan accordingly. It also enables them to pass on information about needed services (for example, parking, traffic patterns, first aid, water sources, toilets, and personal needs) to ticket-holders before the event.
- When multiple entrances to the venue are provided, directing spectators to arrive via specific entrances can reduce congestion.
- If it is feasible, stagger crowd arrival by specifying entry times. Again, this plan reduces congestion at entrances.

**Barriers**
Effective use of barriers can prevent many problems, including congestion in thoroughfares and walkways. Questions you should consider in the planning phase include the following:

- What types of barriers are required? Is a solid physical barrier required, or would a psychological barrier, such as barrier tape, suffice? The use of psychological barriers is
suitable only for orderly crowds. Any physical barrier must be able to withstand crowd surges.

- How will personnel respond if the barrier is breached?
- Can barriers be used to section the crowd and create passages for emergency personnel to evacuate ill or injured spectators?
- Will barriers be used to create a “pit” between the crowd and the stage, which can be used to facilitate the evacuation of injured spectators?
- Can barriers be easily dismantled by crowd and used for other purposes?

**Defusing Crowd Tension**

The tedium that is created by an extended wait in line for tickets or admission can be a precursor for crowd control problems. Such boredom can create or magnify tempers, particularly if, with little distraction, those in line perceive other doors being opened first or other patrons getting in at the head of the line.

The following means of defusing anger have been used with success in different venues:

- Up-tempo music (of a type consistent with the age group of the crowd) played over the public address system;
- Humorous, animal-costumed individual, such as a mascot, walking up and down the line giving handshakes, pats, and waves;
- Large inflated beach ball, which is lobbed back and forth over, and by, the spectators;
- Food and beverage sellers moving through the group; or
- Cheerful security staff, passing up and down the line, talking to people.

Introducing some of these same distractions inside the event can calm a potentially agitated crowd.

In addition, a mascot conducting a spectator sing-along to up-tempo music or a ticket or program number draw on the field for the last ball used at a sporting event can alleviate tension in a crowd.

Whenever possible, spectators should be informed before an event of any special conditions or arrangements for the event, such as parking, clothing, food and drink, sunscreen, shelter, and alcohol restrictions. Notice of special conditions or arrangements may be distributed through advertisements or in leaflets accompanying tickets.

Outdoor events, sometimes spread over large areas, require further considerations, such as:

- Toilet facilities located outside gates and between disembarkation points and the venue,
- Shelter, and
- Telephone facilities.
The venue should allow adequate regulation of crowd movement, such as adequate exiting from ticketed seating areas and sectoring and flow barriers, including barriers to separate vehicles from pedestrians.

Spectator overflow areas should be available to prevent crushing. Contingency plans are required in case spectator turnout significantly exceeds expectations. This phenomenon is common at rock concerts.

**Restricted Viewing Locations**
Clear lines of vision for spectators are important to reduce the likelihood that crowds will move to get a better view of the stage. Also, a wide angle of view helps to reduce crowd densities in front of the stage.

**Video Screens**
Video or projection screens aid in management since they can provide:

- Entertainment before and between acts,
- Information concerning facilities and important messages including public safety and traffic messages for both inside and outside the venue, and
- Close-up vision of on-stage action for spectators as a means of reducing crowd movement toward the stage.

**Panics and Crazes**
While the word "panic" is associated with a number of human behavioral patterns, in a crowd application, perhaps the definition by Fruin (5) is most appropriate. He defines panic as:

"... group behavior involving flight from a real or perceived threat, in which personal escape appears to be the only effective response. . . ."

As Fruin emphasizes:

"[I]nitial flight from a real source of danger is a very normal human reaction. . . . [P]anic behavior is really a result of frustration of that escape."

While panic is normally a flight or escape reaction, a craze is an opposite, but equally threatening, crowd reaction.

Fruin defines a craze as:

"... group behavior in which there is a temporary, short-lived competitive rush by a group toward some attraction or objective . . . ."

An alternate, but parallel definition is that a craze reaction exists:
Risks and Hazards Analysis

"... where no apparent danger is perceived [by numbers of a group] but [where] the group is given direction ... by an induced sense of urgency ... ."

Group restraint is temporarily abandoned as a result of a short-term fixation on the objective.

Panics are usually associated with crowd egress (exiting), whereas crazes are associated with crowd ingress (entering).

Often, absences of information, incorrect information, or perceptions are catalysts for the panic or craze. Remember that, in a dense crowd, individual perception is limited to interpretation of response behavior among surrounding persons in an individual’s immediate view.

TRAFFIC AND TRANSPORTATION

Transportation presents one of the first impressions attendees will have about an event’s organization, command, and control. Sitting in a line of cars for hours on the highway to gain access to an event will undoubtedly create a negative impression. The traffic from the event may not merely effect the local traffic but the traffic in the entire region. Planners should ensure the surrounding communities are aware of the event and the potential impact on traffic in their area.

Depending on the scope and size of the event, traffic may be a routine issue. For example, many sports stadiums hire professional traffic planners to provide guidance on the most efficient ways to facilitate access and egress to various parking lots, and have procedures in place that adequately handle traffic flow on a regular basis.

The promoter is responsible for any traffic disruption that is associated with the event and should be held accountable by the permitting authority. The permitting authority can require the promoter to work with local public safety and traffic service providers to create contingency plans to minimize negative traffic impacts on the community at large.

As a minimum, local law enforcement, departments of transportation and public works, the local media, any existing public transportation authorities, and the promoter should comprise a traffic management group who must begin traffic planning well in advance of the event. Well in advance of the event, the group should use the local media to inform residents of the expected impact the event will have on their mobility.

Being straightforward about anticipated problems or congestion areas with the local community will minimize the negative impact on local traffic service agencies. Many residents, when advised in advance to do so, will avoid certain areas or take alternate routes so their movement is not impeded or prolonged.
Traffic and transportation concerns that traffic management must address include:

- Does the site have adequate access and staging area for large numbers of emergency vehicles in the event of a major incident?
- What impact will weather conditions have on transportation?
- What type of road leads to the event? Paved? Gravel? Dirt?
- Is access to, and the road network within the site, adequate to prevent emergency responders from having to walk significant distances to the principal spectator area(s)?
- Once on the site, is there sufficient room (that is, for staging, maneuvering) to permit repositioning or redeployment of emergency vehicles as dictated by the incident?
- Due to the nature of road access, would early arriving vehicles, such as ambulances, be prevented from leaving by gridlock produced by subsequently arriving equipment?
- Does an access road or street that could be closed to the public and used only for expeditious emergency and service vehicle ingress and egress serve the site?
- If access roads are unpaved, would emergency vehicles become bogged down if heavy rains occurred during, or just prior to, the event?
- Is the surrounding road network able to handle the anticipated spectator vehicular traffic?
- If spectator-parking areas are filled, will the road network allow continued vehicle flow, thus preventing gridlock?
- Is signposting, including gate numbering, clearly established inside and outside the venue?
- Are communications systems inside and outside the venue capable of providing public announcements, marshaling instructions, and evacuation orders?
- Is a system in place to monitor crowd flow (as through the use of spotters or aviator resources)?
- Does the organization have additional towing vehicles available?

Where there may be health and safety implications, efficient management of crowd movement includes:

- Awareness of public transport congestion at road, rail, and water interchanges and, in some cases, at airports;
- Use of coaches and buses to reduce private vehicle traffic and any potential problems which large vehicles may present, for example access difficulties, parking requirements, potential road blockages;
- Alterations to normal traffic and road use;
- Traffic control;
- Adequacy of the surrounding road network to handle the anticipated spectator vehicular traffic before, during, and after the event;
- Communication between traffic management groups and other services, including the local media; and
- Access and egress routes including:
  - Arrangements for people with disabilities;
Risks and Hazards Analysis

- Pedestrian access, including considerations of distance, terrain, surface, and lighting; and
- Designated pick-up and set-down points.

Vehicle Access and Egress Routes
Consider the environmental hazards that may result if access and egress routes are not established for:

- Portable toilet pump-out;
- Garbage removal;
- Water tankers;
- Car parking;
- Ambulances;
- Law Enforcement vehicles;
- Fire vehicles;
- EMS vehicles;
- Public Works and Utility vehicles; and
- Other essential service vehicles.

Signage and Use of the Media
If organizers anticipate that event traffic will have a major impact on community surface streets, they should consider ordering the promoter to hire a professional traffic planner to work in conjunction with law enforcement and public works to create alternate routing or special signage to and from the event. Strategically placed, variable-message signs on the highway that allow text messages to be changed by remote control are very useful devices to inform the motoring public. Temporary, fixed signage can also be considered. The additional signs must be the current industry standard and be easily understood by the public.

Additionally, using a local AM radio station or a specially designated frequency to broadcast travel information and instructions from the Public Safety Incident Command Post to arriving or departing patrons on the day of the event can help to lower their frustration. Broadcasting is also a means for event command and control staff to provide patrons with useful guidance and safety messages prior to their arrival. Much useful information, such as traffic routing and the AM radio station channel that will carry event traffic information, can be included in advance ticket-sales packets so spectators are informed before they even leave their homes.

Traffic Monitoring
Traffic monitoring should be carried out by periodic radio contact with ground forces in the field of the event “footprint” and by surveillance from aerial observation platforms. Fixed-wing aircraft can stay airborne for extended periods of time to obtain the full view of traffic flow. Helicopters can be used to view both the full area and specific problem areas that may warrant closer attention than can be provided by fixed-wing aircraft. Stationary, closed circuit TV cameras in areas prone to congestion can also be considered for use.
Public Transportation
If public transportation is to be used by patrons for access to the event, a separate ticketing and admitting area can be established to permit smooth drop-off and pick-up. If available, public transportation should be encouraged by event organizers because it tends to lessen the negative impact on local community street traffic. It also decreases the number of parking attendants required at the event site. Another facet of public transportation for consideration is event-only transportation. At many large-scale events that require off-venue parking, promoters lease school or private buses to provide transportation from specific pick-up sites within the community and from remote event-specific parking areas. If public transportation is offered, planners must coordinate with law enforcement and public works for assistance. Public works and law enforcement may choose to close lanes or streets for use only by the public transportation.

Towing and Disabled Vehicles
Promoters should be required to hire towing companies to facilitate the removal of disabled or illegally parked vehicles. At minimum, one tow truck per parking lot should be available and readily observable as private vehicles arrive. The mere presence and active use of tow trucks can act as a deterrent for those motorists who may consider parking illegally. As a general rule, one tow truck for every 2500 anticipated vehicles can be considered adequate for planning purposes. The size, type, and location of the event may change the needs.

Tow companies should establish a standard procedure for impounding and owner retrieval and should set maximum fees per impounded/towed vehicle in advance of the event. Also, a mechanism (database) for tracking where vehicles from certain areas have been towed and a mechanism for informing motorists of how to find their cars should be in place (for example, establish an 800 phone number). This information should be shared with the appropriate authority and the command post, should owners of towed vehicles arrive there to ask about their vehicles.

A consideration is for the promoter to be held accountable for any costs associated with towing that are not covered by towing fees. Public safety agencies should handle regulation and oversight of any towing arrangements made during the planning process.

Parking
With the crowd and the traffic risks also come the inevitable parking problems. A basic formula for estimating parking requirements is to anticipate one vehicle for every three persons in attendance. Areas of specific concern are:

- Public parking arrangements - Have you made arrangements for overflow parking, signposting, and segregation of pedestrian and vehicular traffic? If spectator-parking areas overflow, will congestion on surrounding roads result? Are shuttle buses desirable, feasible, or necessary?
- Parking control - Should anticipated spectator parking areas be filled, are there nearby areas for overflow parking? Are shuttle buses desirable, feasible, or necessary?
• Towing - Are towing policies established to determine where stalled or disabled vehicles will be towed, or how the owners can find their vehicles, and who bears the cost of towing and storage?

Auxiliary Parking Lots / Shuttles
If the event venue does not have established parking lots available, then temporary, auxiliary lots need to be established. Considerations for these lots include:

- Lighting for hours of darkness,
- Compliance with the ADA,
- Publicizing the location of the parking lots and the shuttles,
- Toilet facilities, and
- Public transportation (shuttle busses) to and from the event site.

Dedicating specific busses to certain lots aids attendees going to and from the event. These lots should be clearly distinguished from one another and adequately marked. (Color-coding is one effective method of distinguishing busses. For example, Red Line busses, marked with a red dot in the window, only go to and from the red lot.) The location of these lots needs to be determined well in advance so that traffic management can evaluate them in relation to the overall incident traffic management plan. If these lots need to be rented or leased, the promoter should be held accountable by the permitting authority for any costs associated with their establishment.

Parking attendants in charge of the auxiliary lots are required to direct event spectators to park their cars in the configuration recommended by the traffic planner. If event spectators park their own cars, they may park in such a way that the capacity of the parking lot becomes greatly diminished, and control of traffic in and out of the lot can be lost. Parking attendants can be trained volunteers, paid promoter staff, or public safety personnel. A consideration is for the promoter to be held accountable for any costs associated with providing parking attendants.

PUBLIC HEALTH

Public health interventions are designed to prevent or minimize injury or ill health. Mass gatherings present particular challenges for prevention of or at least minimizing harm to participants, spectators, and event staff, especially when the event is held at a temporary venue. Familiarity of the financial stakeholders of the event with each other’s roles and responsibilities, and knowledge of the potential and actual public health issues, present a common challenge.

This section provides guidance on the primary public health issues likely to arise during the planning phase of a mass gathering event. If state or local legislation is in place, that legislation takes precedence over advice contained in this manual.
Pre-event Public Health Survey
Event organizers should conduct a pre-event public health survey for any venue intended for a mass spectator event. A pre-event survey form is included in the appendix.

Organizers should consult appropriate health authorities to ascertain the availability of:

- Running water (particularly for hand washing by food service and medical personnel);
- Sufficient public toilets (with provision for pump out of portables and servicing as necessary during the event);
- Adequate refrigeration for perishable food stuffs;
- Recognized, approved suppliers of bulk food items delivered to the site food providers;
- Sufficient number of covered containers for the storage of food and solid waste, including removal during the event; and
- Appropriate storage and removal of liquid waste.

Public health inspectors should be available on site during the event to monitor public health compliance.

Public health authorities on site should have legislated authority to enforce "cease operation" orders on onsite food providers who are in contravention of standards or are otherwise operating contrary to the public interest.

Public Health Contingency Arrangements
The arrangements outlined in this chapter are designed to prevent an adverse event or minimize the risk that an adverse event will occur. However, unforeseen circumstances that may create a public health risk always exist. Some basic thought must be given to making contingency arrangements and documenting these arrangements in the public health emergency management plan. The plan should include the following details, as a minimum:

- Contact details, including after-hour information, for principal event personnel (for example, event organizers, environmental health officers, trades persons, and emergency service personnel, including health services personnel);
- Contact details for additional staff;
- Details for 24-hour contact of the food proprietors;
- Arrangements for alternative suppliers of equipment and utilities in the event of a failure or loss of water or power;
- Arrangements to replace food handlers who become ill;
- Arrangements in case of product recall;
- Epidemiological tracking;
- Procedures for handling complaints; and
- A debriefing procedure.
Risks and Hazards Analysis

Monitoring Health Risks
First aid posts and security personnel can provide information to help assess health and safety risks. First aid posts can provide data by collecting gastrointestinal illness surveillance information (see the appendix for a questionnaire form) or maintaining records of injuries, incidents involving watercourses, and alcohol and drug issues. Security agencies can provide information on safety hazards and alcohol and drug issues.

Food Safety
Food safety is a vital element of public health planning for public events. Unless personnel apply proper sanitary practices to food storage, preparation, and distribution at mass gatherings, food may become contaminated and present a danger to public health. Special “one-of-a-kind” outdoor events in warm weather pose additional risks since they tend to have less than ideal facilities for food handling, transport, and storage.

To ensure that adequate food safety standards are met and maintained, an environmental health officer should initially assess food service proposals, including the authorization of vendors, as part of the pre-event planning outlined in Chapter 1. The health officer should base any assessment on current local and state food hygiene legislation and food safety codes. The officer should follow this assessment with a pre-event audit as well as periodic monitoring of food safety throughout the event.

This assessment should form part of a comprehensive food safety plan for the event, including:

- Licensing/permit procedures and authorization of vendors,
- Quantities and types of food,
- Lines of supply,
- Premises where food is stored,
- Preparation techniques,
- Disposal of foods,
- Means of distribution, and
- Food safety documentation, including the Hazard Analysis Critical Control Point (HACCP) approach and surveillance.

Food vendors must meet appropriate licensing and registration requirements of the responsible health authority, including an “off-premises” food-catering license as appropriate. During the event, onsite environmental health officers must have the authority to close down any vendor who is contravening food hygiene legislation and public health requirements. In some cases, this action may necessitate passing particular local laws or ordinances.

A sample “Checklist for Food Vendors” form appears in the appendix.
**Risks and Hazards Analysis**

**Food Premises**
Set up and construction of the food premises must be in accordance with state regulation and codes of practice. The premises or areas to be used for food storage, preparation, and service must be easily cleaned and neither promotes the harboring of rodents and insects nor the build up of dirt and food particles.

**Equipment**
Equipment used in food preparation, distribution, and storage must be in a safe working order and easily cleaned.

**Safety**
The safety of both staff and the public is always an important consideration, and you must meet occupational health and safety standards. Some of the hazards to avoid include loose power leads, trip hazards, inadequate refuse disposal, inappropriate positioning of equipment (especially hot equipment), poor ventilation and extreme temperatures in the work environment, badly stacked supplies, and unguarded equipment.

**Waste Disposal**
A regular disposal system should be put in place. Decayable refuse, in particular, can cause problems arising from odor, insects or rodents, or other animals. Adequate disposal facilities must be easily accessible to food handlers as well as removal contractors.

Organize a separate refuse collection for food premises and continually monitor it to ensure that the frequency of collection is appropriate.

Where possible, encourage the separation of refuse into dry, wet, and hazardous disposal units. For more information on refuse disposal, refer to the discussion under Waste Management below.

**Water Supply**
Provision of a supply of potable water for sinks is essential. Those operators using water stored in their own tanks must have access to facilities to refill diminished supplies. Ensure that this access is organized before the event. If possible, at outdoor concerts in extreme heat conditions, all potable water supply lines should be buried to avoid breakage and contamination by concert attendees. Having a NO GLASS policy is wise to prevent hazards caused by broken glass. (For more specific details on water supply, refer to the section on Water below.)
Hand Washing
Hand-washing facilities must be provided for the exclusive use of food handlers. Potable, running water must be used for hand washing, and, where possible, hot water should be available. Soap and disposable hand towels should be provided in the hand washing area.

Sinks
Potable water must be supplied to all sink areas. Hot water should be used where possible. An appropriate detergent and sanitizer should be used to adequately clean all sinks.

Food Supplies
Foods used should come only from registered outlets and should not be prepared in domestic kitchens. Food proprietors must ensure that food supplies have been prepared and transported in accordance with relevant standards.

Transporting Food
The time required for food transportation should be kept to a minimum. Temperature requirements should be maintained, and the food should be protected from contamination at all times.

Food transport vehicles should be clearly identified and subject to surveillance and monitoring.

Food-Handling
Essential matters to address include the following:

Cross-Contamination — The following points apply:

- Every effort should be made to minimize the risk of cross-contamination during the food handling process. Food utensils and surfaces used for the preparation of raw and ready-to-eat food should be clearly distinguished. In cramped circumstances, this distinction becomes more difficult to observe. Adequate cleaning and sanitizing of food utensils and surfaces between uses plays an important role in reducing problems arising from cross-contamination.
- Disposable, plastic gloves should be worn and changed frequently. The temptation to continue to wear the same gloves exists, even after the work being undertaken has changed. Encourage frequent hand washing.
- Appropriate food storage is critical to ensure there is no contamination between raw and cooked or ready to eat foods. Raw foods should be stored separately if possible, or at a minimum, stored below cooked or ready to eat foods.
Risks and Hazards Analysis

- Equipment must be adequately cleaned and sanitized between each separate process. This is particularly critical where equipment is used for preparing different food types.

**Thawing, Cooking, Heating, and Cooling** — The goal in monitoring temperature control is to minimize the time potentially hazardous foods are in the danger zone of 10°F to 127°F. Key points to remember include:

- Thaw food under refrigeration or in cold, running water.
- Cook food thoroughly to achieve a core temperature of 150°F.
- Minimize reheating of food. Where reheating is required, heat the food thoroughly and store above 127°F.
- Cool food quickly under refrigeration.
- Portion food into trays not more than 4 inches deep.

**Cleaning and Sanitizing** — The following points apply:

- Regardless of the type of facility in which the food is prepared, regularly clean and sanitize all food contact surfaces using an appropriate sanitizer. (Sodium hypochlorite, 100 - 200 ppm, is appropriate for this purpose.)
- Clean all other surfaces to minimize the risk of contamination of food products. Also be aware of pest infestation and occupational hazards, such as slippery floor surfaces.
- Consider the provision of a designated wash up area for food outlets to reduce sullage waste storage and pump out at each food outlet.

**Chemical Storage** — Store chemicals in areas separate from foods and clearly mark the contents on chemical storage containers. Never use food containers to store chemicals.

**Food Storage**

Essential matters to address include:
- Storage Facilities — Provide facilities of adequate size and appropriateness for the purpose.
- Temperature Control — The following points apply:
  - Refrigerated or heated storage areas require a continuous power supply. You must store potentially hazardous food at temperatures below 10°F or above 127°F at all times.
  - Refrigeration can pose a problem particularly in hot weather when refrigeration units struggle to cope. In case of refrigeration failure, all proprietors should indicate alternative refrigeration suppliers, or the organizer or authority could identify alternative suppliers in the public health emergency management plan.
Risks and Hazards Analysis

- Cross-Contamination — The following problems must be overcome:
  - The less than ideal conditions that confront food handlers working in temporary facilities may lead to a compromise in appropriate food handling practices.
  - Space is often a major problem. Ensure that, at a minimum, raw and cooked or ready-to-eat-foods are stored appropriately. Food handling staff must be aware of the requirements for strict hand washing and for the cleaning and sanitizing of equipment between handling raw and ready to eat foods.

- Dry Goods — Appropriate and sufficient storage conditions should be available to ensure adequate protection of food from the elements and pests.

- Food Protection — Protect exposed food available on display from insect pests, dust, and human contact.

Food Handling Staff Considerations
Important matters to address include:

- Training — Encourage proprietors to select staff with food handler training to work in temporary facilities.

- Personal Hygiene — Selection of staff should include factors such as high personal hygiene standards. Food proprietors should ensure that a non-smoking policy is implemented in the workplace.

- Communications — Proprietors should be able to demonstrate that they have an efficient reporting and communication system so that staff can identify public health problems and deal with them promptly.

- Supervision — Encourage proprietors to provide appropriate supervision to ensure a team approach to the provision of a safe food supply.

- Dress — Food handler’s dress should be appropriate to the task they are performing and include some form of hair covering.

- Infectious Diseases —
  - Proprietors should be reminded that food handlers must not work while they are in an acute stage of any gastrointestinal illness or the common cold.
  - Proprietors should remind food handlers who have open wounds to dress all wounds with a waterproof dressing and to change the dressing regularly.
  - Provide segregated toilet facilities exclusively for food handlers.
  - Monitor these facilities for any signs of pest or rodent infestation.
  - Proprietors should keep a register of any complaints that they may receive from food purchasers.

A sample “Checklist for Food Vendors” form appears in the appendix.
**Health Promotion**
Consider the opportunities to promote health messages at public events and to encourage event organizers and service providers, such as food vendors, to participate. Examples include:

**Sunsmart**—Encourage the provision and use of shade areas. Encourage the use of sunscreen creams and hats, and make them available for purchase by spectators.

**No Smoking**—Encourage the provision of non-smoking areas and ban the sale of cigarettes at the event.

**Nutrition**—Encourage food proprietors to provide nutritious foods. Encourage event organizers to select food vendors that provide nutritious food varieties.

**Safe Sex**—At certain events, the promoter may wish to convey safe sex messages and consider providing free condoms.

**Alcohol**—Consider the designation of alcohol-free areas or restrictions on the sale of alcohol. Also consider glass-free policies. Alcohol-free events will minimize aggressive behavior of spectators and also minimize the use of restrooms and water supply needs.

**Drugs**—Consider opportunities to spread anti-drug abuse messages.

**Hearing Protection**—Consider providing advice about hearing protection and possibly free ear plugs to spectators and participants. Providing hearing protection is especially applicable at venues such as rock concerts and car races.

**Water**
An adequate supply of safe drinking water must be available. One guideline suggests making available 21 quarts of potable water per person per day, of which 5 quarts is the drinking water component. Consider event duration and location and the anticipated ambient temperature in determining the quantity of potable water required.

All water provided must be tested to ensure its potability. In areas where non-reticulated water is the only source for personal use, then consider the clarification and disinfecting of the water supply to achieve a level greater than 1 ppm residual chlorine.

Some consideration must be made to ensure the water is safe from deliberate contamination. Placing the water supply in a secure area or having someone guard the water supply are two options available.

Appropriate access to drinking water must be available for spectators in a field or outdoor venue or at events such as “raves,” where the activity produces an extreme heat environment.
Water pressure must be adequate to provide for all normal use and for use during peak demands. Alternate water supplies must be available should existing supplies fail to meet demand or should the supply be rendered unsafe or unusable.

**Toilets**
Where existing toilet facilities are judged inadequate, you must make available additional portable units.

Toilet locations should be:

- Well-marked;
- Well-lit (including the surrounding area) if night use is anticipated;
- Serviced (including pump-out of portables) on a 24-hour schedule during the event (vehicle access is obviously necessary);
- Located away from food storage and food service areas; and
- Secured to prevent tipping.

Toilets are a useful area in which to also make available facilities to:

- Provide for the safe disposal of needles, syringes, and other sharps; and
- If appropriate, provide condoms at some events.

The following considerations will determine the number of toilets to be provided for particular events:

- Duration of the event,
- Type of crowd,
- Weather conditions,
- Whether the event is pre-ticketed and numbers known or unticketed,
- Whether finishing times are staggered if the event has multi-functions, and
- Whether alcohol will be consumed.

Calculating the number of toilets required for an event is a matter for conjecture. Where local laws or regulations do not exist, the following guidelines can be applied. Better management of events can be achieved by providing additional facilities. Assume a 50/50 male/female split unless otherwise advised. The following tables should only be used as a guide.
Toilet facilities for events where alcohol is not available

<table>
<thead>
<tr>
<th>Patrons</th>

</table>

Toilets for the Disabled

At least one unisex toilet for the disabled is required. Check with your local ADA office for further guidance.

Food Vendors’ Toilets

Separate toilet and hand washing facilities should be made available for food handlers.

General Considerations

In an outdoor setting, it is a relatively simple matter to provide additional toilets by hiring temporary, portable toilets. This solution may not be suitable for indoor settings, for which provision of additional toilets may be more difficult. One possible solution is to convert some men's washrooms to women's for events where you anticipate a predominantly female audience, or vice versa.
In order to avoid long lines, particularly at female toilets, organizers may identify some toilet facilities as unisex toilets.

Maintenance and cleaning schedule for toilets and sinks should ensure:

- An adequate supply of toilet paper and soap,
- Clean toilets throughout the duration of the event,
- Provision for disposal and removal of sanitary napkins, and
- Availability of a plumber or appropriate maintenance person to repair or remove blockages.

Organizers should ensure that adequate cleaning supplies are available for use by the cleaning staff.

**Showers**

At an extended event, promoters and planners may decide to provide showers. If they do provide showers, they must consider the additional demands for potable water and drainage. If municipal water supplies and wastewater treatment plants cannot service the shower facilities, providing shower facilities could prove to be a very costly and formidable task. Ensure that showers are located on high ground so that muddy areas are not created.

**Solid and Liquid Waste Management**

Major considerations are as follows:

**Food Waste**

- Deposit food waste in covered containers placed strategically around the venue. Covers are essential, especially in outdoor settings or if high temperatures are expected.
- Spectator density may prohibit access by garbage removal vehicles. To prevent containers from overflowing, empty containers regularly and move waste to a temporary, properly prepared holding area until bulk removal can be accomplished at designated times or after the event. Removing food waste often and in a timely manner prevents other diseases and pests.

**Empty Containers**

Make arrangements for the appropriate storage or disposal of empty containers, such as cardboard boxes.
Risks and Hazards Analysis

Hazardous Wastes
Special arrangements must be established for the collection and disposal of various forms of hazardous waste, including waste from food preparation areas, medical sharps, and other hazardous materials.

Clinical Waste
Ensure there is provision for the storage, collection, and disposal of clinical waste generated from onsite medical and first aid facilities.

Sewage and Sullage
Provide and maintain adequate facilities for the ongoing storage and disposal of sewage and sullage. As with all other wastes, this must be removed in a timely manner and on a frequent basis.

Recycling
Where possible, consider providing specific containers for recyclable materials. Vendors should be encouraged to use recyclable packaging of foodstuffs. A sufficient number of dedicated containers should be placed near the vendor area to further encourage recycling.

Animals, Rodents, and Vegetation
In outdoor settings, the control of rodents, snakes, spiders, mosquitoes, and insects of significance to public health must be addressed. If particular hazardous species are known to inhabit the area, or if carriers of particular diseases are prevalent in the area, alert the attending first aid and medical personnel.

Alert medical and first aid personnel to the presence of potentially poisonous and noxious plants and trees in the area.

If domestic animals are permitted into the venue, establish rules for the control of animals and their waste. Check with your local animal control or shelter for more guidance concerning animal regulations.

Also consider the potential effect of the event on nearby domestic or farm animals and native fauna.

Swimming and Water Safety
Purpose-built swimming areas must comply with state requirements for water quality and meet other local requirements, such as fencing. Assess the suitability of other watercourses in the vicinity of the venue if spectators may use those watercourses for water recreation or washing. If these watercourses do not meet requirements, fence them off and erect warning signs against their use.
Risks and Hazards Analysis

Address water quality in both designated swimming areas and areas that could be used for swimming in hot weather. Experience has shown that where audiences attend an outdoor concert in hot weather, particularly in overnight events without adequate or convenient washing facilities, they will employ any nearby water area as a makeshift swimming, bathing, or washing area.

Consider making available some form of trained supervision for:

- Families with small children;
- Spectator groups for which alcohol consumption, with subsequent judgment impairment, is anticipated; and
- Areas of water that pose additional hazards such as steep, slippery sides; submerged snags, or unusually variable depths.

Infection Control and Personal Hygiene Concerns

Infectious disease transmission through unsafe sexual practices or drug use may be a health risk at some events, particularly for those at which spectators are camping at the venue overnight. To reduce these risks, consider providing or making available condoms and a properly licensed needle exchange/disposal mechanism. While these are sensitive and controversial issues, and political issues in some areas, they are nevertheless important public health concerns in contemporary society, and you should address them.

At events where the duration extends overnight or longer, provide hygienic washing facilities. Suggested minimum requirements for facilities at campgrounds, based on two to three nights’ camping, are as follows:

Tattooing and Body Piercing

With a return in popularity of tattoos, body piercing, and branding, mobile operators have begun to appear at certain types of public gatherings, such as carnivals, motorcycle races, and auto swap meets. Where this activity is likely to occur, check the need for proper licensing or registration of such service providers and their compliance with any health legislation.

Due to the potential of cross-infection, particularly of blood-borne diseases, inspect any such operations to ensure, as a minimum, the use of:

- Disposable, single-use skin penetration items,
- Proper sterilization equipment and techniques,
- Clinical sharps containers for used needle disposal, and
- Sharps containers safely located away from children.
If the service providers do not use these minimum infection control procedures, do not allow them to perform any skin penetration procedures.

**Post-event Public Health Survey**

Conduct a post-event survey to ensure that personnel have conducted a proper clean up, particularly from a public health perspective. For example, check that all scrap foodstuffs and discarded needles are properly disposed of. All involved in planning the event should return the venue to its pre-event condition.

When the event includes fireworks, conduct a diligent search for any unexploded fireworks. Before you allow public access to the area, safely collect and remove any unexploded fireworks.

As an additional precaution, retain appropriate records of all service providers at the event so that they may be traced should some subsequent outbreak of a notifiable disease occur or if a claim is made for an injury or illness.

Health personnel should also be conscious of the need to introduce a monitoring or surveillance system should they subsequently become aware of any particular health problem arising from an event.

A formal public health debriefing should follow the event, and a public health representative should participate in all agency debriefings.

**MEDICAL CARE**

Spectators and participants at mass gatherings may require medical attention in the event of illness or injury. The incidence of illness will be greater at an event for spectators than that expected to occur naturally in a population of comparable size.

The number of spectators who require, or avail themselves of, onsite medical care, and the types of problems they present, will vary significantly depending on the nature of the event. While high-risk events such as air shows have caused significant loss of life (for example, the 1988 Ramstein Air Base air show crash), statistically, rock concerts have generated large numbers of casualties with less severe injuries and illness. Between 0.5% to 1.5% of concert goers will require some form of medical assistance, regardless of the character, locale, physical layout, and size of the concert.

Alcohol and drug use is common at most festivals and is the primary diagnosis in greater than 10 per cent of the persons seeking medical care. Other common complaints include lacerations, fractures and sprains, burns, sunburn, heat stroke, seizures, asthma, and exposure.
Medical Care Provision
Planning for the provision of medical care for both spectators and participants is essential, for both humanitarian and legal reasons. In addition, providing onsite first aid or medical care will significantly reduce the demand made on the emergency departments at local hospitals in the area of the event.

Event organizers may choose to contract with a health service provider, who may not be associated with the normal local service provider. Check to ensure that the service provider meets the local emergency standard. The provider must coordinate with the local health and emergency services to plan a response to any emergency or significant medical problems requiring further assistance. Notify local health authorities of the details of the event and provide them with emergency plans for a major incident.

Main Concerns in Planning Medical Care
Main issues to address in medical care planning include:

Logistics
Some medical logistics questions to consider in planning an event include:
- Will medical personnel operate in a facility to which the injured must make their way, or will clearly identified medical teams patrol spectator areas?
- Will vehicles be available to transport spectators to the medical facility?
- Will medical vehicles be appropriate to the terrain? Four-wheel-drive vehicles may be required for off-road areas and golf carts or similar vehicles required for high-density spectator areas.
- Where an ambulance is not required, will a “chauffeur system” be provided to transport persons from the onsite medical facility to their own transport vehicle?
- How will medical personnel be notified of, or summoned to, spectators requiring assistance in vast spectator areas?
- What means of communication will be available to permit attending medical personnel to communicate with offsite medical personnel, event organizers, security, and other support personnel?
- Are there any sponsorship conflicts between the event sponsor and any medical service operators?
- What level of onsite medical care, if any, do you expect to be required, given the nature of the event?
- What mix of medical personnel (first aid providers, paramedics, nurses, doctors) will you require on site?
- Who will provide the personnel? How will the cost for their services be funded?
- Are the health service providers from the local area? If not, how will their services be integrated with the local services?
- Are the selected personnel appropriately skilled to respond to anticipated medical problems at the event? They may require additional training.
Risks and Hazards Analysis

- Will medical personnel or vehicles need special credentials to allow them access to all parts of the venue, especially to any restricted areas?
- Are medical personnel assigned for public safety workers at the event?
- Are air ambulances available?
- Where is the closest trauma center?
- Does the area hospital have adequate bed and personnel capacity to respond to the emergency requirements of an event the size being planned?

Management and Planning (see the appendix for checklists):

- Determine which other organizations will be involved. Who will be the lead agency?
- Conduct planning meetings involving health personnel, emergency services personnel, and event organizers.
- Determine what is expected of each organization involved in the provision of medical care.
- Determine likely levels of care that will be required.
- Determine any local laws, rules, or regulations governing emergency first aid.
- Determine the budget for the provision of medical care services.
- Establish liaison with other emergency services (police, fire, and security).
- Identify equipment required and potential suppliers. Will the equipment be purchased, hired, or borrowed?
- Will volunteers be used? What accreditation will they be required to possess? What inducements will be offered?
- Ensure security of medical stations and safety of staff.

Planning Information

Obtain background information to assist with medical care planning available from:

- Reports from previous, similar events (medical and other specialist literature), and
- Lay literature (press).
- Medical literature that has information on risks and types of injury sustained at similar events in the past.

Consider effects of weather conditions on the spectators, such as hypothermia and heat stroke.

Consult medical literature for information on numbers of casualties from similar events in the past. See the table below for anticipated percentages of patients against triage categories. Consider variables that affect numbers, for example, alcohol consumption, psychosocial behavior, and type of event.

Medical Access to Venue
Consider risks associated with venue, for example, water in the vicinity.

Agreements must be reached among medical service providers on the following:

- Medical teams must be able to easily locate individuals in need of attention. You should agree on the use of a common reference map or grid system.
- How will medical teams reach or rescue individuals in distress, for example, in crowded areas or through fixed seating?
- How will patients be transported on site?
- Will you provide a dedicated access route, or emergency service lane, to allow rapid access to and from the venue for ambulances and other emergency vehicles?
- Will the event itself pose a barrier to medical teams, for example, community runs or a parade?
- Will you need aero-medical services, and if so, what are the associated regulations regarding their operation?

Medical Requirements

- Prepare for the most critical injury or illness foreseeable, such as cardiac arrest.
- Is there a need for a mobile team? This team may require pre-packed medical kits.
- Determine who will provide care for the audience, any VIPs, and performers.
- Define boundaries of care, for example, inside the venue and in the parking areas.
Level of Care

Categorized as follows:

- **Basic**—first aid;
- **Intermediate**—first aid plus IV therapy and oxygen;
- **Advanced**—Care and life support and early management of severe trauma; and
- **Site Hospital**—full monitoring and ventilation. A surgical facility may be required depending on the level/type of event.

Other level-of-care concerns include:

- Consulting medical personnel with experience of similar events to determine appropriate levels of care to provide;
- Considering the distance to, and accessibility of, the nearest hospital and its capability; and
- Pre-establishing the coordination between venue medical services and those of the local community emergency medical service responders (that is, establish how they will provide mutual aid if required).

Further guidance on the establishment of medical care facilities and their equipment requirements is available in the references and from local or regional disaster and health plans.

Medical Teams

When deploying medical teams, consider the following:

- Event size;
- Location with regard to medical infrastructure;
- Available medical resources;
- Local ordinances;
- How many teams are needed? For example, is one ambulance per 10,000 people and 1-2 doctors per 50,000 too much or not enough?
- Who can see, treat, and discharge patients?
- Will there be peak periods or special circumstances requiring additional staff?
- How will medical staff be fed, watered, rested, and protected from the elements?
- Are work safety regulations established that cover occupational health and safety (for example, protection from violence and crowd crushes)?
- Have medical teams been provided with maps of the venue?
- What arrangements are in place for movement of medical teams onto and off the site?
- Are medical team members appropriately dressed for the conditions?
- Is the dress of medical team members easily identifiable?
- Are interpreters required?
- Do medical teams understand the command structure and their role within it, and the emergency activation system?
Mobile Teams
In tightly packed areas, particularly near the stage, First Aiders on foot, bicycles, or golf carts may have the only access. Experience has shown that uniformed First Aiders on foot circulating in dense spectator areas are quite effective, and patrons will readily summon them in an emergency, even if the person requiring care is a stranger to them. Even if a clearly marked field hospital is visible, spectators are often unwilling to make the sometimes long trek to request assistance (since they may lose their seating position), particularly for a fellow spectator whom they may not know or if they fail to appreciate the seriousness of the patient’s condition.

Identification of mobile teams, where ambulance or clinical uniforms are unsuitable, can be successfully accomplished by special “event uniforms.” Mobile teams need to have communication equipment to keep EMS supervisors and the Command Post informed at all times.

(NOTE: The Red Cross symbol is registered by the International Red Cross and its National Societies. It should not be used as part of an “event uniform.”)

Medical Aid Posts
Important considerations in the establishment of medical aid posts require that they should:

- Provide easy ambulance access and egress;
- Be located within 5 minutes of all sections of the crowd;
- Have available a mode of transport to them;
- Be clearly sign-posted from all directions;
- Be clearly identified;
- Be clearly marked on maps of layout;
- Be in a position known by security and other event personnel;
- Be stocked and staffed for the duration of the event and for spectator arrival and departure periods;
- Provide facilities for injured or sick patients to lie down;
- Ensure privacy in clinical areas;
- Provide some means of communication with the primary medical control point, venue control, and with mobile medical teams in the venue; and
- Be located in as quiet a place as possible.

Site Hospital
Depending on the nature of the event, a site or field hospital may be needed to provide care for the number of casualties anticipated. You should also make contingency plans in case of a major incident, for which the resources of the field hospital may not be sufficient. Failure to plan for large numbers of casualties or severely injured patrons can result in long delays in providing medical treatment. It is important to provide a communication link between the site hospital and local hospitals.
Risks and Hazards Analysis

Site hospitals will require:

- Clean water;
- Electricity for medical appliances and adequate lighting in tent hospitals at night (this installation should, if possible, include a backup power system);
- Washroom/rest facilities for the exclusive use of staff and patients;
- Meals for medical staff;
- Tents for hospital use that have flooring as part of the structure to contain the service and to prevent ingress of water or insects;
- A landline telephone service for ordering of additional staff or supplies and for notifying hospitals of patient transfers (note that cellular telephones should be used as backup devices only);
- Reserved access roads for emergency vehicle use; and
- Dedicated disposal containers for ablutions, hazardous wastes, and sharps.

Documentation

Documentation should facilitate:

- Post-event review of medical assistance activities, and
- Tracking of biological, chemical, and infectious disease exposures should they occur.

Medical-legal issues, which must be addressed prior to the preparation of any documents, are as follows:

- Who has access to records?
- Who keeps the data and for how long?
- Who can give consent for treatment?

Ambulance Vehicles

Organizers should consult ambulance services to determine ambulance requirements for the event. Some considerations include:

- Will ambulances be pre-positioned on site or be called to the venue on an as-required basis?
- Providing a mix of Advanced and Basic Life Saving ambulances at the event.
- If ambulances are on site for participants (for example, at sporting events), are these ambulances exclusively for taking care of participants’ needs or emergencies, or will they be available for injured spectators as well?
- Are air ambulances available? Who will pay for the service? Can the promoter be made to provide the service?

While conventional ambulances are appropriate for patient transfers to offsite medical facilities over good roads, such vehicles may be unsuitable for off-road use. Ad hoc roadways and cross-country terrain may require four-wheel drive vehicles, particularly if grounds are saturated by recent rainfall. Since four-wheel-drive ambulances are not available
in most areas, other four-wheel-drive vehicles, equipped with appropriate medical equipment (including, but not limited to, resuscitation equipment, trauma kit, and spinal board) can serve as ambulances over the short distances between spectator areas and medical care facilities.

In denser spectator areas, any vehicle can have access problems. You should consider using golf carts, either designed or modified to accept stretcher cases from these areas.

For these reasons the ambulance network may have to consist of a mix of First Aiders on foot, golf-carts, four-wheel drive vehicles, ambulance buses, and conventional ambulances, to best facilitate patient transport requirements. You should provide a magnetic-based beacon, portable radio, and appropriate marking for these vehicles.

A communication network, designed to provide a coordinated response to requests for assistance, is essential. You may base the network on existing service networks, or event organizers may need to provide the network.

**Medical Equipment**
The requirement for basic or advanced life support equipment depends on the type of event and the assessed risk of illness or injury. While standard lists of equipment will cover most requirements, you should review literature, previous experiences, and current practices.

Further equipment considerations include:

- Mobile versus fixed requirements,
- Arrangements to re-supply aid posts as required, and
- Compatibility of onsite equipment with equipment used by ambulance and other health care providers.

**Other Medical Considerations**
Further considerations include:

- Providing a separate facility and staff to counsel victims of sexual assault and also to collect evidence;
- Ensuring sufficient water supplies;
- Providing sprinkler systems or misting tents for crowds in hot, open areas, if they are suitable for the event;
- Providing welfare and information services (the helping and caring role);
- Assisting with forgotten medications;
- Providing a baby diaper-changing and caring facility; and
- Containing and disposing of clinical waste.
- How, and by whom, will medical supplies be obtained, including secure onsite storage of drugs?
**Toxicity Laboratory**

Offering medical assistance to an overdose victim at a rock concert poses a major difficulty in making appropriate field diagnosis when the caregivers do not know the drug, the dosage, or the potency of the drug. Even when victims are coherent, they may believe they took a particular drug when, in reality, they took a different drug or one that was adulterated. As is well documented, there is no quality control, or ethics, in the dealing of street drugs.

To attempt to cope with onsite drug identification, medical staff at the Watkins Glen, New York, rock concert (July 26-29, 1973, estimated attendance 600,000) established a mobile toxicology laboratory on site in a trailer adjacent to the hospital tent. Apparently, this is the first time such a lab was included as part of the medical facility at a rock concert.

The benefits of an onsite mobile toxicity lab include triage of drug overdose cases for removal to hospitals, as well as reducing such numbers to be transported, which otherwise would be necessary, without toxicological diagnosis confirmation in the field.

---

**ENVIRONMENTAL CONCERNS**

**Weather**

Weather is a variable that takes on a different significance depending on the event and its location. For a major indoor event in a southern United States city, weather is seldom a major concern, unless a natural disaster, such as a hurricane, is anticipated. If you were to move that same event to a northern United States climate in February, you would be faced with additional concerns, sometimes even for a predicted “normal” winter storm. Slow moving traffic patterns, snow removal in parking areas, and safe movement of spectators from parking areas to the venue are a few concerns. Extreme high and low temperatures must be part of the contingency planning for an event. These extremes present hazards and risks not normally present but which must be considered.

In outdoor events, many additional concerns may become apparent regardless of location. Lightning strikes, severe thunderstorms and hail, high winds, and other undesirable weather pose threats to event patrons. The influx of patrons may have a severe negative impact on the jurisdiction’s mass evacuation and sheltering plan for local residents. Contingency plans drawn up for the jurisdiction may not provide for a transient population (as in the case of some rock concerts in the hundreds of thousands) that will negatively impact that community’s ability to protect residents and visitors.

During the planning phase, event organizers must adequately consider all potential weather conditions. For example, many concerns about weather were given consideration by planners for the 1999 Woodstock Festival held at the former Griffis Air Force Base in Rome, New York.

Two stages were to be erected at Woodstock, one in excess of five stories high, made from steel construction staging. These stages were to be placed at opposite ends of the runways in
large flat open spaces, in an area prone to thunder and lightning storms in mid-July of any
given year. Electrical professionals were posed the scenario of a lightning strike to the main
stage by a swift moving thunderstorm, and asked worst case scenarios of what to expect.
These professionals predicted that not only could anyone on the stage or scaffolding be prone
to electrocution, but many spectators on the ground around the stage could also be in danger
(depending on the location of the strike with the scaffolding, any grounding mechanisms in
place, and the severity of the storm). Local contingency plans for sheltering also did not take
into consideration the additional 250,000 people (the estimated attendance at this festival)
that the city of Rome or county of Oneida would be expected to protect.

Some considerations planners may wish to make regarding the weather are:
• Monitoring the weather using a computer, radio, or television;
• Establishing a dedicated a phone line that was linked with the closest office of the
  National Weather Service;
• Ensuring that ICS team consults with the Weather Service on a regular basis and that
  consultation information is included in each operational period Incident Action Plan;
• Distribute weather information to the participants;
• Contract or partner with a private sector meteorological prediction service;
• Establishing agreements with the promoter to interrupt a performance and use the festival
  sound equipment as a public address system to give information to patrons on protective
  actions to take should severe weather be imminent; and
• Coordinating with the Red Cross and concert organizers to dedicate specific buildings as
  evacuation shelters should the visiting public to the area require sheltering.

Developing severe weather contingency plans to ensure the safety of event attendees can
require a significant amount of time, equipment, planning, and multi-agency participation.

Site Hazards
In selecting a site, especially for an outdoor event, the planning team should identify the
potential hazards in the area, which include:

• Power lines that could be brought down by a severe storm;
• Structures and equipment prone to lightning strikes;
• Waterways that may be prone to flooding;
• Brushfires;
• High winds;
• Extremes of temperature;
• Pests, large animals, pollens, and poisonous plants, including:
  − Rodents,
  − Insects—ants, caterpillars, wasps, bees, mosquitoes, flies,
  − Snakes,
  − Spiders, and
  − Noxious weeds;
Risks and Hazards Analysis

- Marshes or swamps;
- Quarries, pits;
- Scrap piles;
- Cliffs and steep inclines;
- Water courses, depth of water, water currents, water temperature, water clarity;
- Pollution—dust, noise;
- Water quality (bacteriological), blue green algae;
- Darkness;
- Hazardous chemicals or underground tanks;
- Use of lasers;
- Alcohol, drugs, weapons, or potential weapons (for example, broken glass);
- UV radiation; and
- Neighboring land use.

Environmental Impact Concerns/Maintaining Compliance

To ensure compliance with public health requirements, carry out a public health audit just prior to the commencement of the event. Also undertake subsequent periodic surveillance during the event. These procedures are particularly important for outdoor events in hot weather with transient food vendors who may not have sufficient sanitary or refrigeration mechanisms available or established public health or safety protocols.

Environmental health officers should have access to resources to assist in early intervention when any problem is noted (for example, toilet servicing, unsafe areas, fencing repairs, water testing) rather than using their powers to stop the event or particular operation.

AIRCRAFT

If helicopter flights will be available for spectators or members of the media to view the event from the air, the following concerns should be addressed:

- Will flights be prohibited directly over the event and spectators and confined, instead, to circular paths around the perimeter?
- Will staging areas or heliports be confined to the periphery of the event, to avoid flights directly above spectators during take-offs and landings?
- Does the proposed staging area or heliport comply with federal regulations governing such use?
- Which public safety agency working the event will be designated as responsible for interacting with the FAA if required?
Risks and Hazards Analysis

SPONTANEOUS EVENTS OCCURRING AT PLANNED EVENTS

As the title for this section suggests, organizers cannot plan for or anticipate every crisis. However, you can take certain measures to ensure personnel safety. For example, if a stand collapses, the fire department uses an established, practiced procedure to remove the injured and to cordon off the area. This procedure will not change because the stand collapses at a spontaneous event. Contingency plans, modeled on established procedures, need to be in place for demonstrations, protests, or picketing that may occur during a planned event. Train for the worst and respond to your training. Plan for the worst, and you can handle even the unexpected events in an orderly manner. Designate specific incident resources in advance to respond to spontaneous events as they may occur. During event planning, brainstorm a list of potential spontaneous events most likely to occur.

CAMPING

If you permit camping at the event, you should consider the following:

- Providing for the safety of the campers and their belongings,
- Disposing of solid and liquid waste,
- Clearly marking temporary streets,
- Clearly defining avenues of access for ambulances, law enforcement, and other emergency vehicles,
- Controlling the building of fires’
- Removing fire hazards ahead of time, and
- Installing a public address system to communicate emergencies to campers.

Survey proposed camping areas to ascertain their safety, paying particular attention to:

- Low-lying areas subject to flooding,
- Areas adjacent to creeks or rivers,
- Areas near utility lines, and
- Trees that may drop branches, especially during a severe storm.

HAZARDOUS MATERIALS (HAZMAT)

The nature of some events causes concerns over hazardous materials and the ability of local officials to handle such incidents (for example, propane gas cylinders used for cooking and pyrotechnic lighting areas). In most communities the fire department is the agency set up to respond to hazardous materials calls. The best way to plan for disposal of hazardous materials is to inform the fire department ahead of time about potential hazards and their locations. Providing a brief strip map with a description of the possible hazard reduces the response time and allows the responder to be prepared. If the local fire company is not
adequately trained or equipped to handle the hazardous material, planners must identify in advance the closest department that is equipped and consider staging them close by during the event.

**Gas Cylinder Anchorage**
At many public events, portable pressurized gas cylinders are used to inflate children's balloons, to carbonate beverages, or to provide cooking fuel. Frequently, such cylinders are not secured, or are merely fastened to two-wheeled hand trolleys designed to transport them, which are themselves not independently secured.

If such cylinders topple and the cylinder neck or valve cracks, the uncontrolled release of the stored, pressurized gas can turn the cylinder into a deadly projectile. For this reason, all portable gas cylinders must be secured.

**Propane Leakage**
Used incorrectly, propane can be deadly. Propane is a flammable material that is heavier than air used for cooking at many large events. Tanks must be properly secured. Qualified inspectors, usually from the fire service, should also make periodic inspections of the tanks to ensure that the location is a safe distance away from heat sources or other possible sources of danger.

**Ability of Public Sector to Respond**
During the planning stages of an event, it is very important that you discuss with your local public safety providers exactly what agency is responsible for which response and know the capabilities of the local responders. In some communities the fire department is responsible for HazMat response; other communities have HazMat teams, and some use the state assets for response. Learn your community’s capabilities and HazMat protocol before they are needed and consider staging them close by for the event if the primary responders are not associated with the local jurisdiction.

**ELECTRICAL UTILITY COORDINATION REQUIREMENTS**

Participants, spectators, and event staff are all affected by lighting, which is needed to setup, tear down, and ensure the safety of the event. Make certain that lighting is adequate and that the power supply to provide the lighting for the event, campgrounds, and parking areas is adequate.

Even in venues that are darkened for performances, lighting should always be in use to identify exits as well as the corridors and aisles leading to them. All temporary electrical facilities should be inspected and approved by a local government inspector to ensure the safety of all.
Install auxiliary battery power or generators to provide light and to power the public address system in a power outage. You must be able to give information and directions to spectators during a power failure to alleviate panic.

Because many concerts are performed with only stage lighting, event staff access to the main lighting board or house lights console is essential in case of an emergency. Onsite personnel responsible for dealing with emergencies must know the location of the controls for these lights and how to operate them.

FIRE SAFETY

All states and territories have legislation governing fire safety. The local fire authority should monitor fire prevention and preparedness plans to ensure that the measures taken meet relevant standards. Organizers and health personnel should consider potential fire hazards in the planning process and discuss any concerns they may have with the fire authority. Fire and law enforcement should determine in advance how they will handle a civil disturbance or riot involving fire-setting behavior and have contingency plans in place. For example, a team of police officers may be assigned to accompany each engine sent out to quell a fire set by rioters.

Site design should be such as to mitigate fire hazards. For example, clear storage areas, timeliness in picking up trash, construction of metal rather than wood, no open flames, and control of pyrotechnics, assist in fire mitigation.

COMMUNICATIONS SYSTEMS

A means of communicating with the crowd is essential at all events. Ideally, you should establish multiple communications systems to enable messages to be directed at different sections of the crowd, including crowds massed outside the venue. The Command Post should have access to the central communications system.

Before the event begins, establish appropriate arrangements for communications should an emergency arise. If emergency personnel will use a separate sound system, they need some means of muting or silencing the stage sound system. Also, consider the use of signboards throughout the venue as an enhancement to the public address system.

Because public announcements are an important element of the safety plan for an event, consider the style and content of announcements, as follows:

- At what volume level can announcements be heard over spectator noise?
- Will the audience easily understand announcements?
- Are multiple language announcements required?
- What wording will lend credibility to the instructions?
If public address systems cannot be put in place outside the venue, personnel can use the public address systems that form part of the electronic siren system in most emergency vehicles.

Closed circuit television is another option available for organizers to provide visual information to the public.

**Two-Way Communication**

While it goes without saying that the various emergency services (police, health, fire) must be able to communicate with their own staffs, experience has shown that different services must be able to:

- Communicate with each other;
- Communicate between staff outside and inside the venue to obtain a proper understanding of the nature or scope of an emergency; and
- Communicate with senior event organizers, including security, who may be the first to identify an incipient problem.

Some areas to consider are:

- Do not rely on cellular telephones;
- Ensure there is an integrated, multi-agency frequency for communications;
- Consider laying land lines for telephone service; and
- Using amateur radio operators for communications.

A central communications area (for example, a room or a trailer dedicated to this use) at the Incident Command Post with a representative from each major agency may facilitate the dissemination of vital information through the centralized monitoring of relevant radio communications.

Since a single system can fail, the communication system should be multi-modal. It should also be supplied with own backup power source.

**Attendees’ Personal Emergencies**

Some means should be established to contact spectators and for spectators to call outside the venue if necessary. Some events provide small booths staffed with volunteers to assist in message passing. Other events use the public address system. While yet others provide event brochures with emergency information inside. Select the most effective way to send messages at your event. If invited to, many phone companies often will provide a temporary bank of pay or credit card phones on the venue.

**Event Public Address System**

Do not rely on the sound system used by the performers to serve the internal requirements and release information to the public. Sometimes those responsible for it have refused to authorize its use except during a change of performers so an alternate venue wide PA system
is necessary to prevent delays in messages. Informing the public of information reduces the pressures on event staff. Reducing uncertainty among spectators defuses tension. A public address system is important at any event.

**Event Emergency Warning System**

Some means to inform everyone of an emergency or dangerous weather condition should be in place for every event, no matter the size. This emergency warning system must be able to operate without benefit of the main power source and be operational at all times. Ensure that the system can be heard clearly in all areas of the event. One person should be in charge of emergency communication. The Incident Commander should authorize the release of emergency messages. All involved agencies should be advised, in advance if possible, of the anticipated release of an emergency message and allowed to inform their personnel to prepare for the public’s response. Part of the planning process should be drafting sample pre-scripted messages for use in an emergency. While drafting these messages, consider using a code word or phrase to identify authentic emergency messages and to ensure that emergency personnel respond only to true emergencies.

**RUMOR CONTROL**

Rumor Control is another area that is difficult to plan for but one that you must address. Most communities have plans for rumor control during emergencies. You can respond in a similar manner to rumors during an incident at an event. As discussed in Chapter 3, the lead agency should designate a Public Information Officer. Upon designation the lead agency must determine in advance both what is going to be said and who is authorized to release information. For accuracy and to promote efficiency in rumor control, designate one source of authority.

Internal rumor control is also needed. Personnel working the event need to be kept informed through an official chain of communication, especially if an unanticipated incident occurs. Information is best disseminated through daily shift briefings that include sharing of operational objectives for the operational period.

**OCCUPATIONAL HEALTH AND SAFETY**

Since the promoter and authorities are obligated to provide for the safety of the audience, and appropriate care, safety, and training of all personnel working at the event, they should be familiar with state and local occupational health and safety legislation.

Many events rely on staff volunteers. While most public safety agencies are not allowed to use volunteers because the agencies may be liable for them, the promoter will probably use volunteers extensively and is liable for their safety. Emergency Medical Services (EMS) may use volunteers provided that they are adequately trained and certified. If the public sector
uses volunteers, they must protect the volunteers as they would protect the occupational health and safety of any other employee.

At events where noise levels are high, such as rock concerts, air shows, and motor racing events, adequate ear protection must be provided to employees who will be exposed to high noise levels for prolonged periods.

Noise pollution from events probably causes the majority of complaints to authorities from the surrounding community, and some means of monitoring and reducing noise levels should, if possible, be implemented. The permitting agency should mandate that the promoter advises the community of what to expect well in advance of the event.

**ALCOHOL, DRUGS, AND WEAPONS**

Alcohol, drugs, and weapons are potential hazards the crowd can bring to any event. They can be catalysts for, and can exacerbate, and unruly behavior in a crowd. Every community has its own laws and regulations regarding alcohol, drugs, and weapons. The following suggestions are merely guidelines.

A number of strategies that have been implemented, with varying degrees of success, in reducing the problem include:

- The prohibition of the sale and use of alcoholic beverages at events where unruly audiences are expected, or where a significant number of the patrons will be under the legal drinking age.
- If alcohol is to be sold, then low alcohol content beverages can be made available. Alcohol sale times can be controlled and beverages dispensed only in disposable cups.
- Establish an early “last call” for alcohol. For example, during major league baseball games, alcohol is not sold after the seventh inning, and during professional basketball games, it is not sold after the third quarter.
- If alcohol, weapons, and fireworks are lawful within the state, advance tickets and display advertising should contain the message that they will not be permitted into the event. Tickets and advertising should also state that purchase of tickets is deemed as constituting the patron’s consent to be searched for prohibited material prior to admission.
- Searches of personal belongings (such as jackets, purses, or bags) and confiscation of any alcohol, drugs and weapons further reduces the risk of unruly behavior.
- Signs in event parking areas and at admission gates should also display a warning to discourage patrons from bringing alcohol, drugs, or weapons into the event. There are, however, possible negative consequences to such signage. Some patrons may attempt to consume a quantity of alcohol intended for the entire event prior to entry, ultimately causing problems for the event medical staff. Alternatively, signage could also have the effect of causing spectators to leave alcohol in their cars, only to consume it in the
parking lot at the end of the event prior to departure. The most desirable action is to
discourage patrons from bringing prohibited materials to the event in the first place.

If you decide to confiscate prohibited goods, you must make arrangements for the storage
and disposal of these materials.

Two strategies which may be applied to handling all prohibited material:

- Give the spectator the option of returning it to his or her car, with a subsequent loss of
  place in line; or
- Tag it with “peel and stick” numbered stickers for return to the patron following the
  event. If, for any reason, you deem confiscation inappropriate, you can apply such a
  solution to any weapons, or materials that are potential weapons that you may find.

SECURITY

Event organizers must decide what type of security to provide and the scope of their
jurisdiction. Providing security services and the stewarding function are vital to public safety,
particularly within the venue. There are essentially three types of security that you can
provide at large public events. These are:

- Peer security,
- Police officers in uniform, and
- Private security guards in uniform.

The composition of security services will vary according to the event; one or a combination
of the three types may better serve different events.

Clearly establish the roles and responsibilities of security personnel prior to the event.
Decisions and actions taken by security personnel may affect the way emergency services
and health personnel respond to a crisis. In planning and throughout all stages of the event,
maintain a close working relationship between:

- Security personnel,
- The promoter,
- Health and medical services,
- Other police and emergency services, and
- Other security services for example those who are responsible for the performers’
  personal safety.

Special security considerations include:

- Will the event organizers or promoters use police officers for onsite security, or will they
  hire private security officers?
• If you use private security officers, what will their role and functions be, and how will their services be integrated with the police? Are they permitted to work outside the venue?
• What policies will security personnel enforce for minor offenses on site to assure that policy is enforced consistently during the event and throughout the venue?
• Will there be areas on site for the collection and storage of significant sums of money, and what security will be established to protect these areas, as well as offsite transfer or banking? Are these areas positioned near road access to avoid the risks associated with carrying large sums of money on foot through spectator areas?
• How will security personnel move high-profile persons through crowded areas?
• How will security personnel handle lost or stolen property?
• How will security personnel detect forged credentials?
• How will security personnel deal with lost children and missing persons?

You should clearly define the responsibilities and roles of security personnel before the event. These may include:

• Crowd management, including measures taken to prevent crushing;
• Control of access to stage or performance areas;
• Security control at entrances and exits;
• Minimizing risk of fire by patrolling area;
• Control of vehicle traffic and marshaling;
• Searches for alcohol, drugs, and weapons;
• Security of large sums of money and confiscated goods; and
• Assisting emergency services if necessary.

Pre-event Briefing of Security Personnel
To enable security personnel to perform their duties effectively, you must brief them appropriately prior to the event. This briefing should provide security personnel with:

• Details of the venue layout, including entrances, exits, first aid points, and any potential hazards;
• Clear direction on the management of unacceptable behavior;
• Basic information about the event such as location of first aid, lost person station, information, parking, transportation matters, and other pertinent spectator information;
• Details of emergency and evacuation plans, such as raising alarms, protocols for requesting assistance, and evacuation procedures;
• Instructions for the operation, deactivation, and isolation of any onsite machinery and utility supply in case of emergency; and
• Details of the incident communications plan and the equipment to be used.

The attitude of security personnel has a major influence on crowd compliance. Security personnel are charged with not only controlling a crowd, but also with making them feel welcome. Every individual staff member who comes into contact with the spectators plays a
role in crowd control. The dress, demeanor, and actions of staff may set behavioral expectation levels, and you should consider this fact in planning and pre-event briefing of staff.

**Deployment**

You should consider strategic deployment of security staff. All venues will have areas particularly suited to crowd monitoring and problem areas where particular attention is required. The type and size of venue may control what method of transportation the security personnel use. Are bicycles or golf carts more practical than vehicles or on foot. Indoor events are usually patrolled on foot, whereas a large outdoor area may be patrolled using bicycles, golf carts, or automobiles. The amount of time the personnel must patrol also may play a factor. Deployment considerations include:

- Identification of strategic deployment points, such as entrances and exits, barriers, and general thoroughfares;
- Establishment of strategic observation points to monitor crowd movements and behavior (a central control room with video surveillance may be required);
- Use of video “pole cameras” in densely populated areas.

**Peer Security**

Experience has shown that, in general, you can promote security for events attracting youth audiences better and more simply through the use of “peer security” - security personnel of the approximate age of the spectators who can relate to and be accepted by the youthful patron. Usually wearing brightly colored T-shirts plainly marked SECURITY. Peer security personnel provide a less confrontational security presence by avoiding the posture of rigid authority and the force that often accompanies it. As one concert organizer commented on his experience with peer security:

> They do not carry weapons and do not attempt to fill a police function. They serve as crowd monitors, people movers, and troubleshooters. Such personnel are not there to reform or catch the alcohol or drug user. . . . They concentrate on maintaining orderly crowd flow for the safety of the patrons.

You should provide appropriate guidelines for peer security personnel and stipulate limits to their authority. Duties for security at the historic Woodstock concert in 1969, which attracted 500,000 spectators, were:

> . . . keeping the peace, helping people in distress, assisting the staff of doctors and nurses, clearing paths for ambulances, seeing that areas were cleared for helicopter take-offs and landings, and guarding the stage, the performers, and all the land we hadn't rented. They did not include busting people, whether for drug offenses, nudity, obscene gestures, or sex acts. People on bad drug trips were to be handled gently until someone with experience could be found to assist.
Private Uniformed Security
Private uniformed security are probably better suited to events which attract more docile spectators, such as religious rallies, charitable dinners, and art shows, and usually will be less costly than a police presence. At events attracting crowds of more youthful exuberance, or volatile sports spectators, private uniformed security are probably more appropriately utilized in non-confrontational roles, such as ticket taking and parking cars.

Care needs to be taken to ensure that private uniformed security personnel are recruited only from reputable sources with competent and suitably trained personnel. You should discuss any special requirements for the event with the security firm.

In certain circumstances, private uniformed security can lead to problems. A uniform gives an authoritative appearance that is often not supported either by adequate training or authority in law. As a result, private uniformed security provide neither the power of police nor the rapport achieved by peer security.

Police
At many events, uniformed police perform functions, such as traffic control, and leave internal event security to private personnel employed by the organizers.

A typical crowd composed mainly of families needs 1 police officer per 1000 spectators. In a more active crowd (for example, at a sporting event where alcoholic beverages are sold), 2 police officers for every 1000 spectators are commonly employed.

Certain spectator groups may not, however, be amenable to either peer or private uniformed security, such as crowds who have historically seen violence as part of the event “culture.” While various diffusing techniques are available and should be employed, often nothing less than a contingent of uniformed police will dissuade a spectator group that enters with the expectation and intent of violence. These groups are in marked contrast to rock concert audiences who enter in a peaceful frame of mind, but may be induced to rowdiness by alcohol, shortcomings in the event, or other catalysts.

Dignitaries and Celebrity Guests
Events with invited dignitaries or in which dignitaries participate create an entirely new group of hazards and difficulties. A dignitary presence may change the level of jurisdiction and the type of security needed at the event. The planning team may not know in advance if a dignitary or celebrity is coming, therefore it is important to have contingency plans involving local agencies such as law enforcement, fire, and other to coordinate with the, state and federal agencies should a special guest arrive. Many dignitaries have their own security service which travels with them. Providing special seating for dignitaries may be necessary. Discuss the possible difficulties and hazards before allowing the promoter or sponsor to extend invitations to dignitaries.
LOST CHILD AND “MEET ME" LOCATIONS

Due to the size of an event and the number of spectators at the venue, children will inevitably be separated from their adult supervisors. Planners must designate a place for lost children to be rejoined with their guardians and have a checklist to allow information to be disseminated quickly and accurately.

Other useful areas include “meet me” locations. These are designated locations throughout the site, which are well marked and easily spotted. Patrons can plan to meet at these locations at a predetermined time, or they may use these locations should they become separated.

INFORMATION CENTER

A well-identified, well-publicized information center on site, staffed with knowledgeable persons, can reduce pressures on security, medical, and other event staff, by providing a full range of informational services to patrons. Reduction of uncertainty among spectators defuses the kind of tension that can lead to behavioral problems. To ease the burden on the public sector, the promoter should be required in the permit application process to provide this service.
Chapter 3
Incident Command and Control
CHAPTER 3: INCIDENT COMMAND AND CONTROL

INTRODUCTION

Chapter One stresses the importance of pre-event planning, organization, and leadership. It suggests a Planning Team using the Incident Command System (ICS) to effectively manage the event planning process. In a large-scale event involving numerous agencies, people can become confused as to who is in charge, what role everyone plays, and what responsibilities everyone has. ICS is an excellent tool that can resolve these issues. This chapter discusses ICS, how it can be applied to special events, and the concept of Unified Command.

Unfortunately, even the best-planned special events may not run entirely smoothly. During any special event, you must be prepared to respond to one or more incidents that may occur during the event. The way these incidents are managed has a great deal to do with the ultimate success of the special event. Everyone must know his or her role and tasking, as well as, where to seek information. This chapter also discusses the use of ICS during these situations.

INCIDENT COMMAND SYSTEM (ICS)

The Incident Command System (ICS) dates back to the early 1970s. Responding to a series of wildland fires in Southern California, municipal, state, county, and federal resources worked together to achieve a single goal. Because agency differences in communications, control, strategy management, and other leadership concerns, as well as the use of nonstandard terminology, caused many difficulties, the agencies produced a plan called FIRESCOPE to combat these problems and create centralized control. The National Fire Academy adopted this program, and the International Association of Chiefs of Police endorsed it in 1987. The federal government eventually endorsed this plan and now requires its use in any operation involving hazardous materials.

Using ICS is an excellent means of determining how resources are going to be used, who will coordinate them, and how information will be communicated using common terminology in response to a variety of matters relating to any special event. ICS is designed to assist event planners in the areas of:

- Basic management of resources,
- Organization,
- Delegation of authority,
- Coordination,
- Communication, and
- Evaluation.

Use of ICS optimizes communication and coordination, and facilitates the protection of life and property. ICS achieves this goal by establishing a protocol command structure for any
event or incident and using common terminology that ensures everyone will understand what is being said and how to acknowledge it properly. The command organization consists of an incident commander, command staff, and general staff. In some small events, the Incident Commander (IC) may handle all functions; in larger events, the IC may delegate tasks to other persons. Five functional components of ICS are implemented, as needed:

- Command,
- Planning Section,
- Operations Section,
- Logistics Section, and
- Finance/Administration Section.

In addition to the type, location, size, and expected duration of the event, the following information will help event planners develop an organizational structure to meet the management needs of the planned event:

- Does the event involve a single agency or multiple agencies?
- Does the event involve a single jurisdiction or multiple jurisdictions?
- What command staff needs exist?
- What kind, type and amounts of resources are required by the event?
- Are there any projected aviation operations?
- Are there any staging areas and other required facilities?
- What kind and type of logistical support needs are required by the event?
- Are there any known limitations or restrictions of local resources?
- What kind and type communications resources are available?

ICS can be expanded as the event demands increase in volume or complexity, and then contracted as demands diminish.

Applying ICS to special events is logical and relatively straightforward. As discussed in Chapter One, the representative from the special event’s lead agency is a likely candidate for Incident Commander. The Incident Commander or Planning Team leader could divide the event into operational periods (e.g., the day before, day of, or first 12-hours, second 12-hours, etc.). An incident action plan (IAP) is then developed for each operational period. The IAP identifies the objectives and actions of all involved agencies for that particular operational period. Planners can precisely establish what is required before and during the event. Applicable ICS IAP forms are found in the appendix of this manual.
ROLES AND EXPECTATIONS

The ICS chart above shows the five major sections that may be required to manage any event and/or incident. Branches of these sections that may also be needed are identified as well. Some events/incidents require very few functional areas, while others require activation of more. As you can see from the chart, ICS designates positions for every contingency. The job descriptions below detail what is required of persons filling the major positions.

Incident Commander

As discussed in Chapter 1, the event Incident Commander (IC) is responsible for the overall management of the special event. For most events, a single IC carries out the command activity. Certain incidents occurring during a special event may dictate the need for a specific incident commander to manage that incident. This IC should report to the overall event IC.

The overall event IC may have a deputy from his or her agency or from an assisting agency. Deputies may also be used at section and branch levels of the ICS organization. Deputies
must have the same qualifications as the persons for whom they work because they must be ready to take over those positions at any time.

**Responsibilities**—The overall event Incident Commander must:

- Ensure that all appropriate pre-event risk analyses, plans, checklists, and forms (see appendix) are completed and available to event personnel;
- Develop the mission, objectives, strategies, and command structure for the event;
- Establish immediate priorities;
- Establish an appropriately located event Command Post (CP);
- Develop an effective operational period schedule;
- Ensure that planning meetings are scheduled as required;
- Approve and authorize the implementation of an Incident Action Plan (IAP) for each operational period;
- Ensure that adequate safety measures are in place;
- Coordinate activity for all command and general staff;
- Coordinate with key people;
- Approve requests for additional resources or for the release of resources;
- Keep agency administrators informed of event/incident status;
- Approve the use of trainees, volunteers, and auxiliary personnel;
- Authorize release of information to the news media; and
- Ensure that an order the demobilization of the event/incident when appropriate.

**Safety Officer**
The Safety Officer’s function is to develop and recommend measures for assuring personnel safety and assess or anticipate hazardous and unsafe situations. Only one Safety Officer will be assigned for each event. The Safety Officer may have assistants as necessary, and the assistants may also represent assisting agencies or jurisdictions. Safety assistants may have specific responsibilities, such as air operations or hazardous materials.

**Responsibilities**—The Safety Officer should:

- Participate in all planning meetings;
- Identify hazardous situations associated with the event;
- Review the IAP for safety implications;
- Exercise emergency authority to stop or prevent unsafe acts;
- Investigate accidents that have occurred during the event;
- Assign assistants as needed; and
- Review and approve the medical plan.

**Information Officer**
The Information Officer is responsible for developing and releasing public information regarding safety matters of the event to the news media, to incident personnel, and to other appropriate agencies and organizations. Typically, the event promoter or sponsor releases
most public information and advertisements. In the case of a major incident occurring during the event including those operating under Unified Command, the Information Officer should become the sole spokesperson. The Information Officer may have assistants as necessary, and the assistants may also represent assisting agencies or jurisdictions.

Participating agencies may have conflicting policies and procedures concerning the dissemination of public information. The following major responsibilities assigned to the Information Officer apply generally to any event.

**Responsibilities**—The Information Officer should:

- Determine from the Incident Commander whether there are any limits on information release;
- Develop material for use in media briefings;
- Obtain the Incident Commander’s approval of media releases;
- Establish a media briefing area;
- Inform the media and conduct media briefings;
- Arrange for tours and other interviews or briefings that may be required;
- Obtain media information that may be useful to event planning; and
- Maintain current information summaries and/or displays on the event and provide information on the status of any incidents to assigned personnel.

**Liaison Officer**

Special events that are multi-jurisdictional or that involve several agencies may require the establishment of a Liaison Officer position on the Command Staff.

The Liaison Officer is the contact person for agency representatives assigned to the event from assisting or cooperating agencies. These representatives are personnel other than those on direct tactical assignments or those involved in Unified Command.

**Responsibilities**—The Liaison Officer should:

- Be a contact point for agency representatives;
- Maintain a list of assisting and cooperating agencies and agency representatives;
- Assist in establishing and coordinating interagency contacts;
- Keep agencies supporting the event aware of event/incident status;
- Monitor event operations to identify current or potential inter-organizational problems;
- Participate in planning meetings, providing current resource status, including limitations and capability of assisting agency resources.
Operations Section Chief

Responsibilities—The Operations Section Chief should:

- Manage tactical operations;
  - Interact with next lower level of the Operations Section (Branch, Division/Group) to develop the operations portions of the IAP, and
  - Request resources needed to implement the Operation’s tactics as a part of the IAP development;
- Assist in developing the operations portion of the IAP;
- Supervise the execution of the IAP for Operations;
  - Maintain close contact with subordinate positions, and
  - Ensure safe tactical operations;
- Request additional resources to support tactical operations;
- Approve release of resources from assigned status (not released from the event/incident);
- Make or approve expedient changes to the IAP during the operational period as necessary; and
- Maintain close communication with the IC.

Planning Section Chief

The Planning Section collects, evaluates, processes, and disseminates information for use throughout the event. When activated, the Planning Section Chief who is a member of the command staff manages the section.

Responsibilities—The Planning Section Chief should:

- Collect and process situation information about the event;
- Establish information requirements and reporting schedules for Planning Section units (Resources and Situation Units);
- Supervise preparation of the IAP;
- Provide input to the Incident Commander and Operations Section Chief in preparing the IAP;
- Establish special information collection activities (for example, weather, environmental, and toxic substances) as necessary;
- Compile and display event status information;
- Report any significant changes in the status of the event;
- Assemble information on alternative strategies;
- Provide periodic predictions on event/incident potential;
- Determine need for any specialized resources in support of the event;
- Reassign out-of-service personnel already onsite to ICS organizational positions, as appropriate; and
- Oversee preparation of event/incident demobilization plan.
Logistics Section Chief
Typically, the promoter and/or sponsor provide resources to execute the event. However, certain necessary resources and support needs may not be provided (e.g., command post, communications equipment, medical supplies, etc.), and therefore, must be procured. The Logistics Section, with the exception of aviation support, provides support needs for the event command infrastructure. The Air Support Group (in the Air Operations Branch of the Operations Section) handles aviation support. The Logistics Section Chief, who may assign a Deputy, manages the Logistics Section. A Deputy is most often assigned when all designated units within the Logistics Section are activated.

The Logistics Section Chief will determine the need to activate or deactivate a unit. If a unit is not activated, responsibility for that unit’s duties will remain with the Logistics Section Chief.

Responsibilities—The Logistics Section Chief should:

- Manage all event command infrastructure logistics;
- Provide logistical input to the Incident Commander in preparing the IAP;
- Brief Branch Directors and Unit Leaders as needed;
- Identify anticipated and known event service and support requirements;
- Request additional resources as needed;
- Review and provide input to the Communications Plan, Medical Plan and Traffic Plan;
- Supervise requests for additional resources; and
- Oversee demobilization of Logistics Section.

Finance/Administration Section Chief
The Finance/Administration Section is responsible for managing all financial aspects of the event command infrastructure. Here again, typically, the promoter and/or sponsor manage the financial aspects of most special events. However, when certain necessary resources and support needs are not provided, some means of maintaining financial accountability should be established. As such, not all event/incidents will require a Finance/Administration Section. Only when the agencies involved in responding to the event/incident have a specific need for Finance/Administration services will the section be activated.

Responsibilities—The Finance/Administration Chief should:

- Manage all financial aspects of an event’s command infrastructure;
- Provide financial and cost analysis information as requested;
- Gather pertinent information from briefings with responsible agencies;
- Develop an operating plan for the Finance/Administration Section to fill supply and support needs;
- Determine need to set up and operate an event/incident commissary;
- Meet with assisting and cooperating agency representatives as needed;
• Maintain daily contact with agency administrative headquarters on Financial/Administration matters;
• Ensure that all personnel time records are accurately completed and transmitted to home agencies, according to policy;
• Provide financial input to demobilization planning;
• Ensure that all obligation documents initiated at the event/incident are properly prepared and completed; and
• Brief agency administrative personnel on all event/incident-related financial matters needing attention or follow-up.

INCIDENTS OCCURRING DURING A SPECIAL EVENT

As discussed above, certain incidents occurring during a special event may dictate the need for a specific incident commander to manage that particular incident (e.g., isolated structure fire, vehicle crash, HAZMAT incident, structure collapse, multiple casualty incident, etc.). When an incident occurs within a special event, immediate action must be taken to control and manage the incident. As the incident grows, the issues that must be considered will grow as well. The Incident Commander of the special event may assign command of the emergency incident to a ranking responder. This responder must take initial steps to bring order to the incident as in situations requiring more traditional applications of ICS. The Incident Commander of the special event may authorize the responder to implement their own command structure and/or call upon the resources of the event command structure. This responder must:

• Assess the situation;
• Determine whether human life is at immediate risk;
• Establish the immediate priorities and objectives;
• Determine whether there are adequate and appropriate resources on-scene or ordered;
• Establish an appropriately located on-scene Command Post (CP), if needed;
• Establish an appropriate initial command structure, if needed;
• Develop an action plan;
• Ensure that adequate safety measures are in place;
• Coordinate activity for all command and general staff;
• Consider whether span of control is approaching or will soon approach practical limits, taking into account safety of personnel;
• Determine whether there are any environmental concerns that must be considered;
• Monitor work progress – coordinate with key people;
• Review and modify objectives and adjust the action plan as necessary.
• Approve requests for additional resources or for the release of resources;
• Keep the overall event Incident Commander informed of incident status;
• Authorize release of information to the news media; and
• Order the demobilization of the incident when appropriate.
TRANSFER OF COMMAND

In prolonged events, it is likely that a change of command may take place. When transfer of command is necessary, the transfer must be made as efficiently as possible and in person, whenever possible. To transfer command, the person being relieved must brief the incoming Incident Commander to provide information about:

- The incident conditions including:
  - Event history (what has happened so far),
  - The IAP and its current status,
  - Priorities and objectives,
  - Current event organization,
  - Current resource assignments,
  - Resources ordered/needed,
  - Status of communications
  - The IAP and its current status.
- Safety considerations and concerns.
- Deployment and assignment of operating units and personnel.
- Constraints or limitations on response agencies, and
- Incident potential.

ICS Form 201 is well designed for briefings (a copy of this form is provided in the appendix) because it contains a place for a sketch map, a place to write a summary of current actions and organizational framework, and a place to summarize resources. Sections of the form can be separated from the document and given to ICS sections to complete as needed.

Be aware that changes may cause disruptions and should be implemented at the start of operational periods whenever possible. Finally, once command has been transferred, ensure that all personnel and communications centers are notified of the transfer of command.

UNIFIED COMMAND

ICS is built from the Unified Command concept. Unified Command is a term referring to shared responsibility for event management using either single agency multi-jurisdiction or multiple agencies. A clear line of authority for decision-making must always be in place.

ICS offers two options for command, as follows:

- **Single Command**, in which there is no overlap of jurisdiction or when the agency in charge designates Single Incident Command; or
• **Unified Command**, when more than one agency shares responsibility for responding to, or participating in, the event/incident. Unified Command means that all agencies contribute to the command process by determining goals and objectives, jointly planning activities, conducting integrated tactical operations, and maximizing all resources. Unified command is also used when an event/incident is multi-jurisdictional or when more than one individual shares overall management responsibility.

Unified Command is a team effort process, allowing all agencies with responsibility for an incident, either geographical or functional, to establish a common set of incident objectives and strategies to which all can subscribe. This set of objectives and strategies is accomplished without losing or abdicating agency authority, responsibility, or accountability. Unified Command is not a new organization; the U.S. military has used similar command structures in joint operations for years.

There are four elements to consider when applying Unified Command to an event/incident:

**Policies, Objectives, Strategies**
In joint military operations, setting the policy, objectives, and strategy is the responsibility of the coalition of countries operating within the United Nations mandate. In ICS, this responsibility belongs to the various jurisdictional and agency administrators who set policy and are accountable to their agencies. This activity is accomplished in advance of tactical operations, and it may be coordinated from some location other than the one where the direct action takes place.

**Organization**
In joint military operations, Unified Command organization consists of the unified Force Command established at the scene. In ICS, Unified Command organization consists of the various jurisdictional or agency on-scene senior representatives (agency Incident Commanders).

**Resources**
In joint military operations, resources include of all of the U.S. armed services, plus various service elements from other countries. In ICS Unified Command, resources are the personnel and equipment supplied by the jurisdictions and agencies that have functional or jurisdictional responsibility for the IAP.

**Operations**
In joint military operations, after the objectives, strategies, and interagency agreements are decided, a single Force Commander is designated to develop tactical action plans and to direct tactical operations. In ICS/Unified Command, that person is the Operations Section Chief.

In both joint military operations and ICS Unified Command, resources remain under the administrative and policy control of their agencies. However, they respond operationally to
mission assignment under the coordination and direction of the Force Commander or Operations Section Chief, depending upon the requirements of the action plan.

Unified Command represents an important element in increasing the effectiveness of multi-jurisdictional or multi-agency events/incidents. As events/incidents become more complex and involve more agencies, the need for Unified Command becomes even greater.

The advantages of using Unified Command include:

- A single set of objectives developed for the entire event/incident;
- A collective approach made to develop strategies to achieve event/incident goals;
- Improved information flow and coordination among all jurisdictions and agencies involved in the IAP;
- An understanding among agencies of respective priorities and restrictions regarding responsibility for the IAP;
- No compromise or neglect of an agency’s authority or legal requirements;
- An awareness among agencies of respective plans, actions, and constraints;
- An optimized combined effort of all agencies performing their respective assignments under a single IAP; and
- A reduction or elimination of duplicative efforts, thus reducing cost and chances for frustration and conflict.

Using Unified Command is practical and cost effective. Agencies can improve incident management and achieve goals in a timely, cost-effective manner.

UNIFIED COMMAND ORGANIZATION

Five important features of a Unified Command organization include a single, integrated incident organization; collocated facilities; a single planning process and IAP; shared planning, logistical, and finance sections; and unified resource ordering.

A Single Integrated Incident Organization

Under Unified Command, the various jurisdictions or agencies are blended together into an integrated, unified team. The resulting organization may be a mix of personnel from several jurisdictions or from a single agency, each performing appropriate functions and working toward a common set of objectives. The proper mix of participants in a Unified Command organization will depend on:

- The location of the event/incident, which often determines the jurisdictions which must be involved; and
- The kind of event/incident, which dictates the functional agencies of the involved jurisdiction(s), as well as other associated agencies.
In a multi-jurisdictional response to an event/incident, a Unified Command structure could consist of a single responsible official from each jurisdiction. In other cases, Unified Command may consist of several functional department managers or assigned representatives from within a single political jurisdiction.

**Co-located Facilities**
By bringing the responsible officials, command staffs, and planning elements together in a single Incident Command Post, a coordinated effort can be maintained for as long as the Unified Command structure is required.

One base or command post can serve the needs of multiple agencies. Similarly, resources from several agencies can be brought together in staging areas.

**A Single Planning Process and IAP**
Electing participants to work in Unified Command depends on the location and the type of event/incident. A Unified Command structure may comprise one principal official from each jurisdiction or representatives from several responders. Since the Operations Section is the agency with greatest involvement, the Operations Section chief usually implements the IAP. In a Unified Command, all agencies involved contribute to the command process.

Every event needs an IAP. Action plans may be written or verbal, although best if written. Either type must cover strategic goals, tactical objectives, and needed support. If an event is prolonged, it may require more than one action plan.

If the gathering is large and multiple events are taking place simultaneously, one feature of the IAP may be an event/incident timeline showing the sequence of events and their locations.

The planning process for Unified Command is similar to that used in Single Incident Command. However, one important distinction is the need in Unified Command for every jurisdictional or functional agency’s Incident Commander to participate in a Command Meeting before creating the joint IAP in the first operational meeting.

This initial Command Meeting provides the responsible agency officials with an opportunity to discuss and concur on important issues before the joint IAP is created.

Command Meeting requirements include the following:

- The Command Meeting should include only agency Incident Commanders.
- The meeting should be brief, and important points should be documented.
- Prior to the meeting, the respective responsible officials should have reviewed the meeting’s purposes and agenda items (described above) and be prepared to discuss them.

Officials attending the initial Command Meeting should:
Incident Command and Control

- State jurisdictional/agency priorities and objectives;
- Present jurisdictional limitations, concerns, and restrictions;
- Develop a collective set of event/incident objectives;
- Establish and agree on acceptable priorities;
- Adopt a general, overall strategy or strategies to accomplish objectives;
- Agree on the basic Unified Command organizational structure;
- Designate the best-qualified and most acceptable Operations Section Chief;
- Agree on General Staff personnel designations and planning, logistical, and finance agreements and procedures;
- Agree on the resource ordering process to be followed;
- Agree on cost-sharing procedures;
- Agree on informational matters;
- Designate a single agency official to act as the Unified Command spokesperson.

Incident Action Planning meetings will use the results of the Command Meeting to determine:

- Tactical operations for the next operational period;
- Resource requirements and resource availability and sources;
- Resource assignments;
- The unified Operations Section organization; and
- Combined Planning, Logistics, and Finance/Administration operations, as needed.

The result of the planning process will be an IAP that addresses multi-jurisdictional or multi-agency priorities and provides tactical operations and resource assignments for the unified effort.

Shared Planning, Logistics, Finance/Administration Sections

The Unified Command incident organization can also benefit by integrating multi-jurisdictional and/or multi-agency personnel into various other functional areas.

For example, in the Operations and Planning Sections, Deputy Section chiefs can be designated from an adjacent jurisdiction which may, in future operational periods, have the primary responsibility for these functions.

By placing other agencies’ personnel in the Planning Section’s Situation, Resources, and Demobilization units, significant savings in personnel, and increased communication and information sharing will often result.

In the Logistics Section, a deputy Logistics Section Chief from another agency or jurisdiction can help to coordinate event/incident support as well as facilitate resource-ordering activities. Placing other agencies’ personnel into the Communications Section helps in developing a single event/incident-wide Communications Plan.
Although the Finance/Administration Section often has detailed and agency-specific procedures to follow, cost savings may be realized through agreements on cost sharing for essential services. For example, one agency might provide food services, another fuel, and a third security.

**Unified Command Resource Ordering**

An important advantage of Unified Command over Single Incident Command is the ability of commanders to establish resource-ordering procedures before the Incident Action Planning meeting. During the Command Meeting, commanders can designate specific kinds and types of resources to be supplied by certain jurisdictions or agencies in the resource-ordering procedures. This designation depends upon the previous commitments of the responsible agency officials.

Following the Command Meeting, the Incident Action Planning meeting will determine resource requirements for all levels of the organization. The nature and location of the event/incident will, to some extent, dictate the most effective offsite resource-ordering procedure.

These resource requirements established at the Incident Action Planning meeting are given to the Logistics Section, which then creates a single resource order that is transmitted to a single agency responsible for filling the order. (Some situations may require multiple resource orders to be transmitted to multiple agencies. However, multiple resource orders are generally less desirable than a single resource order, and they should be avoided when possible.) The agency then fills the order from the closest available resource.

Having resource-ordering procedures in place before the Incident Action Planning meeting determines resource requirements ensures that the agency filling the resource order can do so quickly and effectively.

**Functioning in Unified Command**

It is essential to understand how an Incident Command System (ICS) Unified Command functions. Knowledge of ICS principles of organization will enable managers to accept and easily adapt to a Unified Command mode of operation when it is required. Lack of knowledge about ICS can limit the willingness of some jurisdictions or agencies to participate in Unified Command incident organization. It is impossible to implement Unified Command unless all affected agencies have agreed to participate in the command structure.

Establishing a single Incident Command Post is essential to success. Other facilities where all agencies can operate together may be established as needed. Avoid the confusion created by separate command, planning, and logistics setups.

Begin action planning as early as possible after the notification of an event/incident. Initiate Unified Command as soon as two or more agencies having jurisdictional or functional responsibilities participate in, or respond to, the event or incident. Where conflicting
priorities based on agency responsibilities exist, early initiation of Unified Command is especially important.

The Operations Section Chief will normally be chosen from the jurisdiction or agency that has the greatest involvement in the event/incident, although this association is not essential.

However, the Operations Section Chief should be the most qualified and most experienced person. The selection of the Operations Section Chief must be agreed upon by the Unified Command because he or she will have full authority to implement the operations portion of the IAP. The Unified Command must also agree on other General Staff personnel who will be implementing their portions of the IAP.

If necessary, the Unified Command may designate one of the Incident Commanders to act as a spokesperson. The Incident Commanders may see the need to identify one among them to act as an Operational Period Duty Officer and/or spokesperson for the Unified Command.

Designating a spokesperson can provide a channel of communications from the General and Command Staff members into the Unified Command structure. The spokesperson does not make Unified Command decisions, but does provide a point of contact as necessary for the General and Command Staffs.

Finally, it is important to conduct discussions of Unified Command with adjacent jurisdictions and functional agencies whenever possible.

Individually and collectively, the designated agency Incident Commanders (ICs) functioning in a Unified Command have the following responsibilities at an event/incident:

- They must clearly understand their jurisdictional or agency limitations. Any legal, political, jurisdictional, or safety restrictions must be identified and made known to all.
- They must be authorized to perform specific activities and actions on behalf of the jurisdiction or agency they represent. These actions could include:
  - Ordering of additional resources in support of the IAP;
  - Loaning or sharing the resources of other jurisdictions; and
  - Agreeing to cost-sharing arrangements with participating agencies.

The agencies ICs have the responsibility to manage the event/incident to the best of their abilities. This responsibility includes:

- Working closely with the other ICs in the Unified Command;
- Providing sufficient qualified staff and resources;
- Anticipating and resolving problems;
- Delegating authority as needed;
- Inspecting and evaluating performance; and
Communicating with their own agencies to establish priorities, plans, problems, and progress.

The members of the Unified Command must function together as a team, ensuring effective coordination of the IAP. In many ways, this is the most important function they perform in Unified Command.

Manageable span or control is another aspect of ICS. Manageable span is defined as the number of subordinates one supervisor can manage effectively. Guidelines suggest from three to seven persons, with five persons being the optimum number.

The Command Post (CP) is the center for directing all operations, and only one Command Post operates during an event. Usually the Incident Commander, the Planning Section, the communications center, and all agency representatives have offices there.

A joint news center may be helpful during an event/incident. At a joint news center, the local media may congregate to receive information and use the area as a workspace. Providing the media with information, rather than making them track it down, ensures the dissemination of accurate information and prevents difficulties arising from rumors. Depending on the size and type of event, the Incident Commander may appoint a liaison.

**Public Safety Roles in Unified Command**

After the Incident Commanders (ICs) determine a command structure, they should identify the roles of public safety personnel. They must bear in mind that all public safety organizations must also be able to answer their normal responsibilities as well as to provide staffing for the event. The promoter must cover the cost for any public safety personnel responding to an event/incident.

The role of emergency management is to complement and support local first responders and to coordinate and facilitate the flow of required responses to the Incident Commander as needed.

The role of law enforcement may be to provide:

- Crowd management, including measures to prevent crushing;
- Control of access to stage or performance areas;
- Security control at entrances and exits;
- Patrol to minimize risk of fire;
- Control of vehicle traffic and marshaling;
- Searches for drugs, alcohol, and weapons;
- Security for large sums of money and confiscated goods; and
- Assistance for emergency services, as needed.

Depending upon jurisdiction, the role of fire fighters may vary. Tasking to the fire departments and department capabilities differ for every community.
Emergency medical services may be called upon to render first aid to personnel attending the event. They may also work in cooperation with public health to provide more in-depth, onsite medical care in the form of site and field hospitals or to transport people to local medical facilities.

**FEDERAL AND STATE RESOURCES**

If an incident occurs that is beyond the capability of the local authorities, a community may have to request the assistance of state or federal assets through the Emergency Management Agency. The event planners should be prepared to discuss the event and the locations of all the risks with the state and federal authorities as needed. Providing a strip map to state or federal responders will help them locate areas in the event, especially if smoke or debris make locating areas difficult. Research your support and your capabilities at every level; the Emergency Management Agency may be of assistance in locating the agency or assistance for the community.

One way of sharing resources is through local mutual aid agreements. These agreements allow local agencies to borrow equipment and resources from neighboring communities. They also allow the lending community to be covered under the borrowing community’s insurance. For example, if a community needs to borrow a pumping unit from a community three towns away and the pumping truck is damaged or is involved in an accident, the borrowing community’s insurance will be responsible for damages, repairs or replacement to equipment. Sharing of resources is especially useful in smaller communities where budgets may not allow for extensive equipment.

Depending on event size and needs, the Incident Command System can be very simple or complex. For more information on ICS, contact the Emergency Management Institute or visit the FEMA website, www.FEMA.gov/EMI.
CHAPTER 4: SPECIAL PLANNING FOR HIGH-RISK EVENTS

INTRODUCTION

Some events contain more risks than others, and they require special planning well in advance of the event. This chapter provides some examples of high-risk events and suggests ways to prepare for emergencies that may occur during those events. Planners should ensure personnel are trained and equipped for the unique nature of these events. Another way to learn of these risks is to check with other agencies to gain additional information. For each of these high-risk events, weather is a critical factor you must consider.

POWER BOAT RACES AND SIMILAR AQUATIC EVENTS

Before any outdoor event begins, check with the proper agencies such as the Coast Guard, natural resources, or other applicable agencies.

Medical Support for Participants
Aquatic events, particularly those involving motorized watercraft, require careful planning. A dedicated medical response boat should be available in the water with appropriately trained personnel and equipment, including a spinal board and resuscitation equipment. The medical boat should be linked by two-way radio to the rescue boats and ambulance/medical services. For offshore boat racing, consider a helicopter with rescue capabilities.

A rescue boat should be in attendance with experienced divers, equipped with scuba gear, to remove personnel trapped underwater.

Identify landing locations appropriate for the transfer of patients on stretchers from boats to land ambulances.

Spectator Areas
Appropriate buffer walls or “run off” areas should be established to prevent out-of-control vessels from entering spectator and pit areas.

Where spectators are permitted to line piers and breakwaters along areas of deep water, observe the following practices:

- In the absence of some physical barrier, mark a line to warn spectators away from the edges fronting deep water.
- In addition to any vessel committed to assisting event participants, a dedicated boat should constantly patrol the spectator area. It should be equipped with a loud speaker
to warn spectators who venture too close to the edge. The boat should also be suitably equipped to provide water rescue and the resuscitation of injured people.

All boats intended for rescue, or designated to provide medical attention, should be clearly marked and equipped with some form of hazard lighting to warn other vessels off. Any boats used for participant or spectator control should be staffed with personnel trained in appropriate lifesaving and emergency medical practices, including CPR.

Any boat intended for medical assistance or water rescue should contain sufficient clear space to resuscitate the prone human form and be equipped, at a minimum, with the following:

- Automatic External Defibrillator (AED);
- A spinal board for full-body immobilization, plus cervical collars and restraint straps;
- Ventilation equipment, which should ideally be a positive pressure oxygen ventilator, or as a minimum, a bag-valve-mask unit, preferably with oxygen assist (oropharyngeal airways and suction should also be included);
- A supply of large pressure dressings;
- Personnel trained and experienced in the use of the equipment identified above; and
- Personnel trained and attired to perform water rescue and removal.

**AUTOMOBILE AND SIMILAR RACES**

While aquatic events present hazards to participants and spectators, and difficulties to event planners and incident responders not faced in other events, some types of auto racing also present unique areas of concern.

Sponsors of organized auto races conducted by professional racing organizations at permanent facilities normally meet the safety guidelines required for participants as outlined in this document. Similarly, professional racing organizations using temporary facilities follow very strict guidelines.

However, for racing events conducted by local clubs, no formal safety guidelines exist to cover the health and safety of participants and spectators. Motor Cross races, bicycle races, and specialized automobile rallies are a source of great concern because of the very limited control exercised over spectators and the often-remote locations. Spectators invariably position themselves in remote, almost inaccessible, areas where the action is expected to be spectacular. The entire course should be monitored as well as possible, and a suitable communications system should be in place.

**Medical Support for Participants**

In the event of a crash, an ambulance with a trained staff should be available immediately. The medical support staff must understand the racing rules and be trained to recognize the various flags and special warning lights used by race officials.
Special Planning for High-Risk Events

Understanding the racing rules and the signals ensures that the staff knows how soon another racing vehicle will arrive at the accident scene, whether or not the crashed vehicle remains on the track.

At smaller club events, having an ambulance on stand-by may be cost prohibitive, and other suitable arrangements must be made. In such circumstances, a dedicated vehicle with appropriate equipment and trained personnel should be available to serve as the ambulance. The vehicle should not be merely a van with basic equipment provided as an ad hoc measure.

The standby ambulance or other emergency vehicle should be positioned for controlled, rapid access to the track. An appropriate communications system and acknowledged procedures should be in place to activate an immediate ambulance response to a track emergency, while track officials modify racing.

Guidelines should be established in advance to determine:

- Whether the race will continue if the ambulance leaves to transport a patient and no back-up ambulance is available to take its place; and
- Whether the ambulance will be dedicated strictly to the participants, and if so, what means are available to assist with medical emergencies among the spectators.

If possible, the race should be stopped when an ambulance or other emergency vehicle is on the track, even though some races continue to run under the caution flag.

Suitable “first attack” fire fighting and rescue equipment should also be available at the track. If onsite resources are not able to successfully respond to an emergency, procedures to obtain additional rapid fire and rescue service must be in place.

If you expect great risk to participants and spectators, large numbers of spectators, or if the nearest hospital is very far, consider providing a site hospital.

Spectator Areas
Barriers should be in place to isolate spectators from out-of-control vehicles. Further enhance safety by posting a compulsory “no man’s land” to keep spectators away from the barrier fence. Experience shows that these barriers can be moved or broken by out-of-control vehicles, resulting in injuries to spectators who are leaning against the barriers.

When personnel design barrier height and strength, they should take into account the possibility that one vehicle may mount another or somersault end over end. A barrier intended to retard penetration by a single impacting vehicle is insufficient.

In addition, parts of automobiles involved in collisions can become projectiles, and wheels can come loose and bounce into spectator areas. To protect spectators, affix a
strong wire-mesh debris screen to the barrier fencing and to the tops of retaining walls. The wire-mesh screen permits spectator visibility while serving as a trap for projectiles.

Carefully monitor spectator access, if you permit any spectators to the track and pit areas at any time, including after the race. Participants often test vehicles after the event, with neither drivers nor spectators anticipating each other’s presence on the track.

Spectators invading the track after the winner has passed the finish line, but while other competitors are still racing, have caused major problems including injuries at a number of events. All officials should be briefed on ways to control spectators who intend to invade the track and how to respond should those control measures fail.

**Pit Areas**

In-race refueling of cars in pit areas creates a potential for fire if fuel inadvertently contacts hot parts or is ignited by a spark. To counter this threat, appropriate and sufficiently large fire extinguishers, or some other suitable equipment for extinguishing fire, must be available at refueling sites for use by trained personnel. Remind personnel that some racing fuels burn with an invisible flame.

The combination of vehicles entering the pit lane at high speed and the drivers’ vision being obstructed by barriers increases the risk to both drivers and pit crews. Organizers should consider introducing speed limits in pit lanes and enforcing suitable penalties for transgressions by drivers. Ideally, organizers should also implement a system of notifying pit personnel when vehicles are entering the pits, such as a siren or horn.

Because spectators are generally unfamiliar with pit environments and procedures, organizers should restrict access to the pits to officials and members of the race crews. If you permit spectators in the pit area, you must properly control them, taking into consideration the need to protect them from pit hazards, such as moving vehicles, hot engine parts, and sharp metal.

If possible, organizers should not permit spectators to cross the racetrack. If you allow spectators to cross the track, then restrict all spectator crossings to designated crossing points that are strictly controlled by race officials. Officials should be equipped with an efficient communication system connected to the race control area, which can provide information about upcoming race traffic.

**AIR SHOWS AND DISPLAYS**

The hazards presented by air events are similar to those already discussed, with a few hazards being unique to these events.
Although air shows are usually staged in accordance with aviation rules and regulations, event organizers, emergency managers, and health personnel should take specific steps to reduce the risk of a serious incident.

**Acrobatic Areas**
Acrobatic maneuvers should not take place over built-up areas, but over fields, water, airstrips, or other uninhabited areas. Aircraft should not fly over spectator areas. Where aircraft exit a maneuver laterally (parallel to the ground) the direction of exit should be away from, or parallel to, the spectators, not towards or over them.

**Safety**
Onsite fire services should be capable of delivering fire-suppressing foam onto a crashed or burning aircraft. If the air show does not take place at an airport with foam-equipped trucks, consider alternate arrangements for their provision, because water-delivering fire apparatus is unsatisfactory.

Organizers should clearly understand the requirements of the coroner and air crash investigators and be prepared to assist in the event of a mishap.

Contingency plans should state how personnel will interact with spectators following an incident (that is, cancel the show, hold closest spectators as witnesses, or request home video cameras which might have recorded the incident).

**Parachute Jumps**
Parachute jumps should designate landing zones that are safely away from spectators and create no obvious hazards to the jumpers. Parachutists can be blown off course and suffer injury or death as a result. Spectators can also be injured in the scramble to avoid a descending jumper.

**FIREWORKS/PYROTECHNICS**
Shows involving fireworks or pyrotechnics also present specific risks. When event organizers plan public displays of fireworks, they should notify and consult with the local authorities, including police, fire, and emergency medical services prior to the event. Most pyrotechnic providers or contractors follow OSHA safety standards for the placement of spectator seating and fireworks launch sites.

**Placement of Launch Site**
Most major incidents involving fireworks can be avoided through careful design of the launch site.

In establishing a launch site, organizers must pay close attention to the anticipated or prevailing wind direction and strength, both of which may affect the flight path of fireworks and the area where debris will fall. In addition, when you establish site
placement and design, prepare for the possibility of abandoning the display in an emergency.

Where possible, the launch site should be on water (for example, on a barge or pier), enabling personnel to easily abandon the site if an accident occurs and the pyrotechnic supply ignites.

A barrier must be erected between the crowd and the launch site in order to protect the crowd if fireworks tip over after ignition, resulting in a lateral, rather than vertical, projection.

Fireworks must not be projected over the heads of spectators because debris is often hot and can injure spectators if it falls into their eyes or onto their heads. Another concern is health effects due to the smoke. Anticipate potential respiratory difficulties, especially in those spectators prone to breathing problems such as asthma and allergies.

If you launch fireworks over water, do not project them over flammable trees, bush areas, buildings, or boats.

Store unused fireworks in covered metal containers to prevent accidental ignition, either by staff or by descending hot particles from previously ignited fireworks.

Fire equipment, including fire extinguishers appropriate to the location, and trained firefighters should be immediately available at the launch site.

Personnel deploying and igniting fireworks should wear protective clothing, including face shields, helmets, and heavy gloves, in case of explosion or premature or delayed ignition.

After the event, personnel should carefully inspect the launch site and surrounding area to ensure that no incipient or rekindled fires are possible. All used fireworks should be soaked in water and removed from the site, along with any securing spikes, wires, or other potentially hazardous objects.

LASERS

Laser light shows are now frequently included as a form of entertainment at many special events. Prior to the laser light show, health care personnel on site should understand the kinds of accidents that can occur and identify potential hazards when lasers are used. They also should know the kind and type of laser that will be used.
SPONTANEOUS EVENTS

Occasionally an event occurs without planning. Local emergency management and public safety agencies need to be aware that spontaneous events create the same need for emergency response contingencies as planned events and that safety plans or agreed-upon roles and responsibilities for participants will be established. Such spontaneous events present unique difficulties to public safety personnel because they offer no warning and, therefore, no time to plan.

Types of spontaneous events include those which:

- Are planned without official input or permits as a result of an oversight;
- Are planned without official input or permits on purpose;
- Result from other events:
  - Planned local spin off, such as a victory parade for a local sports team,
  - Local focal point, or
  - Response to an "under-planned" primary event; and
- Are demonstrations, protests, or picketing:
  - Civil disobedience,
  - Planned disorderly behavior, or
  - Spontaneous violence.

Pre-existing mutual aid agreements, response plans, training, and resource lists will assist communities that are confronted with a spontaneous event. To develop these pre-existing response aides, the local emergency management agency may act as a catalyst to promote cooperation among local response agencies. Local emergency management can also fill its role in the Emergency Operation Center (EOC) if the spontaneous event is large enough to require the EOC activation.

Because they are dynamic, a well-timed and appropriate response is critical to safe outcomes of these spontaneous events. However, in many instances, the local or county public safety officials on duty are initially charged with all the roles and responsibilities of managing the spontaneous event. At the same time, they are faced with other non-event incidents in the community. If communities train to respond to the various incidents associated with a spontaneous event, they can more effectively respond in times of emergency.

Staffing, response, and public safety requirements for spontaneous events are the same or greater than those for a planned event of the same nature. Essential to the successful outcome of a spontaneous event is implementing the Incident Command System (ICS) of management for an orderly and coordinated deployment of resources and personnel.
Special Planning for High-Risk Events

Identifying a staging area where additional personnel and resources will be gathered is necessary. Briefing all personnel and establishing an appropriate span of control is critical to pre-deployment of personnel and resources in response to a spontaneous event. Establishing a situation unit in the Planning Section of the ICS designed to keep the incident commander informed of changes in the nature of the event may be necessary.

Another essential element in anticipation of and pre-planning for a spontaneous event is a continuing evaluation of other events, either locally or nationally, that may be catalysts for a spontaneous event in your community. Many spontaneous events occur with some level of expectation by public safety officials. The significant difference between an organized special event and a spontaneous event is that no planning time exists before a spontaneous event.

If a spontaneous event or unplanned mass gathering occurs in your community, time is critical and should not be wasted trying to determine how the event happened and who will be held responsible. After-action reports and investigations can fulfill that role. Critical time management requires that all energy be focused on response and activation of pre-existing plans and cooperation among participating agencies.

EVENTS INVOLVING PRE-TEEN AND EARLY TEEN AUDIENCES

Concerts that attract younger audiences (for example, pre-teens and early teens) can create a number of difficulties. These spectators can become lost or separated from friends, miss scheduled return transportation, or lack sufficient funds to pay for alternate transportation.

Parents will often take young spectators to such events and then have difficulty finding them at the conclusion. If parents are using their cars to pick up children, traffic jams may prevent close access to the venue. Prior to entering the venue, parents and their children should identify a specific place to meet at the conclusion of the event.

One method to alleviate difficulties is to create a “Parents' Oasis” adjacent to the venue to provide parents with a waiting area during the concert. Coffee, soft drinks, snacks, and newspapers can be available to help parents pass the time they spend waiting.

The concept of a “Parents' Oasis” is one that is particularly well-suited to concert events that parents would not want to attend and that their children would not want them to attend. The additional cost and effort devoted to providing such a facility are more than offset by the reduction in efforts needed to deal with the young audiences at the conclusion of the event.

Information booths with access to the public address system and clearly identified event staff can assist lost children and their parents. Also consider the compounding effect of a major incident exacerbated by the problems of parents attempting to gain access to the
area in order to be re-united with their children or, in the worst-case scenario, trying to find out where their injured children have been taken.

As you have seen, events may pose hazards and risks unique to their activity or audience. This unit presented some of the particular hazards and high-risks that event planners need to be aware of. By no means are these all the risks to which a response must be prepared. Careful planning and expecting the unexpected helps make the special event memorable and safe for sponsors, participants, and spectators.
Chapter 5
Terrorism and Criminal Activities
CHAPTER 5: TERRORISM AND CRIMINAL ACTIVITIES

INTRODUCTION

Unfortunately, every event planner must consider the risks arising from terrorism and criminal activities. The planner must view the event as a potential target and be prepared for any incident. This chapter provides some basic information on terrorism and criminal activities.

Although terrorist and criminal attacks may seem remote possibilities and quite unlikely to occur in the community, event planners and public safety personnel must, nevertheless, plan for their occurrence. Special events and mass gatherings are a perfect target due to the large number of people, media coverage, and the high profile impact if a terrorist hits.

CONTEMPORARY TERRORISM

Prior to the beginning of this decade, terrorism was thought to be something that happened outside the United States and was committed by left-wing extremists to promote ethnic, religious, or socio-economic causes. Before 1993, the United States essentially viewed terrorism as an international event occurring outside this country that sometimes affected U.S. interests. Terrorist acts affecting the United States were primarily directed against United States interests in foreign countries (for example, businesses, military installations, and embassies). The FBI has determined that contemporary terrorists generally:

- Are politically motivated;
- Have sought and used publicity to gain recognition and public sentiment;
- Have most often viewed, trained, and equipped themselves as an army at war;
- Have sought to cross jurisdictional lines to further confound law enforcement detection and apprehension;
- Had the support and funding of national governments from outside the United States; and
- Invited public scrutiny in order to put law enforcement on trial by effective use of the media.

DOMESTIC TERRORISM

The bombing of the World Trade Center in February 1993 led to a new awareness of terrorism in this country - domestic terrorism. This event was eventually tied to left-wing extremists of the Palestine Liberation Army who acted in retaliation for American
Special Events Contingency Planning

Terrorism and Criminal Activities

political, economic, and military support of Israel. With the shift to terrorist events occurring within U.S. borders, a new challenge was created for American law enforcement. The FBI now defines terrorism as:

“... the unlawful use of force or violence against persons or property to intimidate or coerce a government, the civilian population, or any segment thereof, in furtherance of political and social objectives.”

Since the World Trade Center bombing, the responsibility for a majority of domestic terrorist activity in the U.S. has shifted from the contemporary international terrorist to the domestic terrorist. For the most part, domestic terrorists can be identified as extremists with strong anti-government feelings. Some are:

- Associated with hate groups;
- Opposed to taxes;
- Defined by religion;
- Ardent believers in a strong constitution; and
- Radical, issues-oriented groups.

Between January 1997 and July 1, 1998, domestic incidents identified as the responsibility of these extremist groups occurred almost daily. The actual number of terrorist acts is probably much larger than the daily count because many law enforcement agencies have not been trained to recognize this activity and probably reported many of these terrorist acts as ordinary crimes.

THREAT ASSESSMENT

Planning and intelligence gathering are necessary activities for law enforcement during event planning. The level of commitment to these anti-terrorist activities influences the level of response capabilities that should be maintained.

Two terms that event planners should understand are anti-terrorism and counter-terrorism:

- Anti-terrorism is a term used to define actions taken to mitigate potential effects of terrorist activity.
- Counter-terrorism is best defined as operational actions taken or activities planned to prevent a terrorist activity or event.

Targets
Most targets singled out by terrorist groups fall into one of five areas:

- Cosmetic or public message targets,
Terrorism and Criminal Activities

- Non-military government targets,
- Military targets,
- People targets, and
- Cyber-terrorism and information warfare targets.

Each of these targets is usually identifiable within a jurisdiction. Agencies must also keep in mind that the emerging issue of cyber-terrorism allows perpetrators to strike from remote areas anywhere in the world. In 1997 alone, the Pentagon computer system was the target of 6,000 infiltration attempts by computer hackers. The success rate by those hackers was ten percent. This country’s air traffic control system and the state’s power grid system are vulnerable to terrorist groups who are sufficiently knowledgeable to infiltrate these systems.

**Motives**
The motives of extremist groups can generally be identified as:

- Political,
- Religious,
- Racial,
- Environmental, or
- Special interest.

**Weaknesses in Measuring Threat**
Terrorist threats are often difficult to measure because they are:

- Dynamic,
- Mobile,
- Difficult to recognize (lone offenders, splinter groups),
- Ease and availability of creating a WMD device, and
- Difficult to quantify-subjective (open to interpretation, tendency towards inflating results).

Dangers of information sharing (outside the law enforcement community) also make it difficult to measure the extent of the threat because unauthorized disclosure of information may:

- Lead to violation of operational security;
- Create unnecessary panic; and
- Produce unintended media attention.
Basis of the Assessment Process

Capability and Intent = Threat
Threat and Vulnerability = Risk
Risk and Capabilities = Needs

The United States Congress based their decision largely on advice from the U.S. General Accounting Office, who opined that the particular assessment process look at the capabilities and intentions of specific subject groups and / or individuals when assessing the threat. This represents the foundation of the threat process well known to the law enforcement and intelligence communities.

Based on this foundation, the assessment process was developed. This process looks at the capability to produce and deploy a WMD and the intent of a specific threat element to do so. Without the mutual existence of capability and intent, no imminent threat can be said to exist. Once relative threat levels have been established, an assessment team may assess the risk to a particular jurisdiction. This involves the evaluation of existing vulnerabilities to safeguard and prevent an attack in a particular jurisdiction against the existing threat.

VULNERABILITY ASSESSMENT

In the cases of the jurisdictional domestic preparedness strategy development process, it is the selection of your critical infrastructure and applying seven factors to that infrastructure to determine weaknesses in your jurisdictional capability to respond to the incidents covered by your Jurisdiction Emergency Response / Operations Plan. These vulnerabilities are specifically directed at WMD terrorism or WMD incident response.

This assessment is a critical part in the development of the jurisdiction strategy and determines an internal environmental factor for the jurisdiction to improve their capability to respond to a WMD terrorism or WMD incident. This focuses the jurisdiction’s ability to take care of its citizens.

The outcomes of this assessment will be an inventory of the critical infrastructure within the jurisdiction and a assessment of how easily it can be disrupted.

STATE ROLES IN READINESS AND RESPONSE

An integrated approach between the local, state, and federal government makes a logical clearinghouse for intelligence on the movement and activities of terrorist groups and the collection, interpretation, and dissemination of that information to the proper enforcement agencies. A proactive role in planning and intelligence gathering will lessen the likelihood of a surprise emergency incident, which improperly handled can make or
Terrorism and Criminal Activities

break a department and its administrators at all levels of government. Descriptive intelligence with predictive interpretation that forecasts the probability of threat and target can enhance operational readiness in training, equipping, and practicing to respond to emergency incidents. If nothing else is done by law enforcement in the intelligence area, threat assessment must be considered, at a minimum. Planners must have appropriate contacts and phone numbers at hand before the event.

State law enforcement agencies should take the lead in pre-incident threat forecasting and planning. Roles and responsibilities of the various stake-holding agencies for the event being planned need to be determined and an incident chain of command put in place, so that, should a terrorist threat materialize, confusion and duplication of response can be diminished.

HIGH PROFILE/CONTROVERSIAL EVENTS

Due to the nature of the event, the crowd composition, or for other reasons, certain events cause more controversy and create greater risks than others do. For example, events involving groups which holds controversial beliefs, present a greater risk for criminal or terrorist behavior. Events involving high level officials are also at a greater risk for terrorist activity because of the significance of the official and the high-profile visibility of the participants and those in attendance. On some occasions, if the date of the event coincides with the anniversary of another terrorist event, the date of the event itself may be considered controversial. Planners must consider every reason why an event may promote controversy or attract special attention.

Conflicts will exist between public safety, recovery, and criminal investigation agencies during terrorist incidents. Rescue and recovery issues and actions must be separated from criminal investigation issues and actions before the event occurs, and non-law enforcement workers should be given training on matters of evidence. Evidence teams should be created to practice and train with local emergency responders to promote mutual understanding of one another’s roles.

FEDERAL ROLES AND RESPONSIBILITIES

One of the best ways to combat terrorism and criminal activities is to identify ahead of time the potential threats and prepare for them. The FBI is the lead agency in addressing terrorism and providing information about terrorist groups in the United States. The FBI may request assistance from federal agencies if needed. The Nunn-Luger-Domenici legislation passed in 1996 funded efforts to assist communities in the preparation against WMD terrorism.
Under Presidential Decision Directive (PDD) 39, the FBI is the lead-agency for crisis management and response to terrorist incidents while FEMA is the lead agency for consequence management. **However, the first response to any of these events will always be the local response.** The FBI can summon extensive federal resources for use at an event, but local responders will be on their own until the FBI arrives.

The FBI has created internal specialized terrorism units with responsibility for:

- Domestic terrorism,
- Weapons of Mass Destruction (WMD),
- Special events,
- WMD countermeasures,
- Computer investigations/operations, and
- Field multi-agency Joint Terrorism Task Forces to work with state and local enforcement.

Develop a relationship with the FBI WMD coordinator to learn about terrorist groups and whether your date or event holds a special significance that may put your event at excess risk.

**B-NICE**

The B-NICE threat of weapons of mass destruction is currently a much-discussed topic in this country. The Federal government is prepared to assist communities in the event of a terrorist attack. The U.S. Government states that it will use all means to deter, defeat, and respond to terrorist attacks. It will make no concessions to terrorists; it will identify terrorists and punish them, and it will work closely with other agencies to carry out U.S. policies and to combat threats.

Since 1990 the U.S. Government has passed the Biological Weapons Anti-terrorism Act (President Bush, 1990), and the Use or Attempted Use of Weapons of Mass Destruction Federal Statute to combat WMD and to provide appropriate penalties for individuals caught possessing or using these weapons. These statutes were tested in this country for the first time following the Oklahoma City bombing.

The Department of Defense has created Weapons of Mass Destruction Civil Support Teams to assist the FBI and communities facing terrorist attack. These teams are made up of National Guard members who assist in the detection and identification of WMD. Since these teams are composed of National Guardsman, governors may also deploy teams to assist communities. The local community’s first responders will still assist, but if the attack is beyond their capability, they may seek assistance from the state or federal government.

Intelligence gathering, threat assessment, containment of potential threats, and effective planning for crisis and consequence management prior to a mass gathering or special
event are of central importance to a jurisdiction having the ability to effectively prevent or counter these threats.

A Weapon of Mass Destruction (WMD) is:

- Any weapon that is designed or intended to cause death or serious bodily injury through the release, dissemination, or impact of toxic or poisonous chemicals, or their precursors;
- Any weapons involving a disease organism; or
- Any weapon that is designed to release radiation or radioactivity at a level dangerous to human life.

Other terms associated with WMDs are:

**Secondary Device**
A secondary device is usually explosive and designed to injure first responders when they arrive at an incident. Following the arrival of the first responders, a second device explodes in the responder area. A secondary device was recently used at an abortion clinic explosion.

**Anti-personnel Devices**
Anti-personnel devices are used to injure people and may or may not be considered secondary devices that target responders.

**Specific Threat**
A specific threat explains what will occur, for example, “A bomb will go off in one hour in the parking garage.”

**Non-specific Threat**
A non-specific threat does not explain what may occur, for example, “Everyone in the building is going to die.”

**Capability**
Capability refers to credible information that a specific group possesses the requisite training, skills, financial means, and access to resources necessary to develop, produce, or acquire a particular type of WMD in a quantity or potency sufficient to produce mass casualties, combined with information substantiating the group’s ability to safely store, test, and deliver the same.
Projected National Threat
Interest in WMD material will continue to increase. Explosives, shootings, and kidnappings will remain the most likely terrorist options. The threat of hoaxes, blackmail, and mass disruption is high.

BIOLOGICAL

Biological terrorism is not a new type of warfare. Biological agents are by far the most dangerous of the three types of weapons of mass destruction. Agents include bacteria, fungi, viruses, or toxins that induce disease or death in any living thing.

The difficulty in countering biological terrorism begins with identifying it. Another serious concern arising from the use of all biological agents is the time that can elapse before their use by terrorists is discovered. Biological attacks can be slow acting, with the symptoms not showing up until as many as 10 days after exposure. The further contamination of additional population by those initially exposed multiplies exponentially as time from the initial exposure increases. The best defense against the spread of the biological element is accurate documentation and tracking of this kind of WMD by medical personnel to contain the exposure.

One case highlights the importance of intelligence sharing between federal, state, and local authorities. The Minnesota Patriots Council in 1990 is known to have created the biological agent Ricin and plotted to use it against a Federal marshal. The plot was thwarted when a county sheriff arrested the wife of one member of the group on unrelated charges, and she revealed the plot and the location of the biological agent. At the time the biological agent was taken as evidence, the group had enough powdered Ricin to kill 125 people relatively easily.

With many countries facing economic difficulties at the end of the Cold War, experts fear that they may be selling their biological weapons to the highest bidder. However, the lack of an effective delivery system to deploy a biological agent currently limits the ability for widespread impact upon the population.

NUCLEAR

Nuclear terrorism refers to the use of nuclear or radiological materials as weapons or to cause damage. This threat creates the largest challenge for law enforcement into the new millennium.

Although the use of a crude nuclear weapon makes the threat of nuclear terrorism possible, FBI intelligence suggests that it would be difficult for a group to construct such a weapon without weapons-grade uranium or plutonium, which are currently strictly regulated in this country. Nuclear terrorism, then, does not pose a credible immediate threat.
Since nuclear weapons are more easily detected, responders know what they are dealing with. As with the other WMD, the best defense is to have a plan and practice it.

INCENDIARY

Incendiary devices have been used by terrorists for many years since it is a flexible tool capable of causing property damage, loss of life, and panic. Incendiary devices continue to spread until fuel is gone or it is extinguished.

Information from the FBI Bomb Data center reports that incendiary devices were used in approximately 20-25 percent of all bombing incidents in the United States and that when used, incendiary devices ignited approximately 75 percent of the time.

They also reported that less than 5 percent of actual or attempted bombings were proceeded by a threat. The lack of prior notification makes casualties more likely than if a notice is given.

Incendiary devices can be classified as:

- Chemical reaction (including burning fuse)
- Electronic ignition
- Mechanical ignition

The type and construction is only limited to the creativity of the builder.

Incendiary devices may be stationary (placed), hand-thrown (Molotov cocktail), or self-propelled such as rockets or rifle grenades.

The components of an incendiary device are the ignition source, combustible filler material, and housing or container.

The device may be made of:

- Roadway flares,
- Gasoline and motor oil,
- Light bulbs,
- Common electrical components and devices,
- Matches and other household chemicals,
- Fireworks,
- Propane and butane cylinders, and
- Plastic pipes, bottles, and cans.
DETECTION

To detect an incendiary device combustible gas meters, flame ionization detectors, trained dogs, photoionization detectors, and calorimetric tubes may be used.

The clues are similar to detection clues for arson. The clues should be a signal for the responder to take appropriate actions to safeguard himself and the public and treat the area as a potential crime scene. The signs include:

- Prior warning (phone calls),
- Multiple fire locations,
- Signs of accelerants,
- Containers from flammable liquids,
- Splatter patterns indicating a thrown device,
- Fusing residue,
- Signs of forced entry to the area, and
- Common appliances out of place for the environment.

EXPLOSIVES

Explosives seem to be the weapon of choice for terrorists. The explosives can deliver an assortment of destruction and provide a vehicle for dispersal of chemical, biological, incendiary, and nuclear agents.

Explosives produce four effects when detonated:

- Blast pressure—There are two different phases of blast pressure. Positive blast pressure (overpressure) move rapidly away from the explosion center (ground zero) due to the expansion caused by the release of energy. After the positive pressure phases, a vacuum is created at the explosion site. This creates a negative pressure that moves toward the original center of the detonation at hurricane speed. It is less sudden, but last approximately three times as long as the positive pressure wave.

- Fragmentation—An explosive device may propel fragments at high speed for long distances. This often accounts for many injuries or casualties.

- Thermal effect—Sometimes referred to as the incendiary effect, heat produced by the detonation of either high or low explosives varies according to the ingredient materials. High explosives generate greater temperatures than low explosives. However, the thermal effects from low explosives have a longer duration than those of high explosives. The thermal effect is visible in the bright flash or fireball temporarily produced by an explosion. Thermal effects vary as to type of explosive, container, addition of fuel/accelerants, shielding, and proximity.
• Ground Shock-Ground, or seismic shock, is possible but usually will only be generated by a large detonation.

Explosives are defined as materials capable of violent decomposition. This decomposition often takes the form of extremely rapid oxidation (burning). Explosions are the result of sudden and violent release of gas during the decomposition of explosive substances. High temperature, strong shock, and a loud noise follow this release. Explosives are classified according to the speed of their decomposition.

**CHEMICAL**

Chemicals may be used as weapons or to deliver an attack. Originally, the military designed chemical weapons to use in wartime. The results of chemicals used as weapons were so devastating in warfare that many countries rejected their future use and created treaties to forbid their future use and manufacture. In 1995 terrorists attacked a Tokyo subway. Twelve persons died, 4500 were injured, and over 700 required extended hospital stays. The ease of access to chemical agents and the amount of damage they cause make chemical warfare very appealing to radical groups. Directions for the creation and use of chemical weapons can be found on the World Wide Web.

Chemical agents include nerve agents, blood agents, choking agents, and blister agents. These chemical weapons have been used in the recent past both within the United States and abroad. These agents do create a credible threat for use by extremist groups in this country, and there is a high probability that chemical agents are likely to be encountered by state and local law enforcement of this country in the future.

Responders must be prepared to manage a terrorist attack involving a chemical agent. To prepare, they should become knowledgeable of the range of chemical agents used by terrorists in the recent past. Knowledge of chemicals and their effects assists in the first stages of treatment. Each community should establish chemical weapons attack response plans and review them regularly.

**EXPLOSIVES**

Since they are readily available, explosives are the most common weapons of mass destruction. When you plan an event, find out who the responder is for possible explosives or suspicious packages. Does your community have a bomb squad? Do you have dogs that are trained to identify explosives? What is the community policy on explosive devices? Plan ahead and know who to call in an emergency.
MITIGATING ACTIONS

Unattended Packages
At every event, people will leave some items unattended. Public safety officials must
decide beforehand how to handle these items. Who will respond? Does the community
have dogs trained to identify explosives? Will the area be evacuated? Decide these issues
ahead of time and have a written plan for all public safety personnel to follow.

Concealment Areas
Concealment areas are areas where persons may hide, or where someone may hide
packages or other weapons. The best way to avoid problems in these areas is to map the
event grounds and identify the areas that could be used as hiding spots. The venue staff
could assist police in this matter.

Security Sweeps
How often is security going to go through the event site? What are they looking for? How
do they handle incidents? Who is going to do the sweep? Venue personnel and security
personnel should work together. These are a few areas to address in advance. Once a
sweep of the area has been done the area must be secured.
Chapter 6
Post-Event
Action
CHAPTER 6: POST-EVENT ACTION

INTRODUCTION

The after action must be done in a timely manner and shared with the rest of the team. The after action report focuses on both the positive and negatives which occurred at the event.

DEMOBILIZATION

Demobilization should be planned just as carefully as the event itself. Demobilization actually begins during the planning stages of an event and continues during the event. Planners must decide upon a logical order in which to release response agencies and other resources, and they must authorize a point of contact to release resources. Impact on the community and its resources must also be considered in the demobilization process. The Incident Commander using the demobilization unit in the Planning Section should direct the demobilization process.

EVENT CRITIQUE MEETING

Following the event, all members of the planning committee and those in charge of resources should meet to critique the event. For persons unable to attend, providing a survey may be an option. The purpose of the Event Critique Meeting is to allow open discussion of what went well and what could have gone better and to lay the groundwork for future events.

Prior to the meeting, planners should establish guidelines for discussion and select a facilitator for the meeting. Guidelines should emphasize that the meeting is intended to be a positive learning experience for all agencies, not a session to assign blame for problems that occurred during the event. The facilitator may come from Emergency Management or the lead agency, or planners may bring in a neutral third party that will maintain order if conflicts arise and agencies begin to find fault with one another. Problems should be discussed in generic terms as much as possible to avoid singling out specific agencies for criticism.

The lessons learned during one event can be used in planning for later events. The agenda items discussed at the meeting, both successes and failures, should take the form of a report to be examined and discussed by officials later. If serious incidents occurred, such as a death or mass arrests, then writing the final report may have to wait until after litigation is completed. The facilitator is typically assigned responsibility for documenting the meeting.

A log of checkout policy and procedures (which is created during the planning stage) ensures that everything is complete and that all agencies are satisfied with the outcome of the event. Finalize one event before planning another.
The Event Critique Meeting is the final gathering of the event planning committee before releasing response agencies or resource personnel. Before the event planners allow response or resource personnel to leave, they should ensure that the responders have sufficient rest as well as means to return to their home bases safely. Often the personnel working the event are busy taking care of others and forget to take care of themselves.

Also at this meeting the promoter and planners should conclude any outstanding matters such as financial obligations or matters concerning supplies and equipment. Planners and promoters should prepare a detailed statement of expenditures and outstanding bills as a part of the After-Action Report.

**AFTER-ACTION REPORT**

The facilitator or Emergency Management may be tasked to prepare the after-action report. This report is a vital document. The After-Action Report is composed following the critique meeting. The main purpose of an After-Action Report is to identify and document what worked, what did not work, and what could be improved. A useful After-Action Report should prevent the same kinds of mistakes and incidents from occurring at the next event. The report can also include any additional data, such as crowd control measures that were especially successful, that may be useful in planning similar future events. Everyone involved in the event should contribute to this important document. After-Action Reports have no established formats. Most communities have a sample report to guide planners. If an incident occurred during the event, the planning committee must prepare a critique sheet to show how personnel responded to the incident should questions of legal liability arise later. After-Action Reports are also excellent ways to document events for historical or legal purposes.

While this manual focuses mainly on planning a special event, an After-Action Report focuses on improving the next event.

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Administrative/Finance Section</strong></td>
<td>The section responsible for all incident costs and financial considerations. Includes the Time Unit, Procurement Unit, Compensation/Claims Unit, and Cost Unit.</td>
</tr>
<tr>
<td><strong>Agency</strong></td>
<td>A division of government with a specific function or a non-governmental organization that offers a particular kind of assistance. In the Incident Command System (ICS), agencies are defined as jurisdictional (having statutory responsibility for incident mitigation) or assisting and/or cooperating (providing resources and/or assistance). (See Assisting Agency, Cooperating Agency, and Multi-agency.)</td>
</tr>
<tr>
<td><strong>Agency Executive or Administrator</strong></td>
<td>Chief Executive Officer of the agency or jurisdiction that has responsibility for managing the incident.</td>
</tr>
<tr>
<td><strong>Agency Dispatch</strong></td>
<td>The agency or jurisdictional facility from which resources are allocated to incidents.</td>
</tr>
<tr>
<td><strong>Agency Representative</strong></td>
<td>An individual assigned to an incident from an assisting or cooperating agency and who has been delegated full authority to make decisions on all matters affecting that agency’s participation at the incident. Agency Representatives report to the Incident Liaison Officer.</td>
</tr>
<tr>
<td><strong>Air Operations Branch Director</strong></td>
<td>The person primarily responsible for preparing and implementing the air operations portion of the Incident Action Plan (IAP). Also responsible for providing logistical support to helicopters operating at the incident.</td>
</tr>
<tr>
<td><strong>Allocated Resources</strong></td>
<td>Resources dispatched to an incident.</td>
</tr>
<tr>
<td><strong>Area Command</strong></td>
<td>An organization established to 1) oversee the management of multiple incidents that are each being handled by an Incident Command System (ICS) organization; or 2) oversee the management of a very large incident that has multiple Incident Management Teams assigned to it. Area Command has the responsibility to set overall strategy and priorities, allocate assigned resources based on priorities, ensure that incidents are properly managed, and ensure that objectives are met and strategies followed.</td>
</tr>
<tr>
<td><strong>Assigned Resources</strong></td>
<td>Resources checked in and assigned work tasks on an incident.</td>
</tr>
<tr>
<td><strong>Assignments</strong></td>
<td>Tasks given to resources to perform within a given operational period, based upon tactical objectives in the Incident Action Plan (IAP).</td>
</tr>
<tr>
<td><strong>Assistant</strong></td>
<td>Title for subordinates of the Command Staff positions. The title indicates a level of technical capability, qualifications, and responsibility subordinate to the primary positions. Assistants may also be used at other positions in the ICS organization.</td>
</tr>
<tr>
<td><strong>Assisting Agency</strong></td>
<td>An agency directly contributing tactical or service resources to another agency.</td>
</tr>
<tr>
<td><strong>Available Resources</strong></td>
<td>Incident-based resources that are available for assignment within 3 minutes.</td>
</tr>
<tr>
<td><strong>Base</strong></td>
<td>The location at which primary logistics functions for an incident are coordinated and administered. There is only one base per incident. (An incident name or other designator will be added to the term base.) The Incident Command Post may be collocated with the base.</td>

</table>
Glossary

Branch  The organizational level having functional or geographic responsibility for major parts of incident operations. The branch level is organizationally between section and division/group. Branches are identified by the use of Roman numerals.

Cache  A predetermined complement of tools, equipment, or supplies stored in a designated location and available for incident use.

Camp  A geographical site within the general incident area but separate from the Incident Base, and equipped and staffed to provide sleeping, food, water, and sanitary services to incident personnel.

Check-in  The process whereby resources first report to an incident. Check-in locations are as follows: Incident Command Post (Resources Unit), Incident Base, Camps, Staging Areas, Helibases, Helispots, and Division Supervisors (for direct line assignments).

Chain of Command  A series of management positions in order of authority; see Unity of Command.

Chief  The ICS title for individuals responsible for command of functional sections: Operations, Planning, Logistics, and Administration/Finance.

Clear Text  The use of plain English in radio communications transmissions. No Ten Codes or agency-specific codes are allowed when using Clear Text.

COBRA  Chemical, Ordinance, Biological, Radiological; Domestic Preparedness reference.
<p>| <strong>Glossary</strong> |
|-----------------|--------------------------------------------------------------------------------------------------|
| <strong>Command</strong> | The act of directing or controlling resources by virtue of explicit legal, agency, or delegated authority. May also refer to the Incident Commander. |
| <strong>Command Staff</strong> | Consists of the Information Officer, Safety Officer, and Liaison Officer. They report directly to the Incident Commander. They may have an assistant or assistants, as needed. |
| <strong>Communications Unit (Comm. Unit)</strong> | An organizational unit in the Logistics Section responsible for providing communication services at an incident. A Communications Unit may also be a facility (for example, a trailer or mobile van) used to provide the major part of an Incident Communications Center. |
| <strong>Compensation Unit/Claims Unit</strong> | Functional unit within the Administration/Finance Section responsible for financial concerns resulting from injuries or fatalities at the incident. |
| <strong>Complex</strong> | Two or more individual incidents that are located in the same general area and are assigned to a single Incident Commander or Unified Command. |
| <strong>Consequence Management</strong> | The Federal Emergency Management Agency (FEMA) is the lead agency for consequence management. |
| <strong>Contingency Plan</strong> | A documented scheme of assigned responsibilities, actions, and procedures to be followed should an emergency situation develop. |
| <strong>Cooperating Agency</strong> | An agency supplying assistance other than direct tactical or support functions or resources to the incident control effort (for example, the Red Cross or telephone company). |
| <strong>Coordination Center</strong> | Term used to describe any facility that is used for the coordination of agency or jurisdictional resources in support of one or more incidents. |</p>

Glossary

Deputy
A fully qualified individual who, in the absence of a superior, could be delegated the authority to manage a functional operation or perform a specific task. In some cases, a Deputy could act as relief for a superior and therefore must be fully qualified in the position. Deputies can be assigned to the Incident Commander, General Staff heads, and Branch Directors.

Demobilization Unit
Functional unit within the Planning Section responsible for ensuring orderly, safe, and efficient demobilization of incident resources.

Director
The ICS title for individuals responsible for command of a branch.

Dispatch
The implementation of a command decision to move a resource or resources from one place to another.

Dispatch Center
A facility from which resources are directly assigned to an incident.

Division
Divisions are used to divide an incident into geographical areas of operation. A division is located within the ICS organization between the Task Force/Strike Team and the branch. (See also Group.) Divisions are identified by alphabetic characters for horizontal applications and, often, by floor numbers when used in buildings.

Documentation Unit
Functional unit within the Planning Section responsible for collecting, recording, and safeguarding all documents relevant to the incident.

Emergency Medical Technician (EMT)
A healthcare professional with special skills and knowledge in pre-hospital emergency medicine.
| **Emergency Operating Center (EOC)** | A designated facility established by an agency or jurisdiction to coordinate the overall agency or jurisdictional response and support to an emergency. |
| **Emergency Management** | A range of measures to manage risks to communities and the environment. |
| **Emergency Management Coordinator** | Refers to the individual within each political subdivision who has coordination responsibility for jurisdictional emergency management. |
| **Emergency Management Plan** | A formal record of agreed emergency management roles, responsibilities, strategies, systems, and arrangements. |
| **Emergency Operations Plan (EOP)** | The plan that each jurisdiction has and maintains for responding appropriately to hazards. |
| **Endemic** | Constant presence of a disease or infectious agent within a given geographic area or population group. |
| **Environmental Health Officer** | Terminology used which includes Health Inspectors/Surveyors, Public Health Officers, Sanitary Inspectors/Engineers, Hygiene Officers, and Preventative Health Officers. |
| **Event** | In this curriculum, an event is a planned, non-emergency activity. ICS should be used as the management system for a wide range of events (for example, parades, concerts, or sporting events). |
| **Event Footprint** | The area impacted by the event. This includes the event site(s) and any surrounding area impacted. |
| **Facilities Unit** | Functional unit within the Support Branch of the Logistics Section that provides fixed facilities for the incident. These |
facilities may include the Incident Base, feeding areas, sleeping areas, or sanitary facilities.

**Field Operations Guide**
A pocketsize instruction manual on the application of the Incident Command System.

**Food Unit**
Functional unit within the Service Branch of the Logistics Section responsible for providing meals for incident personnel.

**Freelance**
Term used to describe resources performing assignments on their own and not under direct ICS supervision.

**Function**
Term often used in reference to the five major activities in the ICS (that is, Command, Operations, Planning, Logistics, and Administration/Finance). The term *function* is used when describing the activity involved (for example, the planning function).

**G**

**Gastric Illness**
An inflammation of the stomach and the intestinal tract, often described as food poisoning.

**General Staff**
The group of incident management personnel reporting to the Incident Commander. They may each have a deputy, as needed. The General Staff consists of an Operations Section Chief, Planning Section Chief, Logistics Section Chief, and Administration/Finance Section Chief.

**Goal**
The end toward which incident efforts are directed.

**Ground Support Unit**
Functional unit within the Support Branch of the Logistics Section responsible for the fueling, maintaining, and repairing of vehicles, and for the transportation of personnel and supplies.
Group
Groups are established to divide the incident into functional areas of operation. Groups are composed of resources assembled to perform a special function not necessarily within a single geographic division. (See Group, under Division, above.)

Hazard Analysis
Identifies potential hazards, estimates how serious they are, and establishes planning priorities. Provides a factual basis for planning and the necessary documentation for planning and response efforts.

Helibase
The main location for parking, fueling, maintenance, and loading of helicopters operating in support of an incident. It is usually located at or near the Incident Base.

Helibase Crew
A crew of individuals who may be assigned to support helicopter operations.

Helispot
Any designated location where a helicopter can safely take off and land. Some helispots may be used for loading of supplies, equipment, or personnel.

Incident
An occurrence caused either by humans or by natural phenomena that requires action by emergency service personnel to prevent or minimize loss of life or damage to property and/or natural resources.

Incident Action Plan (IAP)
Contains objectives reflecting the overall incident strategy and specific tactical actions and supporting information for the next operational period. The plan may be oral or written. When written, the plan may have a number of forms as attachments (for example, traffic plan, safety plan, communications plan, or map).
Incident Base

Location at the incident where the primary logistics functions are coordinated and administered. (An Incident name or other designator will be added to the term base.) The Incident Command Post may be collocated with the base. There is only one base per incident.

Incident Commander (IC)

The individual responsible for the management of all incident operations at the incident site.

Incident Command Post (ICP)

The location at which the primary command functions is executed. The ICP may be collocated with the incident base or other incident facilities.

Incident Command System (ICS)

The combination of facilities, equipment, personnel, procedures, and communications operating with a common organizational structure, with responsibility for the management of assigned resources to effectively accomplish stated objectives pertaining to an incident.

Incident Communication Center

The location of the Communications Unit and the Message Center.

Incident Management Team

The Incident Commander and appropriate General and Command Staff personnel assigned to an incident.

Incident Objectives

Incident objectives provide the needed guidance and direction necessary for the selection of appropriate strategy(s) and for the tactical direction of resources. Incident objectives are based on realistic expectations of what can be accomplished when all allocated resources have been effectively deployed. Incident objectives must be achievable and measurable, yet broad enough to allow for strategic and tactical alternatives.

Information Officer

A member of the Command Staff responsible for communicating with the media or other appropriate agencies requiring information directly from the incident. There is only one Information Officer per incident.

<tr>
<td><strong>Initial Action</strong></td>
<td>Resources initially committed to an incident.</td>
</tr>
<tr>
<td><strong>J</strong></td>
<td></td>
</tr>
<tr>
<td><strong>Jurisdiction</strong></td>
<td>Refers to the range or sphere of authority. Public agencies have jurisdiction at an incident related to their legal responsibilities and authority for incident mitigation. Jurisdictional authority at an incident can be political/geographical (for example, city, county, state, or Federal boundary lines) or functional (for example, police department or health department). (See Multi-jurisdiction, above.)</td>
</tr>
<tr>
<td><strong>Jurisdictional Agency</strong></td>
<td>The agency having jurisdiction and responsibility for a specific geographical area or for a mandated function.</td>
</tr>
<tr>
<td><strong>L</strong></td>
<td></td>
</tr>
<tr>
<td><strong>Leader</strong></td>
<td>The ICS title for individuals responsible for a Task Force, Strike Team, or functional unit.</td>
</tr>
<tr>
<td><strong>Liaison Officer</strong></td>
<td>A member of the Command Staff responsible for interacting with representatives from cooperating and assisting agencies.</td>
</tr>
<tr>
<td><strong>Logistics Section</strong></td>
<td>The section responsible for providing facilities, services, and materials for the incident.</td>
</tr>
<tr>
<td><strong>Life-Safety</strong></td>
<td>Highest incident priority refers to the joint consideration of both the life and physical well-being of individuals.</td>
</tr>
<tr>
<td><strong>M</strong></td>
<td></td>
</tr>
<tr>
<td><strong>Managers</strong></td>
<td>Individuals within ICS organizational units who are assigned specific responsibilities (for example, Staging Area Manager or Camp Manager).</td>
</tr>
<tr>
<td><strong>Glossary</strong></td>
<td></td>
</tr>
<tr>
<td>----------------</td>
<td></td>
</tr>
<tr>
<td><strong>Management by Objectives</strong></td>
<td>In ICS, this is a top-down management activity that involves a three-step process to achieve the incident goal. The steps include establishing the incident objectives, selecting appropriate strategy(s) to achieve the objectives, and taking the tactical direction associated with the selected strategy. Tactical direction includes selecting tactics, selecting resources, assigning resources, and monitoring performance.</td>
</tr>
<tr>
<td><strong>Mass Gathering Medicine</strong></td>
<td>The management of the health and medical requirements of mass gatherings.</td>
</tr>
<tr>
<td><strong>Medical Unit</strong></td>
<td>The functional unit within the Service Branch of the Logistics Section responsible for the development of the Medical Emergency Plan and for providing emergency medical treatment of incident personnel.</td>
</tr>
<tr>
<td><strong>Message Center</strong></td>
<td>Part of the Incident Communications Center and collocated with or placed adjacent to it. It receives, records, and routes information about resources reporting to the incident, resource status, and administration and tactical traffic.</td>
</tr>
<tr>
<td><strong>Metering</strong></td>
<td>Term applied to the control procedures used to prevent critical crowd densities from developing in specific areas.</td>
</tr>
<tr>
<td><strong>Mobilization</strong></td>
<td>The process and procedures used by all organizations—Federal, state, and local—for activating, assembling, and transporting all resources that have been requested to respond to or support an incident.</td>
</tr>
<tr>
<td><strong>Mobilization Center</strong></td>
<td>An off-incident location at which emergency service personnel and equipment are temporarily located pending assignment, release, or reassignment.</td>
</tr>
<tr>
<td><strong>Moshing</strong></td>
<td>A practice carried out at concerts in which a person is supported by the upheld arms of a crowd of people. This practice is carried out in the moshpit area where the crowd is the densest.</td>
</tr>
<tr>
<td><strong>Glossary</strong></td>
<td></td>
</tr>
<tr>
<td>----------------</td>
<td></td>
</tr>
<tr>
<td><strong>Multi-agency Incident</strong></td>
<td>An incident in which one or more agencies assist a jurisdictional agency or agencies. May be single or unified command.</td>
</tr>
<tr>
<td><strong>Multi-agency Coordination (MAC)</strong></td>
<td>A generalized term that describes the functions and activities of representatives of involved agencies or jurisdictions who come together to make decisions regarding the prioritizing of incidents and the sharing and use of critical resources. The MAC organization is <em>not</em> a part of the ICS and is <em>not</em> involved in developing incident strategy or tactics.</td>
</tr>
<tr>
<td><strong>Multi-agency Coordination System (MACS)</strong></td>
<td>The combination of personnel, facilities, equipment, procedures, and communications integrated into a common system. When activated, MACS enables the coordination of assisting agency resources and support in a multi-agency or multi-jurisdictional environment. A MAC Group functions within the MACS.</td>
</tr>
<tr>
<td><strong>Multi-jurisdiction Incident</strong></td>
<td>An incident requiring action from multiple agencies that have a statutory responsibility for incident mitigation. In ICS, these incidents should be managed under Unified Command.</td>
</tr>
<tr>
<td><strong>Mutual Agreement</strong></td>
<td>Written agreement between agencies or jurisdictions in which they agree to assist one another upon request, by furnishing personnel and equipment in an emergency situation.</td>
</tr>
<tr>
<td><strong>N</strong></td>
<td>Nuclear, Biological or Chemical Weapon.</td>
</tr>
<tr>
<td><strong>Operational Period</strong></td>
<td>The period of time scheduled for execution of a given set of operation actions as specified in the Incident Action Plan. Operational Periods can be of various lengths, although usually not over 24 hours.</td>
</tr>
<tr>
<td>Term</td>
<td>Definition</td>
</tr>
<tr>
<td>-------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Operations Section</td>
<td>The section responsible for all tactical operations at the incident. Includes branches, divisions or groups, Task Forces, Strike Teams, and Single Resources.</td>
</tr>
<tr>
<td>Out-of-Service Resources</td>
<td>Resources assigned to an incident but unable to respond for mechanical, rest, or personnel reasons.</td>
</tr>
<tr>
<td>Planning Meeting</td>
<td>A meeting held as needed throughout the duration of an incident to select specific strategies and tactics for incident control operations and for service and support planning. On larger incidents, the planning meeting is a major element in the development of the Incident Action Plan.</td>
</tr>
<tr>
<td>Potable Water</td>
<td>Water which is safe for human consumption.</td>
</tr>
<tr>
<td>Procurement Unit</td>
<td>Functional unit within the Administration/Finance Section responsible for financial matters involving vendor contracts.</td>
</tr>
<tr>
<td>Putrescible</td>
<td>Waste which will decompose, such as food waste.</td>
</tr>
<tr>
<td>Radio Cache</td>
<td>A radio cache may consist of a number of portable radios, a base station and, in some cases, a repeater, all stored in a predetermined location for dispatch to incidents.</td>
</tr>
<tr>
<td>Recorders</td>
<td>Individuals within ICS organizational units who are responsible for recording information. Recorders work in Planning, Logistics, and Administration/Finance Units.</td>
</tr>
<tr>
<td>Reinforced Response</td>
<td>Those resources requested in addition to the initial response.</td>
</tr>
<tr>
<td>Glossary</td>
<td></td>
</tr>
<tr>
<td>-------------------------------</td>
<td>-----------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td><strong>Reporting Locations</strong></td>
<td>Location or facilities where incoming resources can check in at the incident. Refers to staging.</td>
</tr>
<tr>
<td><strong>Resource Status Unit</strong></td>
<td>Functional unit within the Planning Section responsible for recording the status of resources committed to the incident and for evaluating resources currently committed to the incident, the impact that additional responding resources will have on the incident, and anticipated resource needs.</td>
</tr>
<tr>
<td><strong>Resource Gap Analysis</strong></td>
<td>In pre-event planning the analysis of what public safety resources the event will require versus what is locally available.</td>
</tr>
<tr>
<td><strong>Resources</strong></td>
<td>All personnel and major items of equipment available, or potentially available, for assignment to incidents. Resources are described by kind and type (for example, ground, water, and air).</td>
</tr>
<tr>
<td><strong>Reticulated</strong></td>
<td>Distribution or collection network for drinking water or sewage.</td>
</tr>
<tr>
<td><strong>Risk Analysis</strong></td>
<td>Assesses the probability of injury or damage due to a hazard and estimates the actual damage that may occur.</td>
</tr>
<tr>
<td><strong>Risk Assessment</strong></td>
<td>The process used to determine risk management priorities by evaluating and comparing the level of risk against pre-determined standards, target risk levels, or other criteria.</td>
</tr>
<tr>
<td><strong>Safety Officer</strong></td>
<td>A member of the Command Staff responsible for monitoring and assessing safety hazards or unsafe situations and for developing measures for ensuring personnel safety.</td>
</tr>
<tr>
<td><strong>Sanitation</strong></td>
<td>Measures taken for the promotion of public health.</td>
</tr>
</tbody>
</table>
## Glossary

**Section**
That organizational level with responsibility for a major functional area of the incident (for example, Operations, Planning, Logistics, Administration/Finance). The section is organizationally located between branch and Incident Commander.

**Sector**
Term used in some applications to describe an organizational level similar to an ICS division or group. Sector is not a part of ICS terminology.

**Segment**
A geographical area in which a Task Force/Strike Team Leader or supervisor of a single resource is assigned authority and responsibility for the coordination of resources and implementation of planned tactics. A segment may be a portion of a division or an area inside or outside the perimeter of an incident. Segments are identified with Arabic numbers.

**Service Branch**
A branch within the Logistics Section responsible for service activities at the incident. Includes the Communications, Medical, and Food Units.

**Sewage**
Waste matter that passes through sewers.

**Single Resource**
A piece of equipment and personnel complement, or a crew of individuals with an identified work supervisor, that can be used in a tactical application on an incident.

**Situation Status Unit**
The functional unit within the Planning Section responsible for the collection and organization of incident status information and for analysis of the situation as it progresses. Reports to the Planning Section Chief.

**Slam Dancing**
A spontaneous form of dancing where people deliberately throw themselves against people they are dancing with.

**Span of Control**
The supervisory ratio of from three to seven individuals, with five-to-one being established as optimal for control.

</tbody>
</table>
**Task Force**

Any combination of single resources within the span of control that is assembled for a particular tactical need and have common communications and a leader.

**Technical Specialists**

Personnel with special skills who are activated only when needed. Technical Specialists can be used anywhere within the ICS organization.

**Temporary Flight Restrictions (TFRs)**

Federal Aviation Regulation 91.137 provides for the establishment of temporary airspace restrictions for non-emergency aircraft. TFRs can be requested for incidents and/or events generating a high degree of public interest, and are normally limited to a 5-nautical-mile radius and 2,000 feet above the surface.

**Time Unit**

Functional unit within the Administration/Finance Section responsible for recording time for incident personnel.

**Topography**

Physical features of place or locality.

**Type**

The type of any kind of resource refers to its capability compared to another type. Type 1 provides a greater overall capability due to power, size, or capacity than a Type 2 resource. Assigning type provides resource managers with additional information in selecting the best resource for the task.

**Unified Command**

In ICS, Unified Command is a unified team effort that allows all agencies with responsibility for the incident, either geographical or functional, to manage an incident by establishing a common set of incident objectives and strategies. This is accomplished without losing or abdicating agency authority, responsibility, or accountability. An Operations Section Chief is responsible for implementing the Incident Action Plan.

TAB 01: NOTES ON HUMAN BEHAVIOR

1. People are action or goal-orientated. Their reason for being there guides behavior.

2. Behavior takes place within existing roles. These roles may be part of the crowd or that of ticket collector or security guard.

3. Role-related rules guide behavior. The rules guide behavior of the person in the role and also how people will react to them.

4. People actively interpret their surroundings. Behavior is based on this interpretation.

5. Behavior is “setting defined.” The nature and purpose of the place influence what goes on and what is deemed appropriate behavior.

6. Behavior is guided by expectations and understanding. People use understanding of the usual behavior for the place and expectations about people in particular roles to interpret what is going on about them and to guide their actions. For example, running in an underground railway does not signify a fire.

7. Behavior is guided by its organized context. Simply, this relates to how the system functions normally. If it is unable to cope normally, then it will not cope during a disaster.

8. Behavior is guided by its historical context. Over time, people establish a view of the place and relationships with people there. These relationships and experiences play a role in shaping action and interaction.

9. Stages of behavior. (See Tab 03.)

TAB 02: STAGES OF BEHAVIOR

For ease of understanding, we divide individual behavior into four stages. With each input, we include an analysis of the information leading to the response. This process is a feedback loop that is in action continuously.

**STAGES**

1. **SENSE**
2. **INTERPRET**
3. **DECIDE**
4. **ACT**

**INDIVIDUAL BEHAVIOR**

**CROWD DECISIONS**

**COLLECTIVE BEHAVIOR**

**FACTORS**

- Environmental inputs
- Ambiguous or specific input
- Source of input
- Content analysis
- Source analysis (validity)
- Knowledge, experience and expectation analysis
- Knowledge and experience considerations
- Goal and objective considerations
- Alternative considerations
- Consequence considerations
- Mental/emotional considerations
- Personal response
- Venue physical characteristics response
- Temporal changes to characteristics response

Crowd responses are thus sequences of individual and collective behavior, where individuals communicate with one another to affiliate (for example, family or friendships), reduce confusion, and evaluate emotional responses.
1. **Crowds are complex social structures.**

   Social ROLE is the behavior set we carry out in a given context. Social NORM is the guideline set we use to deal with others in their role.

   Crowd Roles:
   - Active Core: carry out action of crowd.
   - Cheerleaders: verbal support for leaders.
   - Observers: follow actions but rarely take part.

   Gatherings are organized into roles that have differing behaviors and are spatially distributed.

   Phases in Culture Development -- Vocalization -- Verbalization -- Gesticulation.

   Significance of crowds:
   - Increase probability of a dangerous occurrence.
   - Increase potential number of victims.
   - Make communication slower and more difficult.
   - Make changes in action slower and more difficult.
   - Diffusion of responsibility (someone else will do it).

2. **Panic and Crazes**

   **Panic** in a group is the flight from a real or perceived threat in which escape appears to be the only effective response. What appears to be panic is usually the result of poor inputs (especially communications or the lack of) and previous knowledge and experience.

   **Craze** in a group is the temporary, short-lived competitive rush by a group toward some attractive object. Tends to occur on entering, exacerbated by the lack of information.

3. **Deindividuation**

   Deindividuation is defined as a loss of self-awareness and evaluation apprehension in group situations that foster anonymity. While obviously related to individual behavior, you must consider it closely with Crowd Composition (see Tab 06). Behavior may be:
   - Mild lessening of restraint, for example, screaming during a concert;
   - Impulsive self-gratification, for example, theft, vandalism, molestation; and
   - Destructive social explosions, for example, group violence, rioting and torturing.
4. Defusing

The tedium created by waiting and/or the perception that other gates are being opened first or later arrivals are being admitted first can create problems. Such things as appropriate music, use of humor, food and beverage services moving through the group, cheerful security staff moving through the group, and good communication including a public address system, can help defuse the situation.
## TAB 04: CROWD TYPES

<table>
<thead>
<tr>
<th>CROWD TYPE</th>
<th>COMMENT</th>
</tr>
</thead>
<tbody>
<tr>
<td>AMBULATORY</td>
<td>Walking, usually calm</td>
</tr>
<tr>
<td>DISABILITY/LIMITED MOVEMENT</td>
<td>Crowd has limited or restricted movement; requires additional planning</td>
</tr>
<tr>
<td>COHESIVE/SPECTATOR</td>
<td>Watching specific activity</td>
</tr>
<tr>
<td>EXPRESSIVE/REVELOUS</td>
<td>Emotional release, for example, cheering movement in unison</td>
</tr>
<tr>
<td>PARTICIPATORY</td>
<td>Involved in actual event, for example, community fun runs</td>
</tr>
<tr>
<td>AGGRESSIVE/HOSTILE</td>
<td>Initially verbal, open to lawlessness</td>
</tr>
<tr>
<td>DEMONSTRATOR</td>
<td>Organized to some degree, for example, pickets, marches</td>
</tr>
<tr>
<td>ESCAPE/TRAMPLING</td>
<td>Danger may be real or imaginary</td>
</tr>
<tr>
<td>DENSE/SUFFOCATING</td>
<td>Reduction of individual physical movement</td>
</tr>
<tr>
<td>RUSHING/LOOTING</td>
<td>Attempt to acquire/obtain/steal something, for example, tickets</td>
</tr>
<tr>
<td>VIOLENT</td>
<td>Attacking/terrorizing</td>
</tr>
</tbody>
</table>

One crowd may exhibit all or part of the above types; therefore, you must consider each category, or at the least the most likely categories, in your plan.
## TAB 05: CROWD COMPOSITION

<table>
<thead>
<tr>
<th>ASSESSMENT</th>
<th>COMMENT</th>
</tr>
</thead>
<tbody>
<tr>
<td>HOW ORGANIZED</td>
<td>For example, walking to venue versus demonstrators</td>
</tr>
<tr>
<td>LEADERSHIP</td>
<td>Normal crowd has no leadership; they are spontaneous.</td>
</tr>
<tr>
<td>COHESIVENESS</td>
<td>Degree of bonding</td>
</tr>
<tr>
<td>UNITY OF PURPOSE</td>
<td>Some may be focused; others have own agenda, for example, moshing or slam dancing.</td>
</tr>
<tr>
<td>COMMON MOTIVE FOR ACTION</td>
<td>Note distinction between performing same action (for example, cheering) versus motive for same action (for example, leaving the venue).</td>
</tr>
<tr>
<td>PSYCHOLOGICAL UNITY</td>
<td>Crowds at benefits are psychologically united for good; however, demonstrators could pose problems if antagonized.</td>
</tr>
<tr>
<td>EMOTIONAL INTENSITY</td>
<td>Much of this depends on the event and or special effects taking place.</td>
</tr>
<tr>
<td>VOLATILITY</td>
<td>To what degree has crowd reached an explosive point?</td>
</tr>
<tr>
<td>INDIVIDUAL BEHAVIOR</td>
<td>How much individual control and responsibility is being exercised? The more this is evident, the more restrained the crowd.</td>
</tr>
<tr>
<td>GROUP BEHAVIOR</td>
<td>To what degree are individuals dominated by the group? The more this is evident the closer to “mob mentality.”</td>
</tr>
<tr>
<td>DEGREE OF LAWLESSNESS</td>
<td>How much criminal behavior is taking place?</td>
</tr>
<tr>
<td>LEVEL OF VIOLENCE</td>
<td>Can be assessed historically and/or by current observations</td>
</tr>
<tr>
<td>LEVEL OF PROPERTY DAMAGE</td>
<td>How much is likely to occur and where, for example, parking area, toilets, walkways, etc.? Assessment is historical for venue, event, and crowd, plus current assessment.</td>
</tr>
<tr>
<td>LIKELIHOOD OF INJURY OR DEATH</td>
<td>Certain places at certain times, for example, major sporting event and certain events, for example, motor races</td>
</tr>
<tr>
<td>NEED FOR CROWD CONTROL</td>
<td>How important is a detailed plan? Must be discussed with experts and experienced persons because the more detailed and complex the plan, the more expensive and resource-intense the commitment.</td>
</tr>
</tbody>
</table>

When you understand what you are dealing with, then brief ALL personnel on what to look for and how they should respond while they are performing their duties.
## TAB 06: CROWD CATALYSTS

<table>
<thead>
<tr>
<th>CATALYST</th>
<th>EXAMPLE</th>
</tr>
</thead>
<tbody>
<tr>
<td>OPERATIONAL</td>
<td>Parking, no show performers, cancellations</td>
</tr>

<td>EVENT ACTIVITIES</td>
<td>Smoke, fire, lasers, noise</td>
</tr>
<tr>
<td>PERFORMER(S) ACTIONS</td>
<td>Sexual/violent gestures, challenges/song lyrics</td>
</tr>
<tr>
<td>SPECTATOR FACTORS</td>
<td>Drugs, alcohol, rush for seats</td>
</tr>
<tr>
<td>SECURITY FACTORS</td>
<td>Excessive or unreasonable force, abuse of authority</td>
</tr>
<tr>
<td>SOCIAL FACTORS</td>
<td>Racial tensions, team rivalries</td>
</tr>
<tr>
<td>WEATHER</td>
<td>Heat, humidity, rain, lack of ventilation</td>
</tr>
<tr>
<td>NATURAL DISASTER</td>
<td>Earthquake, deluge of rain, flash flood</td>
</tr>
<tr>
<td>MAN MADE DISASTER</td>
<td>Structural failure, toxic substance</td>
</tr>
</tbody>
</table>

The objective should be to prevent the build-up of large accumulations of patrons, particularly within short time periods, in confined spaces especially if they are frustrated by the inability to see what is happening.

A study by Fruin (1981) identifies critical crowd densities as a common characteristic of crowd disasters. Critical crowd densities are approached when the floor space per standing person is reduced to about 5.38 sq. ft.

Considering the various movements or positions spectators will occupy, approximate minimal mobility requirements have been empirically identified by Fruin (1981) as follows:

- Pedestrians moving in a stream require average areas of 24.73 sq. feet per person to attain normal walking speed, and to pass and avoid others.
- At 10 sq. feet per person, walking becomes significantly restricted, and speeds noticeably reduced.
- At 4.95 sq. feet per person, the maximum capacity of a corridor or walkway is attained with movement at a shuffling gait and movement possible only as a group. This would be characteristic of a group exiting a stadium or theater.
- At less than 4.95 sq. feet per person average, individual pedestrian mobility becomes increasingly restricted.
- At approximately 3 sq. feet per person, involuntary contact and brushing against others occurs. This is a behavioral threshold generally avoided by the public, except in crowded elevators and buses.
- Below 2 sq. feet per person, potentially dangerous crowd forces and psychological pressures begin to develop.

Fruin (1981) contended that "the combined pressure of massed pedestrians and shock-wave effects that run through crowds at critical density levels produce forces which are impossible for individuals, even small groups of individuals, to resist."

The above information shows that you may need to provide a monitoring system, such as closed circuit television monitoring of crowd movements, that will provide warning to the services that they must take necessary action to prevent a major incident.
In his writings on crowd disasters, Fruin (1981) identifies several areas regarding spectator throughput in entry to a performance. For planning purposes, he suggests:

1. **Ticket Collectors**
   Ticket collectors must be in a staff uniform or otherwise identifiable. Ticket collectors faced with a constant line can throughput a maximum of:
   - One patron per second per portal in a simple pass-through situation.
   - Two seconds per patron if the ticket must be torn and stub handed to patron; and
   - More complicated ticketing procedures (and/or answering the occasional question) will protract time per patron.

2. **Doorways**
   Free-swinging door, open portal, or gate can accommodate up to one person per second with a constant queue.
   
   Revolving doors and turnstiles would be half this rate of throughput, or less.

3. **Corridors, Walkways, Ramps**
   Have a maximum pedestrian traffic capacity of approximately 25 persons per minute per 1 foot of clear width, in dense crowds.

4. **Stairs**
   Have a maximum practical traffic capacity of approximately 16 persons per minute in the upward direction. Narrow stairs (less than 5 feet) will lower the maximum flow.

5. **Escalators and Moving Walkways**
   A standard 3.94-ft. wide escalator or moving walkway, operating at 118 feet per minute can carry 100 persons per minute under a constant queue.
Team Approach
Special Event Contingency Planning development should be the joint effort of a planning team – a group of people who represent a cross-section of the organizations that are involved in the emergency response effort. Although each jurisdiction’s team will vary somewhat, the Emergency Manager usually serves as the team’s planning coordinator. Team members may include representatives of the groups listed below:

- Office of the Chief Executive.
- Promoter/Sponsor.
- Emergency services agencies (law enforcement, fire/rescue, emergency medical services, and public health and safety, and others).
- Public works/Utilities.
- Planning agencies and individuals (for example, community development, city planning commissions, and hazard mitigation planner).
- Local Emergency Planning Committees, for hazardous materials information.
- Public works agencies and utility companies.
- Social service agencies and volunteer organizations (including the American Red Cross and Salvation Army).
- Medical community representatives (for example, area hospitals, EMS agencies, medical examiner, coroner, mortician).
- Key education personnel (including administrators).
- Communications representatives (Public Information Officer, local media, radio/CB groups, and others).
- Aviation and coastal authorities (including State aviation authority, other air support representatives, port authorities, U.S. Coast Guard station).
- Chief Financial Officer, auditor, and heads of any centralized procurement and resource support agencies.
- The jurisdiction’s legal counsel.
- Industrial and military installations in the area.
- Labor and professional organizations.
- Animal care and control organizations.
- Emergency Managers and agency representatives from neighboring jurisdictions, to coordinate mutual aid needs.
- State and/or Federal representatives, as appropriate.
- Private sector.

A team approach to planning offers many advantages, including:

**A Sense of Ownership** – The plan is more likely to be used and followed if the tasked organizations have a sense that the plan is “theirs.”
Job Aids

**Greater Resources** – More knowledge and expertise are brought to bear on the planning effort when more people are involved.

**Cooperative Relationships** – Closer professional relationships that are developed during the planning process should translate into better cooperation and coordination in emergencies.

Traffic Patterns

- Public Works signing
- Event will require traffic flow or street closures (if checked, attach complete list)
- Temporary traffic code or parking restrictions (if checked, attach list)
- Traffic direction and control restrictions (if checked, attach list)
- Tow truck service (if checked, attach agreements)
- Abandoned and/or illegally parked vehicle recovery (if checked, attach agreements)

Public Safety Plan

Attach ICS Forms 201, 202, 203 and 205

Risk / hazard analysis

- Criminal response
- Fire response
  - Structure
  - At site
  - Vehicle

- Hazardous materials
- Electrical hazards
- Medical emergencies
  - Food-related illnesses
  - First Aid
  - Heat / cold exposures
  - Trauma
  - Overdoses

- Structure collapse
- Crowd rush
- Mass casualty
- Mass fatality
- Lost or missing persons / children
- Unattended packages
- Crowd disbursement
- Offender identification
- Public notification process (ICS Form 205 required)
- Access control
- Evacuation routes
- Evacuee assembly areas
- Shelters
Event Logistics

- Support
- Facilities
- Food Unit
- Communications
- Ground Support
- Air Support
- Medical Unit

Demobilization Plan

- Traffic or pedestrian egress from site
- Secondary transportation plan
- Sanitation removal
- Venue clean-up
- Traffic pattern normalization
- Contractual evaluation

  - Organizer commitments
  - Other public or private contracts

- Debriefing

PROMOTER’S CHECKLIST

Neighbors: ________________________________  ________________________________

Other: ____________________________________  ________________________________

Other: ____________________________________  ________________________________

Time frame necessary for contact with stakeholders:
___________________________________________________________________________
___________________________________________________________________________

A full briefing of all the above stakeholders is planned for _______________________(date)
at _______________________ (venue).

Event Communications

During the event what form of communication systems will be available/provided/ required for:

Event management: __________________________________________________________

Public address (internal): ______________________________________________________

Public address (external): _____________________________________________________

Emergency services: ___________________________________________________________

Coordination requirements:
___________________________________________________________________________

Event Promotion and Media Management

Can the promotion ticketing and publicity for the event include messages that clarify the focus of the event (for example, family fun, sporting contest, musical entertainment)?

The focus of the event is ______________________________________________________
PROMOTER’S CHECKLIST

The event promotion and publicity will promote:

Safe drinking practices  YES / NO
Don’t drink and drive  YES / NO
Intoxicated and underage persons will not be served alcohol  YES / NO
Bags may be searched or restricted  YES / NO
Glass containers are not permitted  YES / NO
Water will be freely available  YES / NO
Availability of “wet” and “dry” areas  YES / NO
Location of facilities included on ticketing  YES / NO
Health care advice included on ticketing  YES / NO
Smoke free environment  YES / NO

Security

Which type of security will be appropriate for the event? _____________________________

Who will be the appropriate security firm to be contracted? ___________________________

Event security would commence on ____/____/____ and conclude on ____/____/____

What will be the role of security? ________________________________________________

___________________________________________________________________________

Have Police been contacted in relation to security?  YES / NO

If yes, what will be required of the police? ________________________________________

When would a briefing/debriefing be held involving police, security, bar staff and licensing personnel?

_______(Date before Event)  _____(Date after Event)
PROMOTER’S CHECKLIST

Will a briefing of all personnel and officials be provided regarding helping patrons with amenities and services? YES / NO

**Signage**

What signage, including those required under the local liquor laws, will need to be developed and obtained?
___________________________________________________________________________
___________________________________________________________________________
___________________________________________________________________________

Will there be signage in languages other than English? YES / NO

**Transport**

Does a transport strategy need to be developed? YES / NO

List the departments, councils and/or agencies that are likely to be involved in developing this strategy.

Name: __________________________ Organization: ______________________________

Name: __________________________ Organization: ______________________________

Name: __________________________ Organization: ______________________________

Name: __________________________ Organization: ______________________________

**Access and Egress for Patrons**

What provisions can be made for patrons to access, move around and leave the event venue without excessive queuing, or crushes (for example, gate control, pathways, free space)?
___________________________________________________________________________
___________________________________________________________________________
___________________________________________________________________________
___________________________________________________________________________
PROMOTER’S CHECKLIST

Will patrons be able to access toilets, food and bar areas, and entertainment sites without difficulty? YES / NO

In an emergency, will patrons be able to leave the venue or move to other areas within the venue in reasonable safety? YES / NO

Comment:
___________________________________________________________________________
___________________________________________________________________________
___________________________________________________________________________
___________________________________________________________________________

Access for Persons with Disability

What provisions need to be made for persons with a disability to access and move around the event venue?
___________________________________________________________________________
___________________________________________________________________________
___________________________________________________________________________

Will persons with a disability be able to access toilets, food and bar areas, and entertainment sites without difficulty? YES / NO

In an emergency, will persons with a disability be able to leave the venue without significantly impeding the movement of other patrons? YES / NO
Comment:

___________________________________________________________________________
___________________________________________________________________________
___________________________________________________________________________
___________________________________________________________________________
PROMOTER’S CHECKLIST

Noise

What provisions can be made to minimise the level of noise at and around the event?

a) ________________________________________________________________________
b) ________________________________________________________________________
c) ________________________________________________________________________
d) ________________________________________________________________________
e) ________________________________________________________________________

Management of Alcohol

Are there any standard conditions of the Licensing permit? YES / NO

If YES, what are they?
__________________________________________________________________________

How will event personnel, specifically bar and security personnel, be trained and informed of the state and local statutes/ordinances and made aware of the responsibilities and penalties?
__________________________________________________________________________

What types of alcohol (for example beer, wine, and liquor) and other drinks will be available at the event?
__________________________________________________________________________

In what type of containers will alcohol and other drinks be available (for example, glass, can or plastic containers)?
__________________________________________________________________________
PROMOTER'S CHECKLIST

What provisions will be made for the collection of drink containers during and after the event?

__________________________________________________________________________
__________________________________________________________________________

What will be the pricing structure for alcoholic and non-alcoholic drinks?

__________________________________________________________________________

Is it anticipated that the pricing structure will discourage patrons from becoming unduly intoxicated? YES / NO

Can the event publicity, ticketing, and signage inform patrons of the restrictions on alcohol including that alcohol will not be served to minors and intoxicated people? YES / NO

Can some, if not all, bars be shut prior to the end of the entertainment? YES / NO

If the event is “Bring Your Own Bottle” BYO, what provisions can be made to prevent glass related injuries, underage drinking and excessive intoxication?

__________________________________________________________________________
__________________________________________________________________________

If the event is not BYO, what provisions can be made to prevent alcohol from being brought into the venue?

__________________________________________________________________________
__________________________________________________________________________
__________________________________________________________________________

If there are to be designated drinking areas, will they be adequate in size and number and supported by toilet facilities to cope with the expected size of the crowd? YES / NO

Will there be dry areas for families, entertainment, and food? YES / NO

Will the event provide the following facilities to encourage responsible drinking by patrons?

  Free drinking water YES / NO
  Cheap non-alcoholic drinks YES / NO
PROMOTER’S CHECKLIST

Range of quality food YES / NO
Shade or cover YES / NO
Safe drinking information YES / NO
Quality entertainment YES / NO
“Wet” and “Dry” areas YES / NO

Other Drug Use

Is it possible that drugs, including marijuana and amphetamines, may be available and used at this event? YES / NO

List any drugs and related information known from previous experience:
__________________________________________________________________________
__________________________________________________________________________
__________________________________________________________________________

What provisions can be made to address this drug use?
__________________________________________________________________________
__________________________________________________________________________
__________________________________________________________________________

Medical

What level of medical service is considered necessary and for what duration?
__________________________________________________________________________
__________________________________________________________________________
__________________________________________________________________________

Who can provide this service? ________________________________________________

What will be the cost of the service? ___________________________________________
PROMOTER’S CHECKLIST

If it is not a local provider, what arrangements have been made to coordinate with the local ambulance service?

___________________________________________________________________________

What facilities will the medical service require (including helipad)?

___________________________________________________________________________

How can these be provided? _____________________________________________

Animals
If the event involves animals, what arrangements will be necessary for their management, care and well being?

___________________________________________________________________________

___________________________________________________________________________

___________________________________________________________________________

___________________________________________________________________________

___________________________________________________________________________

If the event may affect animals, what arrangements will be necessary for their management, care and well being?

___________________________________________________________________________

___________________________________________________________________________

Animals, forests, pollens, pests, flora, fauna, historical: ___________________________

Technological

Utility lines, noise, lighting, access and egress: _________________________________

Human

Alcohol, hysteria, nuisance, neighbors, fire: _________________________________

Event

Pyrotechnics, lasers: __________________________________________________________
APPROVING AUTHORITY CHECKLIST

Access/Egress—Parking

Is road access and egress suitable?       YES / NO
Is road access and egress suitable in all weather?       YES / NO
Is road access and egress adequate?       YES / NO
Will special traffic control be required?       YES / NO
Is sufficient suitable off road parking available?       YES / NO
Will emergency services have continual access and egress?       YES / NO
In the event of a major emergency, does access and egress allow for emergency services?       YES / NO

Food
See Tabs 14 and 15.

Toilets

What is the anticipated crowd mix of male and female attendees?

_____ MALE       _____ FEMALE

What is the fixed toilet facility numbers?

_____ MALE TOILETS
_____ URINALS
_____ MALE SHOWERS
_____ FEMALE TOILETS
_____ FEMALE SHOWERS
_____ DISABLED

Will separate toilet facilities be available for food vendors?       YES / NO
Will separate toilet facilities be available for medical attendants?       YES / NO
**APPROVING AUTHORITY CHECKLIST**

Are there sufficient toilet facilities?  

YES / NO

If no, what additional requirements?  

_____ MALE TOILETS  

_____ URINALS  

_____ MALE SHOWERS  

_____ FEMALE TOILETS  

_____ FEMALE SHOWERS  

_____ DISABLED

Will current sewerage system cope with the extra demand?  

YES / NO

If no, what additional requirements will there be?

____________________________________________________________________  

____________________________________________________________________

Where additional requirements are unserviced, can service trucks gain easy access?  

YES / NO

What servicing of toilets will be provided during the event?  

____________________________________________________________________  

____________________________________________________________________  

____________________________________________________________________

What, if any, plumbing maintenance will be available onsite?  

____________________________________________________________________  

____________________________________________________________________

**Garbage and Waste Removal**

Number of garbage bins available  

_____ Public Use  

_____ Food Outlet Use  

_____ Medical Facility Use
APPROVING AUTHORITY CHECKLIST

Type of garbage bins (including for sharps, wet, dry, hazardous): _________________
___________________________________________________________________________
___________________________________________________________________________

Program for emptying garbage bins: ____________________________________________
___________________________________________________________________________

Program for removal of site garbage: __________________________________________

Is the food to be prepared or stored in premises other than the temporary food premises or vehicle? YES / NO

If yes, please state the address: ____________________________________________

Will food be delivered to the site by a separate supplier? YES / NO

If yes, what arrangements will be made for receipt of those goods? ________________

__________________________________________
Have you or any of your staff completed a food handler hygiene course?  YES / NO

If yes, when and where: ______________________________________________________

________________________________________________________________________

Vendor’s Name: ____________________________________

Date: ____________________________________________

Venue: ___________________________________________
TAB 14: CATERING CHECKLIST FOR FOOD VENDORS

The establishment of a temporary catering facility can mean working in less than ideal conditions. The following checklist will provide guidance on minimum requirements for this type of event catering.

Setting Up

Food service operation is licensed or registered in accordance with state requirements. YES / NO

The appropriate permit has been obtained from the local authority where the event is to be held. YES / NO

The area for which the permit is valid is clear, that is, where can I set up? YES / NO

Staff Training

Staff are trained in food handling and food safety. YES / NO

Staff has been instructed on machinery operation, food preparation routines and occupational health and safety matters. YES / NO

There are clear guidelines for staff about what to do if problems occur (who to contact and appropriate contact numbers). YES / NO

Food Handling

All food handlers carry out hand washing thoroughly and regularly, particularly:

Before commencing work and after every break YES / NO

After visiting the toilet YES / NO

After handling raw food YES / NO

After using a handkerchief or tissue or touching nose, hair or mouth YES / NO

After handling trash YES / NO

After smoking YES / NO

Correct food temperatures can be, and are, maintained. YES / NO

Food is cooled rapidly under refrigeration in trays not more than 4 inches deep. YES / NO
CATERING CHECKLIST FOR FOOD VENDORS

Tongs are provided and used where possible for food handling.  
Gloves, if used, are changed regularly.  
Food is thoroughly cooked.  
Food is protected from dust, insect pests, and other contaminating matter.  
Staff wear suitable, clean clothing and have long hair tied back.  
Food on display on counters is protected from contamination from the public by use of covers or guards.  
Condiment area is checked and cleaned regularly.

Food Storage

Sufficient refrigeration space is provided to cope with peak demand.  
Refrigerated storage temperatures can be maintained during peak loads.  
Raw foods are stored below cooked or ready to eat foods.  
Food containers are covered.  
Frozen food is thawed on the bottom shelf in the refrigerator or under cold running water.  
Dry food storage space is adequate for peak loads.  
Dry foods are protected from dust and insect pests and rodents at all times.  
Hot food storage is above 127º F.  
Cold food storage is below 10º F.

Food Transport

Transport times are kept to a minimum.  
Food temperatures are met at all times during transport.  
All foods are protected from dust, pests, chemicals, and other contaminating matter.
CATERING CHECKLIST FOR FOOD VENDORS

Cleaning and Sanitizing

Cleaning cloths are replaced frequently.  

YES / NO

Equipment and surfaces used for the preparation of raw foods are cleaned and sanitized before further use.  

YES / NO

Sanitizers are appropriate for use in the food industry and are used in accordance with the manufacturers’ directions.  

YES / NO

Packaging and Labeling

All prepackaged foods are labeled in accordance with United States Standards Code.  

YES / NO

Waste Management

Waste is removed regularly from food preparation areas.  

YES / NO

Putrescible waste removed from food preparation areas is placed in bins with tight fitting lids.  

YES / NO

Capacity to store sullage waste is adequate or connection to the sewer is maintained without leakage.  

YES / NO

Infectious Diseases

All staff are required to report any gastrointestinal type illness to the supervisor.  

YES / NO

A register of staff illness is kept by the supervisor.  

YES / NO

Staff are not permitted to work while they have symptoms of gastrointestinal illness or in the acute stage of a cold or flu-like illness.  

YES / NO

Safety

The workplace is safe, that is, there are no trip hazards, no unprotected hot zones, and no unguarded equipment.  

YES / NO

Fire precautions are followed and fire safety devices are to the satisfaction of the fire authority.  

YES / NO

Food handlers have contact details for all necessary personnel in case of problems occurring.  

YES / NO
## Job Aids

### CATERING CHECKLIST FOR FOOD VENDORS

A list of appropriate contact details is maintained and accessible.

TAB 15: UTILITIES DEPARTMENT VENUE ASSESSMENT CHECKLIST

Electrical—Ground Fault Interrupter and National Electrical Code (NEC) Standards

☐ Back-up generator with fuel supply
☐ Emergency lighting and exit signs
☐ Clearly marked distribution and disconnect
☐ Key personnel ID (photo and briefing)
☐ System security
☐ Alternate electrical sources

Alternative Fuels

☐ Valves and emergency shutoff
☐ Pilotless ignition

Isolation of Subsections of System

☐ Hood
☐ Carbon monoxide (CO) monitors
☐ Waste oil storage
☐ No interior storage of, or use of, unapproved systems

HVAC

☐ HVAC engineer on duty
☐ Reversible system?
☐ Back-up power for system

Telecommunications—E-911

☐ Emergency system access (coded)

UPS

☐ Adequate number of lines, with locations clearly marked
☐ Amplified receivers (ADA)
☐ System priority lines
Water

- Fire water system – Fire Department Connection (FDC)
- System grid established
- Potable water – locations, security, markings identified

Sanitary Sewer

- Adequacy
- Pre-event inspection
- Potty parity (see Job aid manual)
- Portable units, as needed, with servicing established
TAB 16: PUBLIC WORKS DEPARTMENT CHECKLIST

Street / Drainage Division

- Barricades, traffic cones and jersey barriers.
- Transport water tankers as necessary.
- Assure sidewalks are clean and in safe condition.

Traffic Engineering Operations Division

- Review the traffic event management plan submitted by the event manager.
- Coordinate with the Police Department the traffic flow patterns.
- Timing of signals changes to maximize traffic flow.
- Regional traffic management plan.

Animal Control Division

- Back up program to respond to the event as necessary.

Solid Waste Management Division

- Collection of site debris.
- Sweeping of site and adjacent roadways.
- Litter control and disposal.
- Coordination with the Health Department concerning debris removal and food serving areas.

Parking Operations / Enforcement Division

- Review parking program and offer assistance.
- Coordinate with mass transportation organization of pick up point parking.

Engineering Division

- Coordinate with organizations involved in the event to review the site and the lay out of the various program.
- Work with the Building Inspections Division to coordinate the planning for the event.

Regional Mass Transportation Division

- Establish timely schedules for shuttles.
- Review the fees and charges for providing services.
Forestry / Horticulture Division

☐ Protect the landscaping in year round planter areas for public damage.
☐ Inspect trees and large shrubbery for trimming to respond to event security and the public welfare of the guest at the event.

Parks and Recreation Division

☐ Schedule personnel to support activities in the event area.
☐ Work with vendors in supplying the needed support for the event.
☐ Arrange for special events coordination with the children’s area.

TAB 22: IDENTIFYING YOUR JURISDICTION'S VULNERABILITIES
(see hazard analysis section in chapter 2)

Recording the Information

<table>
<thead>
<tr>
<th>HAZARD PROFILE WORKSHEET</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Hazard</strong></td>
</tr>
<tr>
<td><strong>Potential Magnitude</strong></td>
</tr>
</tbody>
</table>
| ☐ Catastrophic: Can affect more than 50 percent of the jurisdiction.  
☐ Critical: Can affect between 25 and 50 percent of the jurisdiction.  
☐ Limited: Can affect between 10 and 25 percent of the jurisdiction.  
☐ Negligible: Can affect less than 10 percent of the jurisdiction. |
| **Areas Likely to be Most Affected (by sector)** | |
| | |
| **Probable Duration** | |
| | |
| **Potential Speed of Onset** | |
| ☐ More than 24 hours’ warning probably will be available.  
☐ Between 12 and 24 hours’ warning probably will be available.  
☐ Between 6 and 12 hours’ warning will be available.  
☐ Minimal (or no) warning will be available. |
| **Existing Warning Systems** | |
| | |
| **Complete Vulnerability Analysis?**  YES/NO |

* Note that some hazards may pose such a limited threat to the jurisdiction that additional analysis is not necessary.
Ranking the Hazards
Based on a review of the Hazard Profile Worksheet, it may be possible to eliminate certain hazards from consideration as threats that require a potential response. Focusing the list of hazards under consideration at this point will make the overall hazard analysis easier to complete.

A sample Hazard Rating Worksheet format is shown below.

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>0 = None</td>
<td>0 = None</td>
<td>0 = None</td>
<td>0 = None</td>
<td></td>
</tr>
<tr>
<td>1 = Rare</td>
<td>1 = Rare</td>
<td>1 = Rare</td>
<td>1 = Rare</td>
<td></td>
</tr>
<tr>
<td>2 = Occasional</td>
<td>2 = Occasional</td>
<td>2 = Occasional</td>
<td>2 = Occasional</td>
<td></td>
</tr>
<tr>
<td>3 = Frequent</td>
<td>3 = Frequent</td>
<td>3 = Frequent</td>
<td>3 = Frequent</td>
<td></td>
</tr>
</tbody>
</table>
Assigning Severity Ratings
The planning team should use historical and analytical data to assign a severity rating to each type of hazard. The severity ratings selected should quantify, to the degree possible, the damage to be expected in the jurisdiction as a result of a specific hazard. An example of severity ratings is shown in the table below.

<table>
<thead>
<tr>
<th>Level of Severity</th>
<th>Characteristics</th>
</tr>
</thead>
<tbody>
<tr>
<td>Catastrophic</td>
<td>Multiple deaths. Complete shutdown of critical facilities for 30 days or more. More than 50 percent of property is severely damaged.</td>
</tr>
<tr>
<td>Critical</td>
<td>Injuries and/or illnesses result in permanent disability. Complete shutdown of critical facilities for at least 2 weeks. More than 25 percent of property is severely damaged.</td>
</tr>
<tr>
<td>Limited</td>
<td>Injuries and/or illnesses do not result in permanent disability. Complete shutdown of critical facilities for more than 1 week. More than 10 percent of property is severely damaged.</td>
</tr>
<tr>
<td>Negligible</td>
<td>Injuries and/or illnesses are treatable with first aid. Minor quality of life lost. Shutdown of critical facilities and services for 24 hours or less. No more than 1 percent of property is severely damaged.</td>
</tr>
</tbody>
</table>
Creating Frequency Distributions
After assigning a severity rating, the planning team should create a frequency distribution for each type of hazard. A frequency distribution categorizes the jurisdiction’s exposure to each hazard (that is, the likelihood of occurrence for each type of hazard). Exposure can be assessed in terms of cycles, hours, or years. An example of exposure expressed in terms of years is shown in the table below.

<table>
<thead>
<tr>
<th>Exposure</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Highly likely (H)</td>
<td>The potential for impact is very probable (near 100 percent) in the next year.</td>
</tr>
<tr>
<td>Likely (L)</td>
<td>The potential for impact is between 10 and 100 percent within the next year.</td>
</tr>
<tr>
<td></td>
<td>or</td>
</tr>
<tr>
<td></td>
<td>There is at least one chance of occurrence within the next 10 years.</td>
</tr>
<tr>
<td>Possible (P)</td>
<td>The potential for impact is between 1 and 10 percent within the next year.</td>
</tr>
<tr>
<td></td>
<td>or</td>
</tr>
<tr>
<td></td>
<td>There is at least one chance of occurrence within the next 100 years.</td>
</tr>
<tr>
<td>Unlikely (U)</td>
<td>The potential for impact is less than 1 percent in the next 100 years.</td>
</tr>
</tbody>
</table>

To prioritize the overall potential threat to a jurisdiction, the frequency distribution for each type of hazard should be cross-referenced with the severity rating and characteristics for each type of hazard. When the frequencies of distribution are cross-referenced with the severity ratings, the planning team should have a completed hazard analysis that gives a good picture of hazards that pose the greatest threat to the jurisdiction. Note, however, that after completing the hazard analysis, the planning team might have to take a long view that uses historical data to identify the most costly recent hazard(s) (that is, in terms of lives lost and values of property damage) to focus the planning effort on that hazard.
### TAB 23: LOST CHILD INFORMATION SHEET

Date and time of report: _____________________________________________

Case Number (if needed): _________ Officer Assigned: _______________

Date and time of assignment: _______________________________________

#### Resolution

- [ ] Child was found. Location: ______________ By whom: ____________
- [ ] Parent left and did not return to CP after being advised to stay.
- [ ] Child was not found. Report was filed. Complaint number: ____________

#### Information About the Child

- Name: __________________________________________________________________
- Address: __________________________________________________________________
- DOB: __________________________ Phone Number: ________________

#### Description of Child

- Height: _______ Weight: _______ Hair Color: _______ Eye Color: _______
- Clothing: __________________________________________________________________

- Unique physical features: __________________________________________________________________

- Other individuals with missing child: __________________________________________________________________

#### Parental Information

- Name: __________________________________________________________________
- Address: __________________________________________________________________
- Phone Number: ___________ DOB: ______________
- Social Security #: ______________
TAB 24: GASTROINTESTINAL ILLNESS QUESTIONNAIRE
(For use at first aid posts during gatherings)

Date: _____/_____/_____
Interviewed by: __________________________

Name: _____________________________________________________________

Address: ___________________________________________________________

Phone Number: ___________________________

Symptoms: What symptoms have you had?

Diarrhea YES / NO
Nausea YES / NO
Vomiting YES / NO
Abdominal cramps YES / NO
Headache YES / NO
Fever YES / NO
Blood in feces YES / NO
Joint or muscle aches YES / NO

Other: _____________________________________________________________

When did the symptoms first start?

Date: _____/_____/_____
Time: ______ a.m./p.m.

Do you know of others who have been ill with similar symptoms? YES / NO

(Include names and contact details for others for further follow-up on reverse side of form.)

What have you eaten since being at this event and where was it purchased or obtained from?
(List the food history reverse side of the form, include all food, drinks, confectionery and any other snacks. It is important to list where the food was obtained from.)

Have you been swimming since being at this event?

<table>
<thead>
<tr>
<th></th>
<th>YES / NO</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pool</td>
<td></td>
</tr>
<tr>
<td>Spa</td>
<td></td>
</tr>
<tr>
<td>River</td>
<td></td>
</tr>
<tr>
<td>Lake</td>
<td></td>
</tr>
</tbody>
</table>

Other: __________________________________________________________________

Do you suspect anything, which may have caused your illness? YES / NO

Explain:

________________________________________________________________________
________________________________________________________________________

**NOTE:** Keep this form for review or collection by the supervisor or public health official. Report anything suspicious or, if several cases, similar illness within a short period of time. Provide report to local emergency rooms and those in surrounding communities for statistical analysis and distribution.
TAB 25: GUIDE FOR THE PROVISION OF FIRST AID

The number of first aid personnel and posts will vary with the type of event. As a guide, use the following formulation:

<table>
<thead>
<tr>
<th>Patrons</th>
<th>First Aid Personnel</th>
<th>First Aid Posts</th>
</tr>
</thead>
<tbody>
<tr>
<td>500</td>
<td>2</td>
<td>1</td>
</tr>
<tr>
<td>1000</td>
<td>4</td>
<td>1</td>
</tr>
<tr>
<td>2000</td>
<td>6</td>
<td>1</td>
</tr>
<tr>
<td>5000</td>
<td>8</td>
<td>2</td>
</tr>
<tr>
<td>10000</td>
<td>12</td>
<td>2</td>
</tr>
<tr>
<td>20000</td>
<td>22+</td>
<td>4</td>
</tr>
</tbody>
</table>

The number of first aid posts required would depend on what first aid room facilities are available. Every venue should have at least one climate controlled facility with electrical service and running potable water.

First aid providers are generally not required for events smaller than 500 patrons and which are held in close proximity to central ambulance/hospital services.

**First Aid Posts**

These should be conspicuous and identified by an illuminated sign at night. Ideal locations are near the main entrance, and for large concerts, provision should be made behind the stage barrier.

**Casualties**

Experience from other events has shown that most casualties are from:

- Heat-stroke, dehydration;
- Cuts from broken glass and drink can ring pulls;
- Injuries from missiles, usually bottles and cans;
- Fainting and exhaustion from a combination of hysteria, heat and alcohol, and at concerts, this often occurs at or near the stage barrier;
- Trampling or crushing from crowd pressure;
- Crowd “surfing” and stage diving;
- Illicit drug and alcohol abuse;
- Respiratory problems (asthma and emphysema)
- Epilepsy attacks brought about from strobe lighting; and
- Age-related illness.

</table>
TAB 27: ICS FORM 201 – INCIDENT BRIEFING

Purpose: The Incident Briefing form provides the Incident Commander (and the Command and General Staffs assuming command of the incident) with basic information regarding the incident situation and the resources allocated to the incident. It also serves as a permanent record of the initial response to the incident.

Preparation: The briefing is prepared by the Incident Commander for presentation to the incoming Incident Commander along with a more detailed oral briefing. Proper symbology should be used when preparing a map of the incident.

Distribution: After the initial briefing of the Incident Commander and General Staff members, the Incident Briefing is duplicated and distributed to the Command Staff, Section Chiefs, Branch Directors, Division/Group Supervisors, and appropriate Planning and Logistics Section Unit Leaders. The sketch map and summary of current action portions of the briefing form are given to the Situation Unit while the Current Organization and Resources Summary portion are given to the Resources Unit.

TAB 29: ICS FORM 203—ORGANIZATION ASSIGNMENT LIST

**Purpose:** The Organization Assignment List provides ICS personnel with information on the units that are currently activated and the names of personnel staffing each position or unit. It is used to complete the Incident Organization Chart (ICS Form 207) which is posted on the Incident Command Post display.

**Preparation:** The list is prepared and maintained by the Resources Unit under the direction of the Planning Section Chief.

**Distribution:** The Organization Assignment List is duplicated and attached to the Incident Objectives form and given to all recipients of the Incident Action Plan.

**Instructions for Completing the Organization Assignment List (ICS Form 203)**

ICS 203 PREPARED BY (RESOURCES UNIT)
TAB 30: INCIDENT RADIO COMMUNICATIONS PLAN

Purpose: The Incident Radio Communications Plan provides in one location information on all radio frequency assignments for each operational period. The plan is a summary of information obtained from the Radio Requirements Worksheet (ICS Form 216) and the Radio Frequency Assignment Worksheet (ICS Form 217). Information from the Radio Communications Plan on frequency assignments is normally placed on the appropriate Assignment List (ICS Form 204).

Preparation: The Incident Radio Communications Plan is prepared by the Communications Unit Leader and given to the Planning Section Chief. Detailed instructions on preparing this form may be found in ICS 223-5, Communications Unit Position Manual.

Distribution: The Incident Radio Communications Plan is duplicated and given to all recipients of the Incident Objectives form including the Incident Communications Center. Information from the plan is placed on Assignment Lists.

Instructions for Completing the Incident Radio Communications Plan (ICS Form 205)

TAB 32: ICS FORM 207—INCIDENT ORGANIZATION CHART (ICS FORM 207)

**Purpose:** The Incident Organization Chart is used to indicate what ICS organizational elements are currently activated and the names of personnel staffing each element. The attached chart is an example of the kind of organizational chart used in the ICS. Personnel responsible for managing organizational positions would be listed in each box as appropriate.

**Preparation:** The organization chart is prepared by the Resources Unit and posted along with other displays at the Incident Command Post. A chart is completed for each operational period and updated when organizational changes occur.

**Distribution:** When completed, the chart is posted on the display board located at the Incident Command Post.

**Wall Size Chart:** The ICS 207 WS is a large chart that is primarily used to post on the command post display board for better visibility.

TAB 36: HAZMAT/ B-NICE DATA COLLECTION REPORT

Reported by: ________________________________

Phone Number: ________________________________

Agency or Home Address: ________________________________

Date and Time of Incident: ________________________________

Incident Location and Description

Neighborhood and occupancy: ________________________________

Topography: Urban Rural Suburban

Describe: ________________________________

Population sensitive areas (for example, nursing homes, schools, or hospitals):

Reason for Report

☐ Unusual liquid droplets ☐ People becoming sick

☐ Unusual odors ☐ People dying

☐ Unusual cloud or vapor ☐ Dead/discolored vegetation

☐ Unusual metal debris ☐ Dead/dying or sick animals

☐ Other (describe): ________________________________

Weather

☐ Clear ☐ Cloudy

☐ Misty ☐ Rain

☐ Temperature: ____________ ☐ Snow

☐ Relative humidity: ____________

☐ Other (describe): ________________________________
Wind
Direction (to/from): __________________________________________

Speed (none, mild, gusts, high winds): __________________________

Other (describe): ____________________________________________

Odor
- None
- Irritating
- Garlic/Horseradish
- Sweet
- Pepper
- Fruity
- Changing
- Other (describe): __________________________________________

Visible Emission
- Cloud or Vapor
- Mist
- Smoke
- Liquid
- Other (describe): __________________________________________

Signs and Symptoms
- None
- Tightness in chest
- Dizziness
- Blurred Vision
- Difficulty breathing
- Fever
- Runny nose
- Stinging of skin
- Reddening of skin
- Welts/blisters
- Nausea/Vomiting
- Choking
- Diarrhea
- Other (describe): __________________________________________
Date and Time of Onset: ____________________________________________

Duration of Symptom(s): ____________________________________________

Number of Casualties: ____________________________________________

**Expllosion/Fires**

- None
- Structure
- Air
- Underground
- Ground
- Other (describe): __________________________________________________

Describe device: _____________________________________________________

Describe container / condition / size: ________________________________

Describe location where device was found: ____________________________

Describe structures involved / estimated damage: _________________________

___________________________________________________________________________

Report filed by:

Federal Chemical/Biological Hotline: (800) 424-8802
TAB 37: RESPONSE GUIDE TO WMD TERRORIST INCIDENTS

Provided by the New Jersey State Police

Types of Threats

1. **Biological**—living organisms, or the materials derived from them, that cause disease and sickness in humans.
2. **Nuclear**—includes the application of a conventional nuclear device or the inclusion of radioactive materials as part of a “dispersal” type device.
3. **Incendiary**—any mechanical, electrical or chemical device used to intentionally initiate combustion.
4. **Chemical**—compounds which, through their chemical properties, produce lethal or damaging effects to people, animals, plants or materials.
5. **Explosive**—any substance, mixture, item or device designed to function by the instantaneous release of gas and heat usually accompanied by light, loud report, and possibly a shock wave.

Basic Response Methodology

1. Protect yourself / use a safe approach;
2. Identify and recognize the hazard;
3. Isolate the area / secure the scene; and
4. Set up command / request additional help.

*Remember: Unsubstantiated rumors or opinions can generate panic.*

Key to Self-Preservation

1. **Time**—Minimize any exposure time.
2. **Distance**—Maximize the distance between yourself and the item that is likely to cause harm.
3. **Shielding**—Use cover as protection. Wear appropriate personal protective equipment and respiratory protection if possible.

Crime Scene Procedure

1. Be aware of people arriving or departing the scene. Note license numbers and other descriptive information.
2. Advise witnesses and bystanders to remain at the scene in a *safe* location until law enforcement personnel can interview them.
3. Be alert to physical evidence, such as footprints, wrappers, or matches, and notify authorities of such findings.
4. If possible, sketch, photograph, or videotape the scene.
5. Document victims’ statements and any other evidence they may possess.
6. Use evidence-saving techniques whenever possible (for example, fog spray or containment).
**Golden Rule**

Do not touch, disturb, or remove anything without the knowledge and approval of law enforcement.

<td>Radiological, thermal, chemical, mechanical, ambush</td>
<td>Guide #163. Improvised materials may be extremely sensitive, reactive &amp; unpredictable</td>
<td>All of the above apply</td>
</tr>
</tbody>
</table>
## SCENE MANAGEMENT

| Park vehicles and position responders upwind/upgrade and not to close. |
| Establish an isolation distance (hot zone) and prohibit traffic from passing through the incident. This distance will depend on the types of hazards and the location of the incident. In explosive incidents, emphasize the possibility of secondary devices. |
| Immediately notify your agency dispatcher that you are involved in a possible terrorist incident and establish the incident command system. |
| Do not remain in the path of a vapor cloud or leaking materials. Be alert to signs of escaping materials or agents. Note sounds of escaping gas, odd smells, etc. |
| Provide your dispatcher with the following information: |
| The incident is a crime scene. Preserve suspected evidence wherever possible. |
| a) incident description |
| b) exact location of incident |
| c) location of command, i.e., Main Street Federal Building Command |
| d) type or types of structure involved |
| e) type or types of vehicles involved |
| f) type of substance(s) released or involved |
| g) presence of fire, spilled liquids, vapor leaks |
| h) known injuries or causalities |
| i) alert hospitals to imminent mass injuries (many may arrive in their own car) |
| j) public evacuations? How much public exposure? |
| k) Request necessary resources immediately: DEP/bomb squad/HAZMAT unit/urban search & rescue/medical teams/etc. |
| l) Route of approach for other responders, i.e., wind direction |
| Use the D.E.C.I.D.E. process: |
| D - detect the presence of a terroristic incident |
| E - estimate likely harm without intervention |
| C - choose the response objectives (terroristic incidents require assistance from other agencies) |
| I - identify the action options (based on your training and personal protective equipment) |
| D - do the best option |
| E - evaluate your progress |

## EMERGENCY SELF-DECONTAMINATION

<table>
<thead>
<tr>
<th>(1) Blot off the agent</th>
<th>(3) Flush the affected area with large amounts of water</th>
</tr>
</thead>
<tbody>
<tr>
<td>(2) Strip off all the clothing</td>
<td>(4) Cover the affected area</td>
</tr>
</tbody>
</table>
TAB 38: ALCOHOL, FIREARMS, AND TOBACCO (ATF) AGENCY
BOMB THREAT CHECKLIST

Place by each telephone. Duplicate as necessary.

Exact date and time of call: ______________________________________________________

Exact words of caller: __________________________________________________________________
_________________________________________________________________________________

Questions to ask

1. When is the bomb going to explode? _______________________________________________

2. Where is the bomb? _______________________________________________________________

3. What does it look like? ___________________________________________________________

4. What kind of bomb is it? _________________________________________________________

5. What will cause it to explode? ____________________________________________________

6. Did you place the bomb? __________________________________________________________________

7. Why? ____________________________________________________________________________

8. Where are you calling from? _______________________________________________________

9. What is your address? __________________________________________________________________

10. What is your name? __________________________________________________________________

Caller’s Voice (Please circle appropriate terms.)

- calm
- disguised
- nasal
- angry
- broken
- slow
- sincere
- lispt
- rapid
- giggling
- deep
- crying
- squeaky
- excited
- stressed
- accent
- loud
- slurrd
- normal

If voice is familiar, whom did it sound like? __________________________________________________________________

Were there any background noises? __________________________________________________________________

Remarks: ____________________________________________________________________________

Person receiving call: __________________________________________________________________

Telephone number where call was received: ____________________________________________

Report call immediately to: __________________________________________________________________

(Refer to bomb incident plan.)
TAB 39: FIRST RESPONSE TO A TERRORIST INCIDENT

The following are some guidelines developed by the Pennsylvania Emergency Management Agency for responders on the scene of a terrorist incident.

The Ten “Ates”
1. **Evacuate** the area as quickly and safely as possible.
2. **Isolate** the site to restrict access by all personnel.
3. **Hesitate**, Fools Rush In. Don’t be one. Do not enter the scene until you-
4. **Evaluate** the situation and your potential response actions.
5. **Communicate** your conclusions and call for assistance as necessary (because of bomb danger, use NO radios or cellular phones closer than 300 yards). Notify hospitals as appropriate.
6. **Infiltrate** Go in carefully, only when it’s time to do so.
7. **Procrastinate** Take no action until it is as safe as possible, and necessary.
8. **Investigate** Remember, this is a crime scene. Do not exceed your authority but support and assist the investigation as appropriate.
9. **Cooperate** with other responders (teamwork!) and with those in charge.
10. **Decontaminate** and clean up carefully to avoid accidental removal of evidence and to avoid endangering others.

Golden Rule for First Responders
Do not touch anything at a crime scene or remove anything from a crime scene unless 1) it is absolutely necessary for the performance of your official duties, or 2) it is done with the concurrence of the appropriate law enforcement personnel.

REMEMBER
THIS IS A CRIME SCENE. It is the scene of a deliberately violent and lethal act. THERE MAY BE MORE ACTS.

Words to Live By

- Do not create more casualties “rescuing” the dead.
- Life safety -- of 1) responders and 2) victims -- is first priority.
- Second priority is preservations of evidence.
- Examine victims for injuries and weapons. A perpetrator may have been injured, too.
Job Aids

Chemical Incident

- Approach from upwind if possible.
- Use personal protective equipment.
- Stay clear of spills, vapors, fumes, and smoke.
- Exclusion zone: 1,500 feet.
- Use fog streams instead of solid streams where possible to preserve evidence.
- Contain runoff where possible.
- Cover all entries with charged lines to prevent flare-ups.

Bomb

- Assume there are more! Responders may be terrorist targets, too.
- Establish 300 yard exclusion zone.
- Do not use radios or cellular phones within 300 yards of the site.
- Remove the injured as quickly and carefully as possible; leave the dead for coroners.

Biological/Nerve Agents

- Watch for numbers of people or animals exhibiting similar symptoms of illness.
- Watch for human or animal remains with no apparent trauma.
- IMMEDIATELY don respirator and leave area if situation is suspicious.

Nuclear/Radiological

- Not detectable without monitoring equipment.
- Distance is best immediate protection; enforce bomb exclusion zone.
- Remember: “Time, Distance, Shielding.”
